Abstract. Under the Internet+ operating model. The emergence of new teaching models has broken the traditional teaching methods, and a series of online teaching methods such as the Internet have provided children with newer teaching models. This not only facilitates the way of learning, but also brings more convenience to English teaching, and further promotes the method of English learning. Compared with traditional learning methods, it is more convenient to use the smart terminal mobile learning platform through the Internet. Teaching and other methods provide students with a better platform. Under the influence of smart terminals, such a learning platform can not only provide a diversified learning atmosphere, but also provide students with a better way of thinking, breaking conventions, and pioneering innovation, and further enhance students' interest in learning. And this kind of learning platform is more commonly used in English teaching [1].

Keywords: Intelligent Terminal, Teaching English, Traditional Teaching

1. Introduction
Under the influence of the smart terminal, the smart mobile terminal is shown in Figure 1. The new learning platform provides a broad world for English learning. This will not only break the traditional English classroom, [2] but also find a new education model that is more acceptable to students through the big data model. An intelligent terminal is established for children to learn, and the emergence of intelligent terminals in the English teaching mode first creates a better speaking environment for children. Improve students' interest in learning English. It also further promotes the development of education in our country. Provide a better network platform construction and promote the development of learning platforms under the big data model. Smart terminals use the big data background model that is weaker than the computer model through the network. This can be regarded as a pro that can quickly satisfy the learning psychology of students. It can also further strengthen the computer station to prepare for use in life.
2. English teaching in smart terminal mobile learning platform

2.1. How to use the smart terminal mobile learning platform

Learning platforms built on the rapid phenomenon of smart terminals are more popular. Because this not only satisfies students who can study anywhere, it reduces time and integrates into the classroom more quickly. On the mobile learning platform, Gouxue has created the best network construction for children, and provides students with the best quality learning environment under the background model of computer big data, which satisfies students' ideas that they can learn at home. And this new type of learning model has become the most popular way for people nowadays. It speeds up learning faster and better, and provides a better platform for children to learn and be willing to learn. Under the influence of this kind of intelligent terminal, children can absorb the most comprehensive teaching background on the computer faster, and can also provide the best educational environment and learning atmosphere. Can do the quickest analogy [3].

2.2. Problems in traditional teaching

In the process of English learning under the smart terminal, the traditional teaching method is broken. The new learning environment allows children to be more acceptable and able to receive the best education. It is faster, better and more convenient to practice the online English teaching mode through smart terminals to absorb the big background model of computer big data. English learning under the smart terminal not only improves the efficiency of learning, but also improves the speed of learning. During this period of time when students use the Internet, students can diverge their thinking mode, and it is no longer a traditional rigid teaching method. Further strengthen the learning atmosphere, cultivate a best learning background, and this learning background has become a new type of teaching platform under the intelligent terminal. Through the cooperation of smart terminals, the big data background mode of computers is absorbed. To provide students with the best green Internet environment through the Internet. Enhance students' interest in learning, increase students' thinking development, and improve students' learning ability and learning efficiency [4].
2.3. English learning and teaching under smart terminals
In the process of English learning under the smart terminal, the traditional teaching method is broken. The new learning environment allows children to be more acceptable and able to receive the best education. It is faster, better and more convenient to practice the online English teaching mode through smart terminals to absorb the big background model of computer big data. English learning under the smart terminal not only improves the efficiency of learning, but also improves the speed of learning. During this period of time when students use the Internet, students can diverge their thinking mode, and it is no longer a traditional rigid teaching method. Further strengthen the learning atmosphere, cultivate a best learning background, and this learning background has become a new type of teaching platform under the intelligent terminal. Through the cooperation of smart terminals, the big data background mode of computers is absorbed. To provide students with the best green Internet environment through the Internet. Enhance students' interest in learning, increase students' thinking development, and improve students' learning ability and learning efficiency [5].

3. Smart terminal application

3.1. Application of smart terminal in learning platform
In the current society, the application of smart terminals is more extensive, as shown in Figure 2. Smart terminal processing, through the spread of Internet + technology to continuously improve high-tech talent technology, and the development of China's learning platform under the smart terminal technology, through innovation on the learning platform, etc. A series of ways to increase education on the learning platform, through the improvement of Zhao Yu’s platform and network computer development technology, to create a platform that is most suitable for students to learn. In this case, a series of intelligent terminals are used in the learning platform. Development and changes have also become the current trend of the need to develop learning. The emergence of intelligent terminal learning platforms has broken the traditional traditional teaching mode and improved students’ thinking expansion ability and students' problems in learning. Many students' daily behavior habits, which not only facilitates students' learning, but also improves the application of Internet smart terminals in life more quickly [6].

3.2. How to design a reasonable marketing model
Designing an appropriate marketing model should be based on the requirements of Internet experts through the full cooperation of the big data background to find what customers need. Then make a suitable marketing model. The marketing model can not only meet the needs of customers, but also promote the development of the market. To speed up the adjustment of economic structure, to design a suitable [7] marketing model, we must start from the customers themselves, find the desired fit, and analyze the big data background through the Internet + model, so as to develop a means suitable for market operations. Means to increase the profitability of the market, thereby adjusting marketing methods to avoid blindly following the crowd. Suitable for a reasonable marketing model can bring good benefits. However, if the traditional marketing model is not only unable to promote the development of the market economy, it will also cause a series of problems after the economy, resulting in customer dissatisfaction, and the lack of new products. There are problems in the series of economies.[8] Only the joint marketing model and guiding the market to draw materials can better promote market development, promote my country’s economic growth, promote my country’s new strategy of sustainable development, strengthen my country’s profitability, and improve the people. Life [7].

3.3. How to solve the problems in traditional learning

The problems that exist in traditional learning all need to break the routine, and the emergence of mobile terminals just breaks the routine. The problem in traditional learning is to update the learning method to create a better learning platform, and the terminal mobile learning platform. The emergence is just to break this conventional learning method and find a better learning method that suits you. The problem in traditional learning is the need to develop and innovate, keep up with the development trend of the learning platform, and make good use of mobile terminals to solve the problem. The problems of traditional learning must be tackled from scratch to find the root of innovation, and innovation-driven development strategies will vigorously promote the development and application of Internet technology in traditional learning, improve student learning quality, create a relatively high-quality learning environment, and make breakthroughs for students. The traditional mode of thinking allows students to be more innovative and have their own thinking construction, so that they can truly break the tradition [8].

3.4. How to develop English teaching in the smart terminal mobile platform

Compared with smart terminals, the English teaching mode is more traditional, and the problems generated are more diversified. In addition, the dissemination and development of computer technology, combined with traditional teaching methods, allows smart terminal mobile platforms to be able to use English in English. Better establishment, this can not only increase students’ interest in learning English, but also improve students’ ability to learn English, and increase students’ thinking style. By improving this kind of English teaching, teachers can also promptly put forward some suggestions. The new ideas make students have a high interest in English learning, and meeting the above conditions can only be realized when the smart terminal is reasonable, and in the computer and Internet plus mode, only the continuous absorption of network big data, A large background model, so as to invest in the English classroom model to establish a corresponding learning system to achieve the best English teaching model [9].

4. Conclusion

Under the operation mode of Internet plus, it broke the traditional teaching mode and developed a new mobile terminal and mobile English teaching mode. Under this mode, students can better develop thinking, ask questions, and solve problems. Not only can computer technology grow in the seats, but it is also applied to people's living environment. It not only improves the use of computers, but also breaks through the problems existing in traditional teaching. Under this intelligent terminal mobile platform [10]. Find a more suitable learning method under English teaching, create a good learning atmosphere, and create a platform suitable for students to learn. The emergence of smart terminal
mobile platforms is also a development in the computer field in my country, which further implements my country’s innovative concepts, innovative mind.
