The nonlinear Schrödinger equation in the half-space

ANTONIO J. FERNÁNDEZ
Instituto de Ciencias Matemáticas, Madrid (Spain)

Abstract
We consider the (stationary) nonlinear Schrödinger equation in the half-space with non-homogeneous constant Dirichlet boundary conditions. We analyse the existence, non-existence, and multiplicity of smooth bounded positive solutions. We show that the existence and multiplicity depend in a striking way on the boundary value and also on the dimension. The talk is based on a joint work with Tobias Weth.
