The Correlation Between Mastery of Vocabulary and Reading Comprehension Students (Case Study SMP Swasta Tenera PTPN IV Kab. Langkat)

Amos Sider Tamboy
Universitas Pendidikan Muhammadiyah Sorong, Kota Sorong, Papua, Indonesia

ABSTRACT

This research deals with the student’s mastery of vocabulary and reading comprehension. It is aimed at finding out whether there is a high correlation between the mastery of vocabulary and reading comprehension. In this research the population was taken students of SMP Swasta Tenera PTPN IV Kab. Langkat. The total number of the samples was 20 students. After the data had been collected, the writer analyzed the data by using the formula of Pearson Product Moment. After calculating the correlation of mastery vocabulary and reading comprehension test, it was obtained that the correlation coefficient was 0.57. It means that there is a high correlation between mastery of vocabulary and reading comprehension. It implies that the higher the student’s mastery on vocabulary, the better they can comprehend the reading texts.

INTRODUCTION

Reading is one of the most important skills in learning language besides listening, speaking, and writing. It is necessary to support all the subjects which are learned. Reading in English today is very important to get information. The development of science and technology is still written down the text form.

The development of science and technology compels us to learn English well. Most of textbooks, and other sources of information available are printed in English. It will be easier for us to get the information if one knows English.

In order to achieve these aims they must master a number of vocabularies, he cannot communicate his idea as clearly as possible without mastering much more vocabulary, cannot grasp the ideas transmitted to another, read the columns of newspaper or popular magazines or even understand new casts on the radio or television. In addition, listening comprehension, writing ability and reading ability can be hampered by limited vocabulary. Therefore, mastering vocabulary plays a very important role in enabling someone to communicate in one language.
As the first foreign language in Indonesia, English has been taught from secondary level of education up to tertiary level of schools. It is also taught to the third year pupils of primary school. There are four skills that should be achieved, namely, listening, speaking, reading, and writing. As English is learned from secondary level, it is expected that the students will be able to use English at least in simple oral and written communication and they are expected to have basic knowledge, which can be used for their further studies.

Based on some researches conducted by students of English Department at STKIP Pelita Bangsa Binjai, most Junior High School students find it difficult to express their ideas, feelings, thoughts, and intensions through reading in English.

In terms of goal of teaching, reading skill is the skill, which is very important. Reading is the skill that cannot be lack of attention in Teaching English. The students are afraid that they are incapable of reading comprehension in the language.

The development of vocabulary, which is very fast, must be supported by mastering vocabulary in order to be able to communicate well. The lack of vocabulary makes someone have difficulty in following or understanding a comprehension, so, mastering vocabulary is very important to the students. The most effective way of adding our vocabulary is by studying vocabulary and several new idioms in its context. However, it seems that there are still several techniques, which are available to develop our vocabulary as by using a dictionary.

The role mastering of vocabulary can reflect the degree of our intellectual capacity. The higher the level of vocabulary is the higher our level of intellectual become. The relation between the mastery of vocabulary and the other aspects such as reading, listening, and writing is very important to the students especially in teaching learning process.

In reading without having good mastery of vocabulary, the students are not able to read well. Reading is one way of reaching information. By reading, the students will be more active and creative to use language and enrich or to enlarge their vocabulary.

The achieve this goal, it demands the ability of teachers because English is a foreign language in our country. But as all people know that both the pronunciation and reading of English are quite different from one another. There are many problems faced by students because of the lack of vocabulary, the structures of sentences and their incapability to tell their ideas in reading. Students are not able to read about what they see in their daily life because they are incapable of connecting one idea to another in reading comprehension.

Thus, vocabulary mastery influences the ability to reading in order to determine how far vocabulary mastery is related to the ability in reading.

**METHODOLOGY RESEARCH**

**The Method of the Research**

The writer conducted correlation research in writing this thesis. This kind of research was conducted in order to find out where there is a high correlation between mastery of vocabulary and reading comprehension.

**The Population and Sample**

The population of the study was the 2012/2013 academic year students at SMP Swasta Tenera PTPN IV Kab. Langkat. There were was 264 students. It was hard enough and time consumed to organize a lot of students. He limited the number of students by taking 10% persons out of 264 students as the sample.

Random sampling technique was applied in this research to take the sample. The reasons for taking the number of samples based on Arikunto’s idea (1991 : 1670 that : “If the sample consists of a large number, the sample can be taken from 10% - 15% or 20% - 25%”.)
Instrument of Research
The instruments used for collecting the data were mastery of vocabulary and reading comprehension test. The multiple choice tests were used to obtain the data of vocabulary mastery and reading comprehension.

The test for vocabulary consists of 50 items and reading comprehension 30 items, which are based on the 2011 curriculum. The tests were teacher made test. The students were supposed to choose the correct answer from the options prepare in every vocabulary and reading comprehension problems.

In vocabulary scoring, the writer determines the communicative score ranging from 0–100. The test consists of 50 items and each items is scored 2 (two). If a students can answer of the items correctly, he gets 100.

In reading scoring, the communicative score ranging from 0 – 100. The test consists of 20 items and each item is scored 5 and if students can answer all of the item correctly, he gets 100.

RESULTS AND DISCUSSION
The Description of the Data
The data obtained in vocabulary and reading comprehension were showed in the following tables. The data of each were separated in order to make easy to understand.

| No | Score vocabulary Mastery |
|----|--------------------------|
| 1  | 70                       |
| 2  | 82                       |
| 3  | 70                       |
| 4  | 76                       |
| 5  | 88                       |
| 6  | 60                       |
| 7  | 76                       |
| 8  | 74                       |
| 9  | 90                       |
| 10 | 92                       |
| 11 | 78                       |
| 12 | 76                       |
| 13 | 76                       |
| 14 | 80                       |
| 15 | 80                       |
| 16 | 62                       |
| 17 | 62                       |
| 18 | 72                       |
| 19 | 72                       |
| 20 | 76                       |
| 21 | 74                       |
| 22 | 74                       |
| 23 | 74                       |
| 24 | 72                       |
| 25 | 74                       |
| 26 | 68                       |
| 27 | 72                       |

The Correlation Between Mastery of Vocabulary and Reading Comprehension Students ...., Amos Sider Tamboy
The Data of Reading Comprehension

Table 4.
The Data of Reading Comprehension

| No. | Score |
|-----|-------|
| 1   | 90    |
| 2   | 75    |
| 3   | 95    |
| 4   | 90    |
| 5   | 75    |
| 6   | 85    |
| 7   | 90    |
| 8   | 90    |
| 9   | 100   |
| 10  | 100   |
| 11  | 95    |
| 12  | 95    |
| 13  | 95    |
| 14  | 90    |
| 15  | 90    |
| 16  | 85    |
| 17  | 85    |
| 18  | 90    |
| 19  | 80    |
| 20  | 90    |
| 21  | 90    |
| 22  | 90    |
| 23  | 95    |
| 24  | 95    |
| 25  | 90    |
| 26  | 75    |
| 27  | 85    |

The Data Analysis

In order to find out the correlation coefficient of mastery of vocabulary and reading comprehension, he performed correlation formula as in the following section:

Table 5.
The Data of Vocabulary Mastery (X) and Reading (Y)

| Samples | X  | Y  | X^2 | Y^2 | XY  |
|---------|----|----|-----|-----|-----|
| 1       | 70 | 90 | 4900| 8100| 6300|
| 2       | 82 | 85 | 6724| 7225| 6970|
| 3       | 70 | 95 | 4900| 9025| 6650|
| 4       | 76 | 90 | 5776| 8100| 6840|
| 5       | 88 | 90 | 7744| 8100| 7920|
| 6       | 60 | 85 | 3600| 7225| 5100|
| 7       | 76 | 90 | 5776| 8100| 6840|
| 8       | 74 | 90 | 5476| 8100| 6660|
| 9       | 90 | 100| 8100|10000|9000|
| 10      | 92 | 100| 8464|10000|9200|
| 11      | 78 | 95 | 6084| 9025| 7410|
| 12      | 76 | 95 | 5776| 9025| 7220|
| 13      | 76 | 95 | 5776| 9025| 7220|
To find out the correlation coefficient, the Pearson Product Momen formula is used:

\[
R = \frac{n \sum XY - (\sum X)(\sum Y)}{\sqrt{\left(n \sum X^2 - (\sum X)^2\right)\left(n \sum Y^2 - (\sum Y)^2\right)}}
\]

In which:

\[
\begin{align*}
\Sigma X &= 2020 \\
\Sigma X^2 &= 152624 \\
\Sigma Y &= 2430 \\
\Sigma Y^2 &= 219500 \\
\Sigma XY &= 182420 \\
R &= \frac{27(182420) - (2020)(2430)}{\sqrt{[27(152624) - (2020)^2][27(219500) - (2430)^2]}} \\
R &= \frac{19740}{\sqrt{(40448)(21600)}} \\
R &= 0.57
\end{align*}
\]

Having computed the data, he found out that correlation coefficient was 0.57. It means that there is a high correlation Arief Furchan (1982), between mastering vocabulary and reading comprehension for the students who are learning English. It implies that the more students have better mastery vocabulary to comprehend the text.

**CONCLUSION**

After analyzing the data on the previous chapter, conclusion can be drawn such as: many factors that could be considered when some one is going to read a text. One of them is the mastery of vocabulary. There is a high correlation between the mastery of vocabulary and reading comprehension. The more students possess the vocabulary the easier for them to comprehend the text.
