Altered regulation of ERK1b by MEK1 and PTP-SL and modified Elk1 phosphorylation by ERK1b are caused by abrogation of the regulatory C-terminal sequence of ERKs.

Yuval Yung, Zhong Yao, Daniel M. Aebersold, Tamar Hanoch, and Rony Seger

This article has been withdrawn by the authors. In Fig. 3, the CT, EGF panel contained duplicated features. Several panels shown in Fig. 3 were assembled as a composite. The Elk1 and pERK immunoblots in Fig. 4B were inappropriately manipulated. Because the original data are no longer available, in the interest of maintaining accuracy in the published scientific literature, the authors wish to withdraw this article. However, the authors have full confidence in the findings and conclusions of this paper.
