ABSTRACT
The purpose of this Community Service in Palasari Village, Ujung Jaya District, Sumedang Regency is the implementation of a web-based accounting information system. The assistance of the Palasari village community uses two schemes in the implementation of the accounting information system, namely the first scheme for general WEB introduction and the second scheme for WEB maintenance. The methodology uses a descriptive approach, surveys, interviews, and implementation of a web-based accounting information system using a content management system. The assistance of the Palasari village community in the implementation of a web-based accounting information system was carried out by video conferencing using zoom media. Based on the results of the questionnaire, community service was considered quite good and village officials needed continuous training.

Key words: Accounting Information System, Web, And Descriptive Approach

INTRODUCTION
The village is an autonomous region that can determine and make policies independently, starting with the election of village head candidates, allocating village budget funds to making policies made with village regulations. Autonomy is a way to improve the region itself, from public services to natural resources in the village itself, and to how to manage village finances that are accountable and transparent following predetermined regulations and standards [1].

Village autonomy can make plans for the realization of the village expenditure budget, whose implementation has been regulated in established regulations and standards so that village financial management can be accounted for, villages must be able to apply accountable and transparent principles in their management [2].

Accounting information systems in government can improve the information that is accurate, reliable, accountable, and transparent so that financial management can be accounted for [3].

Accountable allocation of village funds is one component of performance in public services in accordance with Undang-undang Nomor 6 Tahun 2014 [4].

Village financial management can use the village financial system application (SISKEUDES) for free, government efforts to integrate the financial system, and transparency in the management of village funds. Meanwhile, in introducing the village's potential, you can use the media website, with the village website can help and introduce the
potential of the village so that it can attract investment in the village and can improve the welfare of the village community [5].

Palasaari Village is located in Ujungjaya District, Sumedang Regency which is directly adjacent to Majalengka District. Community Service in Palasaari Village efforts to support and introduce website media. Website as a medium for transparency in village financial management, with information on the website of the village government's efforts in being accountable for village financial management, the use of the website can also be used as a medium in introducing village potential to attract investment in Palasari village.

METHOD OF IMPLEMENTATION

The descriptive approach is research that is carried out intensively, in detail, and in-depth on an organism (individual), institution, or certain phenomenon with a narrow area or subject [6]. The method used in community service is a descriptive approach to describe the actual situation in the Palasari Village Government, Ujung Jaya District, Sumedang Regency [7].

Implementation methods and expected results:
1. Survey and Interview: a form to determine conditions in the field;
2. Training and Workshop is an implementation of data and activities that have been carried out previously, namely surveys and interviews;
3. Evaluation, is a predetermined measure to measure the success of WEB Village Implementation in Palasari Village Community Activities.

Interviews were conducted with one of the village officials, namely the village secretary, to find out the circumstances and needs of the Palasari Village Government, Ujung Jaya District, Sumedang Regency. Based on the results of interviews, it was found that the village government does not yet have a website to introduce their village, financial transparency that has been managed by the village, and others. Based on the results of these interviews, we conducted a direct survey to the Palasari village office to see firsthand the actual situation, especially the computer equipment used and one of the sources of problems, namely unstable network connections and human resources that require training.
