Electromagnetic radiation driving of volume changes in nanocomposites made of a thermosensitive hydrogel polymerized around conducting polymer nanoparticles

Silvestre Bongiovanni Abel, a, Claudia R. Rivarola, a Cesar A. Barbero, a and Maria Molina a, *

a Instituto de Investigaciones en Tecnologías Energéticas y Materiales Avanzados (IITEMA), Departamento de Química, Universidad Nacional de Río Cuarto (UNRC)-Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET). Ruta Nacional N° 36 Km 601, Agencia Postal N° 3, 5800, Río Cuarto, Argentina.

Supplementary Information

**Figure 1 SI.** a) Device used to perform the radiofrequency (RF) irradiation and b) diagram of the irradiation experiment.
Figure 2 SI. Differential scanning calorimetric plots for: a) HG@PPy NP, b) HG@PANI NF, and c) HG@PANI NP.

Table 1 SI. Irradiation sources used to generate the photothermal effect on composites.

| Electromagnetic radiation         | Power (W) | Spot area (cm²) |
|----------------------------------|-----------|-----------------|
| Microwaves (MW) 2.4 GHz          | 700       | Whole           |
| Radiofrequency (RF) 30 kHz       | 1000      | 150             |
