Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.
On the Cover: Autopsy studies reveal the localization of the Middle East respiratory syndrome (MERS) coronavirus (MERS-CoV) receptor dipeptidyl peptidase 4 (DPP4, CD26) in human lungs, identifying the pulmonary cell types that may be susceptible to infection. DPP4 expression (brown staining) is shown on alveolar epithelial cells and scattered alveolar macrophages. (See page 78.)
