Abstract. The goal of the research is to study the role of human capital in the contemporary society triggering an increase in the intrinsic value. This research reviews the theoretical aspects and fundamental legal principles related to the issue of human capital.

Research Design. Common quantitative methods of data collection and analysis were used as part of the systems analysis to study the human capital phenomenon in its entirety in the present-day context. Findings. It is demonstrated that the matters of human capital have been studied for many years. In Kazakhstan, the issues of human capital development and economic growth are being debated a lot. Practical relevance consists in the fact that the findings could be used for drawing up policy papers: State of the Nation Addresses, Laws, Strategies, Decrees, Statutes and many others.

1. Reference base
The authors used regulatory and normative documents of Kazakhstan. The following documents were developed: State of the Nation Address “New Opportunities under the Fourth Industrial Revolution”¹, Regulations on the Procedure for Creation and Maintenance of the Register of Training Centers for Vocational Training, Conversion Training, Advanced Training and Professional Certification of Technical and Maintenance Labor², the Decree of the President of the Republic of Kazakhstan No. 791 dated April 9, 2014 “On Formation of the Presidential Council of National Investors of the Republic of Kazakhstan”³ and many others. Approach. The authors use a descriptive approach to review the published studies on human capital. The research is based on the acquisition, analysis and integration of data.

2. Introduction
Human capital and economic growth are closely linked. Human capital is instrumental to economic growth. Today, human capital is gaining importance and is being viewed as a force for increasing profitability and productivity. The more a company invests in its staff (social dimension, education, training), the more efficient and profitable it can be, consequently contributing to economic growth.

There are many angles to the issue of human capital that is why there is no consensus on how to define human capital. In this regard, we have studied the concept of “human capital” discussed by various scientists and authors. We have systematized this concept.

³Decree of the President of the Republic of Kazakhstan No. 87 dated August 5, 2019. On Changes and Amendments to the Decree of the President of the Republic of Kazakhstan No. 791 dated April 9, 2014 “On Formation of the Presidential Council of National Investors of the Republic of Kazakhstan”. http://nomad.su/?a=3-201908160039 (access date: July 23, 2019)
The human capital theory is essentially about investing into human resources to improve their performance and to grow revenue. Expenses are incurred in reliance on benefits receivable; therefore, human capital and human resources investment, like all investments, becomes a key issue [12], [13].

During Astana Economic Forum 2019 (hereinafter referred to as the AEF) – A Bridge between East and West in the Age of High Market Volatility, Global Problems and Challenges of the Global Economic Order, it was said that there are certain factors that help to reduce uncertainty and ensure sustainable development of human capital. In his report, Nursultan Nazarbayev, the Leader of the Nation, stated “...active volatile human capital provides for sustainable economic growth.”

3. Results and their discussion

Today, the Government of Kazakhstan is developing a policy that should be focused on the enhanced role of human capital, achievement of high educational standards and ensuring equal educational opportunities 4.

Economists note that human capital will be a key to developing a competitive and cultural environment 5 [11], [18].

In Adam Smith’s theory the capital is said to be one of the two parts of man’s stocks, which he expects to afford him revenue; the other part is intended for immediate consumption. In his research Wealth of Nation, A. Smith designated “human capital” as fixed capital, which consists of acquired and valuable skills of the population or society members 6. This is true, since it confirms the importance of this theory of human capital development and economic growth of the entire community 7 [13], [20].

Note that Gary S. Becker, a Nobel laureate in economics, was a pioneer in applying economic analysis to interpret human behavior in regards to discrimination, marriage, family relationships and education. The Nobel Committee considers Gary S. Becker’s research on human capital as a major contribution to the economics 8.

What is more, according to the decision of the Presidential Council of National Investors of the Republic of Kazakhstan, a permanent working group concerned with the development of human capital is acting in Kazakhstan to achieve the set objectives 9. This is of no small important, with today’s realities in mind.

We should note that in May 2019, the annual AEF was held in the capital of Kazakhstan. World leaders and international leading experts discussed the key problems of the world economy and developed recommendations on how to solve these problems in Kazakhstan. A special theme of the 12th AEF was “Inspiring Growth: People, Cities, Economies”, where one of the topics was “Human Capital – Assets Inclusive Development of Kazakhstan 10” [14], [15], [20].

Activities (Table 1). Important measures were put in place regarding national pension schemes for the residents of the Eurasian Economic Union (hereinafter referred to as the EAEU) countries. Social and labor relations are being digitalized within the Union. Negotiations regarding an establishment of a unified integrated information system and the Eurasian electronic public employment service are in progress. An agreement on pension provision for workers of the EAEU member states was signed. It provides for the equal pension schemes of foreign workers and their family members a special status during their long-term employment.

11 Nursultan Nazarbayev and Vladimir Putin visit the “Development of Human Capital” exhibition
Presentation of educational systems of Kazakhstan and Russia.

Note: developed by the author using the Internet sources

The Republic of Kazakhstan consistently allocates funds for education and public health services, various reforms are introduced[16], [19]. The Republic of Kazakhstan was ranked 42 among 140 countries in the Global Competitiveness Index 2015-2016 of the World Economic Forum (WEF). In this ranking, education and science are estimated by 12 indicators. Kazakhstan has made progress against eight of them, including quality of the educational system and research establishments, Internet access in schools, accessibility and affordability of research and educational services[12].

4. Conclusion
Kazakhstan pays considerable attention to human capital as the most important factor of economic growth. Today, the spheres of education, science and innovation potential of the country are being dynamically modernized. A large number of grants are being allocated in the sphere of education. Social issues are being addressed. Therefore, we see an enhancement of the government role in the system of factors promoting human capital growth. Year on year, macroeconomic performance of the Republic of Kazakhstan shows favorable results. The poverty rate in the country decreased almost 7 times: from 34% in 1996 to about 5% in 2018. It is important to create favorable conditions to retain human capital in the Republic of Kazakhstan today.

5. Acknowledgment
We thank our parents and colleagues who supported us while we were working on the research. We thank N. Niyazbekova for the help in finding necessary regulatory documents on human capital.
