In “On Equality of Ranks of Local Components of Automorphic Representations” by Mohammad Bardestani and Hadi Salmasian, the statement of Remark 9.6 in its original form was incorrect and has been modified as follows.

**Remark 9.6.** For several groups $G$, it is known (see [12], [30]) that for every $\nu \in P$, an irreducible unitary representation of $G_\nu$ is minimal if and only if its $\nu$-rank is equal to one. For such $G$, Theorem 9.5 implies that if at least one local component of an automorphic representation of $G_\lambda$ is a minimal representation, then all of its local components are minimal.

This has been corrected online and in print. The authors regret this error.
