Supplemental Figure 1.

**Fig. S1.** SAXS spectra for SUVs alone. To facilitate visualization, spectra have been manually offset in the vertical direction by scaling each trace by a multiplicative factor.
Supplemental Figure 2.

**Fig. S2.** Protein-only SAXS spectra for all proteins tested in this study. To facilitate visualization, spectra have been manually offset in the vertical direction by scaling each trace by a multiplicative factor.
Supplemental Figure 3.

**Fig. S3.** SAXS spectra for XCL1 structural variants incubated with model mammalian cell membranes (DOPS/DOPE/DOPC 20/40/40). To facilitate visualization, spectra have been manually offset in the vertical direction by scaling each trace by a multiplicative factor.
