Abstract—In the scientific literature it has been repeatedly noted that the processes occurring in society have an impact on the state and tendencies of the development of criminality. The qualitative transformation of crime is evidenced by the tendencies of recorded crime noted in the article. The article presents the criminological characteristics of the state of crime in the Russian Federation and the Federal districts of the Russian Federation at the end of 2018, identified and analyzed the main tendencies of the development of criminality. The article notes the determinants that may have influenced the tendencies of modern crime. The results of the study led to the conclusion that an effective counteraction to criminality should be based on the evaluation of its real position, the identification of which is one of the important tasks not only of science but also of law enforcement and law application.

Keywords—criminal situation; criminality; crime situation; crime tendencies; criminal threats; transport crime; law and order; crime factors; determination

I. INTRODUCTION

Today, in high dynamism of social, economic and political processes, the effectiveness of law enforcement bodies in the field of countering criminality also depends on the depth of the comprehensive analysis and objective evaluation of the criminal situation in Russia and in some of its regions. A key element of this work is a scientifically based criminological analysis of criminality in the country and the identification of tendencies of its development in the nearest future.

The criminological analysis of the criminal situation [1] [2] is the basis of crime forecasting, which is an integral part of the unified system of forecasting the socio-economic development of the Russian Federation. However, the main purpose of the criminological analysis of the criminal situation is: to determine the key problems of social management and law enforcement bodies in the fight against criminality; identify priority areas of law enforcement from the standpoint of state and public interests; ensuring the solution of the management tasks set in the system of law enforcement bodies.

The presented comprehensive criminality analysis is the result of the study and evaluation of the totality of the criminal situation elements, based on a significant official statistics and aggregated information about external and internal conditions of the criminal situation in the country.

II. THE MAIN INDICATORS OF CRIMINALITY AT THE END OF 2018

“Great crime reduction” (greatcrimedrop) is considered to be a global trend of the last 10-15 years [3]. Against the background of the decrease in the number of reported crimes all over the world, the statistically reported crime trends in Russia, with their own characteristics, are comparable with world ones. In Russia, the number of reported crimes annually decreases on average of 6%.

In 2018, there was recorded the lowest value of the number of crimes over the past 20 years – 1 991 532 (-3,3% by 2017) and the number of persons committed crimes – 931 107, decreased by 3,7% (“Fig. 1”).
Fig. 1. Criminality dynamics in Russia in 2014-2018.

The decrease in the number of reported crimes was recorded in all the federal districts of the Russian Federation ("Table I"), the largest number of them is registered in the Central, Volga and Siberian Federal districts, accounting for the bulk (56,8%) of all crimes.

| Federal districts                  | Years                         |
|-----------------------------------|-------------------------------|
|                                   | 2014  | 2015  | 2016  | 2017  | 2018  |
| Central Federal district          | 517 802 | 556 490 | 505 267 | 462 824 | 450 961 |
| Increase / decrease, %            | 0,6   | 7,5   | 9,2   | 8,4   | 2,6   |
| North-Western Federal district    | 203 681 | 227 877 | 198 645 | 188 924 | 184 139 |
| Increase / decrease, %            | 1,5   | 11,9  | 12,8  | 4,9   | 2,5   |
| Southern Federal district         | 206 147 | 238 037 | 218 875 | 213 700 | 208 898 |
| Increase / decrease, %            | 16,3  | 15,5  | 8,1   | 2,4   | 2,2   |
| Volga Federal district            | 401 875 | 451 206 | 405 325 | 392 114 | 380 451 |
| Increase / decrease, %            | 3,7   | 12,3  | 10,2  | 3,3   | 3,0   |
| Ural Federal district             | 216 176 | 229 510 | 205 447 | 201 747 | 192 273 |
| Increase / decrease, %            | 3,6   | 6,2   | 10,5  | 1,8   | 4,6   |
| Siberian Federal district         | 393 383 | 422 926 | 382 167 | 364 252 | 299 661 |
| Increase / decrease, %            | 3,6   | 7,5   | 9,6   | 4,7   | 4,5   |
| Far Eastern Federal district      | 130 090 | 134 418 | 122 529 | 116 225 | 155 994 |
| Increase / decrease, %            | 2,6   | 3,3   | 8,8   | 5,1   | 6,5   |
| North-Caucasian Federal district  | 69 695  | 75 969  | 73 885  | 69 820  | 69 987  |
| Increase / decrease, %            | 2,6   | 9,0   | 2,7   | 5,5   | 0,2   |

The value of the criminality rate in the country also decreased and it is 1 355,9 crimes per 100 thousand people now (−3,3%) ("Table II").

Evaluating the degree of criminal defeat of the Federal districts in the Russian Federation, we note that the most difficult situation is in the Far Eastern, Siberian and Ural Federal districts, where the crime rate is higher than the all-Russian one ("Table III").

| Indicator        | 2014  | 2015  | 2016  | 2017  | 2018  |
|------------------|-------|-------|-------|-------|-------|
| Crime rate       | 1 500,30 | 1 632,95 | 1 474,00 | 1 402,2 | 1 355,9 |
TABLE III. THE CRIMINALITY RATE IN THE FEDERAL DISTRICTS OF THE RUSSIAN FEDERATION IN 2018

| District                       | Criminality rate | Increase / decrease, % |
|--------------------------------|------------------|-------------------------|
| Russia                         | 1355.9           | -3.3                    |
| Far Eastern Federal district   | 1897.1           | +0.9                    |
| Siberian Federal district      | 1739.2           | -7.7                    |
| Ural Federal district          | 1556.9           | -4.7                    |
| North-Western Federal district | 1319.8           | -7.7                    |
| Volga Federal district         | 1267.8           | -2.7                    |
| Southern Federal district      | 1270.5           | -2.3                    |
| Central Federal district       | 1147.2           | -2.8                    |
| North-Caucasian Federal district | 712.4          | -0.3                    |

In all the federal districts, there is reported a decrease in the criminality rate, except the Far Eastern Federal district (+0.9%), which is due to including the Republic of Buryatia and the Trans-Baikal territory, the formerly part of the Siberian Federal district [4].

III. THE CRIMINALITY STRUCTURE IN RUSSIA AT THE END OF 2018

The analysis of the criminality structure in Russia makes it possible to prove that the “statistical face” are crimes against property (55.91%; 1 113 366). Also, the criminality structure includes crimes against a person (10.46%; 208 286); acts related to illicit drug trafficking, psychotropic substances or their analogues, potent substances (10.06%; 200 306); economic crimes (5.5%; 109 463), corruption crimes (1.53%; 30 495), crimes of illegal turnover of weapons (1.38%; 27 452); environmental crimes (1.2 percent; 23 899); terrorist crimes (0.08 %; 1,679) and extremist crimes (0.06%; 1,265) (“Fig. 2”).

![Fig. 2. The criminality structure in Russia at the end of 2018.](image)

Along with the reduction of quantitative crime indicators its negative qualitative changes are registered. The crime components have changed in terms of its severity: there is the increase in serious (+6.8 %) and especially serious (+2.0 %) crimes, which occurred against the background of the decrease in the proportion of crimes of minor offences and misdemeanor (~ 0.2% and -3.5%). However, the ratio of different crimes categories proportion as a whole is the same (“Table IV”).
TABLE IV. CRIMES DYNAMICS BY SEVERITY AND THEIR PROPORTION IN THE RUSSIAN FEDERATION IN 2014-2018

| Crimes                          | Годы     |
|--------------------------------|----------|
|                                | 2014     | 2015     | 2016     | 2017     | 2018     |
| in total                       | 190 579  | 388 476  | 160 063  | 991 538  |
| especially serious crimes      | 127 806  | 126 360  | 107 422  | 112 201  |
| ratio of especially serious crimes proportion | 5.83     | 5.29     | 4.97     | 5.52     | 5.63     |
| serious crimes                 | 403 582  | 393 295  | 350 357  | 323 591  | 335 973  |
| ratio of serious crimes proportion | 18.42    | 16.47    | 16.22    | 16.7    | 16.8    |
| Misdemeanor                    | 728 834  | 820 354  | 748 387  | 706 636  | 660 056  |
| ratio of misdemeanor proportion | 33.27    | 34.35    | 34.65    | 33.34    | 33.14    |
| minor offences                 | 930 356  | 1048 467 | 953 897  | 914 537  | 883 301  |
| ratio of minor offences proportion | 42.47    | 43.90    | 44.16    | 44.43    | 44.35    |

IV. THE MAIN TRENDS OF CRIMINALITY IN 2018

According to official statistics in the whole country there is a decreased in the number of murders and attempted murders (-12.0%; 8 574), intentional grievous bodily harm (-5.4%; 23 224), theft (-4.1%; 756 395), fraud (-3.5%; 215 036), assignment or waste (-7.0%; 15 452), robbery (-11.9%; 50 111), banditry, (persons-17.9%; 7 474), extortion (-1.1%; 5 100), carjacking (-13.3%; 19 460), terrorist crimes (-10.3%; 1 679), extremist crimes (-16.8%; 1 265), environmental crimes (from -2.0%; 23 899), and also illicit drug trafficking offences (-4.0%; 200 306) and crimes in the sphere of illegal turnover of weapons (-5.1%; 27 452).

There is the decrease in the number of crimes committed while intoxicated: alchogolic (351 601; -7.0%), narcotic (14 574; -38.9%) and toxic (138; -17.9%), which may be the result of tightening penal responsibility for crimes committed while alcoholic intoxicated, as well as administrative responsibility for the violation of the alcoholic beverages trade rules in 2016-2017.

At the same time there is the increase in the number of crimes committed with the use of computer and telecommunication technologies (+92.8 per cent; 174 674), corruption (+2.9%; 30 495) and economic crimes (+4.2%; 109 643), committed with the use of weapons, ammunition, explosives, explosive or imitating them devices (+10.5 per cent; 6 003), facts of banditry (+3.5%; 89) and organizing a criminal community (criminal organization) or participation in it (+38.4%; 274), beatings by persons subjected to administrative punishment (+54.8 per cent 2 696) and torture (+3.6%; 3 103), as well as petty theft committed by persons subjected to administrative punishment (+49.8%; 13 861).

Among the registered crimes every third crime (634 027; 31.8%) of completed investigation crimes are committed by persons committed crimes before.

Every third offence (702 323; 35.3 %) is committed in a public place.

Among the more serious adverse qualitative changes in criminality with a self-determining content, are the following:

The occurrence and growth of technologically determined forms of criminality, poorly reflected in statistics due to high latency, which is provoked by informatization, cybernetization, internetization and robotization.

Thus, the annual growth of cybercrime is measured in tens of percent (in 2018: +92%). This process is irreversible, associated with the increasing penetration of Internet addiction, smartphone addiction, shopping addiction, cyberbullying and other negative manifestations of the forming digital society [5].

In 1985, there were only 20 thousand users of telecommunication technologies in the world, by 2018 their number had increased by 200 thousand times and exceeded the threshold of 4 billion rub. At the end of 2013, only 72.5 million people were users of telecommunication networks in Russia. In April 2018, the audience of the Russian segment of the network (within domain names ".ru", ".su" and ".rf") has reached 90 million, it is the increase of more than 30%[6].

A. The Increase in Reported Organized Criminality for the Past Three Years

In 2017, the increase in the level of organized criminality was 5.7%, in 2018 it was already 16.3%, demonstrating the development vector opposite to the vector of whole criminality ("Fig. 3").
On the one hand, the protection of organized criminality from social control has decreased a little, because before efforts of law enforcement bodies kept the reported part of it within certain almost unchanged boundaries. Now, by identifying more acts, these efforts have reduced its latent part.

On the other hand, the growth of organized criminality, supported by the growth of recidivism and criminal professionalism, acting as its lowest link, displaces primary criminality from the "visible", registered part. The problem of countering criminality is exacerbated, in other words, the "load" on society from crime increases significantly.

B. Remaining Conditions for the Increase of Latent Criminality (Natural)

In the modern legal space, the lack of the domestic legislation efficiency is one of the significant factors that determine the possibility of the unhindered development of "uncontrolled" criminality. When more and more attacks are directed to "non-corporeal" goods, the traditional institutions of the criminal law protection and structures used by them cannot fully correspond to their purpose.

Actively discussed in the scientific community legislative initiative of the Supreme Court of the Russian Federation to modernize the concept of "crime" and introduce the concept "criminal offence" in the Criminal Code, aimed at reducing the number of persons sentenced to imprisonment, if adopted, will affect indicators of recorded criminality, moreover, will contribute a tendency to its decrease. However, it will not affect the effectiveness of countering new and modern criminal threats in general. The importance of this problem actualizes the issue of developing a mechanism for the radical transformation of criminal law, which can not be reduced to the fragmentary changes taking place today and the facts of fragmentation of the existing corpus delicti, as well as the casuistic way (using the analogy with pre-revolutionary law).

The increase of undetected criminality is also the result of the implementation of low-quality legal norms with "internal" destructive potential. Such norms (for example, the article 2341 of the Criminal Code) do not take into account the rapidly changing objective reality and confrontation of law enforcement bodies.

Global factors determining the existence and development of criminality (socio-demographic, economic, political, ideological, etc.) are still relevant. They are not only unblocked, but also continue to deepen and multiply. This is evidenced by the data of expert surveys. Thus, in 2016-2017, Federal State Governmental University "All-Russian Research Institute of the MIA of Russia" conducted a survey of 479 experts who were current employees of the territorial bodies of the Russian MIA, students of the Academy of Management of the Russian MIA, All-Russian Advanced Training Institute of the MIA of Russia and the Tyumen Advanced Training Institute of the MIA of Russia on the issues of the real criminality and registration of discipline in Russia. Only 13.3% of respondents noted the decrease in real and not in recorded criminality. According to the data of expert survey, rising unemployment, poverty, social inequality and social tensions are the main criminogenic factors. The value of these factors has become even more decisive over the past year.

Law enforcement bodies, first of all internal affairs bodies, register the majority of crimes (92.9%). According to the results of sociological research, they have a sufficient level of confidence in order not to be accused of mass concealing illegal acts and contributing to their latinization. In May 2018, All-Russian Center for Public Opinion Research conducted a telephone interview on the topic: "Law enforcement and judicial bodies: the rating of rights and freedoms defenders".

Respondents (2,000 Russians aged 18 and over and 500 representatives of legal entities) were asked to evaluate the activity of the Russian Interior Ministry, the Prosecutor's office, the Federal security service, the Investigative Committee, Russian guard, courts of various instances and the Federal bailiff service.

Fig. 3. Criminality rate dynamics in Russia in 2014-2018.
The Interior Ministry of Russia has taken a leading position on issues related to seeking help. 54% of citizens first of all would apply to the Russian Interior Ministry in case of committing a violent crime (robbery, rape, beatings, attempted murder, etc.), 40% – in case of fraud, 22% – in case of a terrorist threat. Entrepreneurs are ready to apply to the Ministry of Internal Affairs of Russia in case of collision with the activity of criminal associations (50%); extortion, bribery, corruption (39%); raider seizure (33%); crimes in the credit and financial sphere (35%) and fraud in business (46%) [7].

The analysis of the main tendencies of the criminal situation in the territory of the Russian Federation at the end of 2018 shows that crime continues to develop actively, despite the decline in most statistical indicators, this is happening in areas that are difficult to implement social control.

V. PERSONS IDENTIFIED FOR COMMITTING CRIMES IN THE RUSSIAN FEDERATION

In 2018, the tendency of the decrease in the majority of absolute indicators characterizing persons identified for crimes continued. At the same time, there was the increase in the number of unemployed criminals (+8.7%), who committed crimes during the first year after the release from the correctional institution (+5.2%), during the unserved part of the sentence after parole (+2.4%), during the probation period with a conditional sentence (8.5%) (see "Table V").

| Identified persons | 2014 | 2015 | 2016 | 2017 | 2018 |
|--------------------|------|------|------|------|------|
| In total           | 1,006,003 | 1,075,333 | 1,015,875 | 967,103 | 931,107 |
| Increase / decrease, % | -0.6 | 6.9 | -5.5 | -4.8 | -3.7 |
| Women              | 158,156 | 172,178 | 148,026 | 146,916 | 145,486 |
| Increase / decrease, % | 1.2 | 8.9 | -14.0 | -0.7 | -1.0 |
| Juveniles          | 54,369 | 55,993 | 48,589 | 42,504 | 40,860 |
| Increase / decrease, % | -10.5 | 3.0 | -13.2 | -12.5 | -3.9 |
| Pupils / students  | 54,870 | 55,963 | 49,971 | 45,504 | 44,430 |
| Increase / decrease, % | -10.5 | 1.5 | -10.7 | -8.9 | -2.4 |
| Persons without a permanent income | 663,097 | 716,638 | 664,627 | 635,517 | 601,252 |
| Increase / decrease, % | -0.3 | 8.1 | -7.3 | -4.4 | -5.4 |
| Unemployed persons | 33,012 | 22,011 | 6,146 | 4,391 | 4,775 |
| Increase / decrease, % | -8.0 | -37.1 | -72.1 | -28.6 | 8.7 |
| Persons committed crimes in the group | 138,716 | 152,072 | 141,478 | 131,165 | 127,015 |
| Increase / decrease, % | -4.6 | 9.6 | -7.0 | -7.3 | -3.2 |
| Persons committed crimes in an alcohol intoxication | 311,347 | 354,397 | 395,299 | 352,062 | 326,269 |
| Increase / decrease, % | 4.4 | 13.8 | 11.5 | -10.9 | -7.3 |
| Persons committed crimes in an drug intoxication | 29,451 | 30,523 | 25,969 | 21,370 | 11,998 |
| Increase / decrease, % | 16.8 | 3.6 | -14.9 | -17.7 | -43.9 |
| Persons committed crimes before | 510,122 | 556,914 | 548,382 | 541,541 | 525,475 |
| Increase / decrease, % | 5.7 | 9.2 | -1.5 | -1.2 | -3.0 |
| Persons convicted before | 308,616 | 303,494 | 272,967 | 273,379 | 270,988 |
| Increase / decrease, % | -1.2 | -1.7 | -5.8 | 5.2 | -0.9 |
| Within 1 year after liberation | 37,320 | 43,634 | 37,851 | 39,223 | 41,253 |
| Increase / decrease, % | 7.9 | 16.9 | -13.3 | 3.6 | 5.2 |
| After parole | 10,843 | 9,288 | 7,635 | 8,233 | 8,432 |
| Increase / decrease, % | -18.5 | -14.3 | -17.3 | 7.1 | 2.4 |
| During the trial period when the conditional term condemnation | 34,520 | 31,965 | 29,341 | 34,862 | 37,815 |
| Increase / decrease, % | 3.3 | -7.4 | -8.2 | 18.8 | 8.5 |
| Foreign citizens and persons without citizenship | 38,051 | 41,522 | 37,684 | 35,130 | 32,728 |
| Increase / decrease, % | -1.2 | 7.8 | -9.2 | -6.8 | -6.8 |
| CIS nationals | 33,475 | 36,512 | 33,279 | 31,232 | 29,030 |
| Increase / decrease, % | -1.5 | 9.1 | -8.9 | -6.2 | -6.5 |

The results of the analysis of relative indicators make it possible to state that in the structure of persons identified for crimes, the proportion of women (+2.6%); pupils, students (+2.1); persons committed crimes before (+0.7%) and previously convicted (+2.2%) is growing (see “Table VI”).
In 2018, the all-Russian level (coefficient) of the criminal activity of the population decreased by 3.6% and it is 759.8 today (in 2017 – 788.2).

The downward trend in this indicator is also characteristic of the federal districts. The exception was the Far Eastern Federal district, where not only the increase in the level of criminal activity of the population (+4.9%) was recorded, but also its maximum value (1198.4). The adverse situation is in the Urals (919.8) and Siberian (1072.1) Federal districts (see "Fig. 4").

The vast majority of persons identified for crimes are citizens of the Russian Federation.

The share of foreign citizens and persons without citizenship is insignificant (in 2018 – 3.5%). Since 2016, this indicator has been steadily declining. The number of crimes committed by this category of persons has also decreased (~6.0% by 2017). This trend is the result of a comprehensive approach to combating illegal migration:

- the implementation of the priority program "Control and supervisory activity reform";
- the implementation of the risk-based approach while planning inspections of controlled subjects in the work of migration units;
- the development of the program of preventing risks of harm to the values protected by the law at the implementation of federal state control (supervision) in the field of migration;

![Fig. 4. Ranking of Federal districts according to the level of criminal activity of the population at the end of 2018.](image-url)

![Table 6. Dynamics of the proportion of persons identified for crimes in the Russian Federation in 2014-2018.](table-url)
the regular monitoring of the foreign citizens stay on the territory of the Russian Federation. Only in 2018, 429.6 thousand verification measures were carried out to identify violations of migration legislation, 707.2 thousand administrative offences were revealed. There were taken 240.5 thousand decisions about unauthorized entry relating foreign nationals violated Russian legislation in the field of migration, 7.3 thousand - about deportation, 54.4 thousand about reduction of temporary stay term.

The greatest criminal activity is in the 30-49 and 25-29 years old age groups. During the study period, the proportion of juveniles did not exceed 5.4% of all persons identified for crimes. Over the past four years, this figure has been steadily declining (a decline by 2014 -18.5%). Despite this fact, it is impossible to talk about positive trends, because:

- the number of especially serious pre-investigated crimes (among those in production or registered in 2018) committed by juveniles or with their complicity increased by 5.6% ;
- the proportion of the number of juveniles committed crimes in complicity remains high (in 2018 – 47.7%), that indicates an increased degree of public danger not only of such crimes, but also of those who committed them. Since 2014, this figure has been growing consistently (see "Table VII").

| Persons committed crimes in the group | 2014 | 2015 | 2016 | 2017 | 2018 | Increase / decrease, % by 2017 |
|--------------------------------------|------|------|------|------|------|-----------------------------|
| Juveniles                            | 41.8 | 42.2 | 44.2 | 46.8 | 47.7 | 1.9                         |

Since 2017, the absolute figures of the number of juveniles committed crimes as part of an organized group or criminal community (criminal organization) are growing; in 2018, the increase was 17.3% ;

In 2018, compared to 2017, the number of juveniles committed crimes during the unserved part of the sentence after parole increased by 53.3% (this figure in Russia was +2.4%).

In addition, according to Rosstat [8] there is the decrease in the number of:

- students received a certificate of secondary school (-4.1% by 2015 and -5.7% by 2000);
- additional education organizations on all types of children activity (-4.7% by 2015);
- youth sports schools (-42.4% by 2015);
- children's music, art, choreography and art schools (-3.0% k 2015 году).

To date, it is impossible to completely eliminate the negative impact on the behaviour of juveniles:

- information and communication technologies, despite a number of preventive measures (for example, the Federal law from December 18, 2018 № 472-FL "On amendments to the article 151 of the Federal Law "On information, information technologies and about information protection" and the article 5 of the Federal Law "On protection of children from information that harms their health and development", establishing additional mechanisms to counter activity aimed at encouraging children to commit illegal acts; there blocked the access to 7.8 thousand information resources containing pornographic materials with persons under the age of 18; there blocked the access to 25.8 thousand information resources related to the activity of persons inclining juveniles to suicidal behaviour with the psychological influence through the Internet and social networks, etc.);
- informal associations of juveniles ("Columbine community", AUE, etc.), promoting culture of violence, popularizing ideas of terrorism and extremism;
- groups of death (Sea of whales, Milky way, Silent house, Wake me up at 4:20, f57, f58, etc.), carrying out their activity through social networks;
- games ("Blue whale", "Run or die", "Fairy fire", "Prison", etc.), created in the social network "Vkontakte".

These circumstances indicate the threat of a negative trend associated with a possible increase in crimes committed by juveniles or with their complicity.

VI. CONCLUSION

In current socio-economic and political conditions of modern Russia, ensuring the law and order is the strategic direction that requires significant national efforts focused on strengthening the judicial and law enforcement institutions of the state and society.

In the sphere of countering criminality, all major decisions should be based on the reliable mechanisms of the criminological analysis, as well as regional and state program and target planning, which will create prerequisites for the maximum activation and improvement of organizational, managerial, law enforcement and operational activity of all bodies designed to control the criminal situation in the country.

The effective counteraction to criminality should be based on the evaluation of its real position, the identification of which is one of the important tasks not only of science but also of law enforcement and law application. The
determination of the nature, reasons for the operation and true scale of criminality makes it possible to counteract the criminalization of society and the state, strengthen the rule of law and the judiciary.
