The Scientific Conferences Organized During War Time (1992-1995) in Sarajevo

Izet Masic
Faculty of medicine, University of Sarajevo, Bosnia and Herzegovina

SUMMARY

Author of this paper spent 1479 days in the siege of Sarajevo, during the period of war time in Bosnia and Herzegovina (B&H). This siege, lasting from 1992 to 1995 (e.g. Dayton Peace agreement was signed in November, 1995) represents the longest siege in the history of the world. Besides usual daily work, as the associate professor of Health education, Medical deontology and Medical informatics for the students of the Faculty of medicine, Faculty of dental medicine, Faculty of Pharmacy and Nursing college of University of Sarajevo, the author organized by himself and contributors, 10 scientific conferences in a sieged Sarajevo. All presented papers at those conferences are published in Proceedings abstract books, as the proof of continuing scientific work, in Sarajevo and other cities in B&H. Additionally, the author continued to publish, in that time, unique PubMed/MedLine indexed journal, - Medical Archives, (i.e. established in 1947) and, in 1993 formed a new journal named - “Acta Informatica Medica” (AIM), as the Journal of the Bosnian Society of Medical informatics. Bosnian Society of Medical Informatics, thus became the first scientific association from Bosnia and Herzegovina, included in 1994, in the European Federation of Medical Informatics (EFMI) and the International Medical Informatics Association (IMIA), which was “miracle” from the besieged Sarajevo and war time result of aggression on Bosnia and Herzegovina. It should be noted that the importance of maintaining these academic gatherings, in the circumstances of war, was multifaceted. First of all, thanks to these meetings, the continuity of scientific meetings and activities in the besieged city of Sarajevo was not broken, as well as the continuity of scientific publication, which was crucial for the maintenance of the teaching staff at the university and, finally, in the expansion of the “scientific truth” about what happened in Sarajevo and B&H in these difficult times. All of this was critical to the “survival” of B&H and its people. Some of the published articles, especially in the Medical Archives journal, which even in difficult war conditions did not break the continuity of its publication, and then it was the only scientific journal indexed in B&H, having been consequently cited in the major biomedical data bases in the world. Many scientists abroad have had the opportunity to learn about some of the wonders of Sarajevo “war medicine”, thanks to this journal. Finally, despite the fact that it is another way of expressing its resistance to the aggression on B&H, the organized symposia in the war represented the continuity of the scientific research activities. Bosnia and Herzegovina and Sarajevo under siege, in this way, kept in touch with the civilized world and modern achievements, despite the fact that they were victims of medieval barbarism. In addition, these meetings sent a powerful message to the world about the willingness to register and systematized all the war experiences, especially those related to medicine and medical practice, in terms of what Europe has not known, since the Second World War. Partially, we succeeded in that. The total number of 286 presentations were presented in seven war Conferences, as quantitative and qualitative contribution to the scientific activities, despite the inhuman conditions, in which these articles emerged. These presentations and Conferences testify to the enthusiasm of B&H community and academic institutions that have collaborated with it. Authors and co-authors presented the “war” articles that deserve to be mentioned in the monograph “1479 days of the siege of Sarajevo”. Unfortunately, many of these brave authors are not alive and cannot read this. The task for us remains to remember them by their own good. Old Persian proverb says; “The event which is not recorded is as like it had never happened”. Sapienti sat.

Key words: Bosnia and Herzegovina, siege, scientific meetings during wartime.

For a long time I hesitated, as to whether to write this text, as the required contribution for the monograph “1479 Days of the Siege of Sarajevo”. My hesitation was largely due to the fact that I was aware that the sole writing of its contents, a subsequent review of the text and its correction will bring unpleasant thoughts and associations of, as the title of the monograph says, “1479 days of the siege of Sarajevo”. As the text was not included in the contents of the named monograph, for unknown reasons to me, and I was aware about the fact that this will all be forgotten if not recorded, I decided to publish it as a “Contribution to history of medicine in B&H”, in the Journal, “Matteria Socio Medica”. I made the decision to write this article, during the stay in Lisbon in 2009, during the European Congress on Public Health, in the triple function:- as the official representative of the B&H Association of Public Health: a member of the General Assembly, a member of the Scientific–Program Committee of the European Congress on Public Health (EUPHA) and the member of the European Journal of Public Health. Given that this event brought together an impressive number of over 1,500 participants, which also had associated the scientific conference of the
European School of Health (ASPHER), a celebration of 60th anniversary of the World Health Organization (WHO) was organized. On these occasions several significant awards for deserving scholars and researchers in public health in WHO member countries were awarded, among them, as it is usual, again, there was no one from our Balkan region. The first President of the WHO’s General Assembly was professor Andrija Štampar MD,Ph.D. and at least 20 other prominent people from our region deserve to receive one of the most prestigious awards. Awards were given to those among us, who in our area represented the “scientific brokers”, during those 1479 days of siege and put our grandchildren into debt, by the World Bank, for the projects in the field of public health.

Those researchers who were nominated and awarded in Lisbon, had to stay in Sarajevo, during the worst period of siege and made a certain contribution to the captives in the besieged city of Sarajevo, and survived thanks to their own patents, and recipes, of type--as to, how to make something from nothing? The figure of 3,000 recipes that were cooked in the pauses, between the shellings, in the ruins, which were homes without water, electricity, gas, etc... where, at least two types of heroes of war were distinguished, together with the “heroes in white”. Unfortunately, neither the first nor the second are mentioned or discussed in a far, far lesser extent than they deserve. Due to the limited size of this contribution I will mention some of the sketches from that period, and why these “heroes in white” look like the heroes.

I remember the war scenes, seen in a just finished building of the Diagnostics and Polyclinics department (D&P) and the famous room 505 (e.g. now in my head I wear an ugly association for that room, even though the candy “505” has always been synonymous with the sweet and beautiful), in which four of the scientific enthusiasts: Zoran Ridanović, Ljubomir Kravec, Želimir Nastic and myself wrote the impressions of war wonders of these “heroes in white” of the Clinical Centre in Sarajevo, but also of those in other areas, simply with the benevolent hands of people like Susanne Sonntag, Henry (Anry) Levi, Elizabeth Mot and others, come impressions to countries and the people who had absolutely no idea about the events in Sarajevo and B&H (1, 2, 3, 4, 5, 6, 7, 8, 9, 10).

The Canadian government in Sarajevo installed three five KW, diesel-powered electricity aggregate mobile power stations: one in the B&H Presidency building, the second on UNPROFOR premises and third in the Clinical Center. This third one, was hidden somewhere among the concrete blocks, dosed, started and stopped, according to the needs and helped us to organize seven scientific meetings, during this time period. In a very limited number of copies (50-200) we managed to make 47 of a total of 98 (of some sort of issues--war publications), which, in 1995, were officially registered as “the publications from B&H”. The journalist of the war newspaper „Večernje novine“, Mrs. Danka Savic than made an interview with me under the headline, “For all is blamed the Chinese lantern” has left a testimony on the war miracle--the work of four of us--publishing in the besieged Sarajevo. We knew to walk with the electric test pens in our hands on the third floor of the D&P, stumble on many power cords of different thicknesses and lengths, and search the outlet that is “live” for the printer through which we printed 250 grams thick cardboard and paper whose package of 500 sheets cost 50 German marks. By comparison, the monthly salaries of journalists in the „Večernje novine“ was 15.0000 KM or 3 German marks. That was the price of a matchbox. Sometimes the voltage was so low that we alternately used the monitor or printer, or we were printing by shutting off the monitor.

From this dark period, I will mention four most characteristic events (3, 4, 5, 7):

- Celebration of 100th anniversary of the Provincial Hospital in Sarajevo (now the Clinical Center) and 50th anniversary of the first Medical faculty in Bosnia and Herzegovina;
- Scientific Meeting “War medicine and medicine in the war”, organized in 1993;
- Scientific Meeting “Contribution to the history of cultural and educational development in B&H”, organized in 1993;
- Contribution to musical cultural heritage of Bosnia and Herzegovina, organized in 1994.

By the first meeting the Sarajevo, as the newly appointed capital of the B&H, transpired in the world and European public the details of which few people knew, even those who have earned a pension in these institutions. Among other things, it was revealed that the Sarajevo Clinical Center, or at the time, when it was founded—the National Hospital in Sarajevo, was one of the most modern and among the best equipped health institutions in the Austro-Hungarian monarchy (in which worked part of the best health personnel of the monarchy (assistants of the famous Viennese professor Praindsberger, Sretner, Gluck, Wais, Vodinski, Kaunic etc.). During 1898, in this hospital was tested among the first in Europe, Siemens X-ray machine, just two years after its inventor approved the production of such devices in Europe (3, 4). Innovations in the facilities of then four departments with 305 beds with an architectural point of view was such that Europe admired them for many years, and in this hospital such a complex surgical operating procedures were routinely performed, as in the leading university cities—Vienna, Paris and London. National Hospital in the period since 1897 to 1903 had the journal named „Godišnjak“ (Yearbook), in which the German doctors who were working in this and other hospitals in Bosnia and Herzegovina at that time published on the specific indigenous diseases of this region (i.e. lues, leprosy, trachoma, etc.) and it was interesting for European scientists, so in 1903 in Sarajevo was organized the World Congress of dermatology under the auspices of the German dermatological society. Mentioned Yearbook was officially the first biomedical journal in Bosnia and Herzegovina, which place it among the oldest in Europe. It is interesting that in Sarajevo and B&H then existed the only leprosaria in Europe, and perhaps even in the world, because there were plenty of leprosy cases in the adult population. Particularly distinctive case embalming throne Franz Ferdinand and his wife Sophia after the assassination in Sarajevo on 28 June 1914, conducted by then a young doctor Paul Kaunic, which for that situation, but for some reason imposed, was one of medical miracles. Distinguished name of one of the best students of the Vienna Medical School (winner of the Imperial ring 1909), Chief physician Hamdija Karamahmedovic MD, scholar of seven
languages, already in 1911 started the idea of establishing the first medical faculty in Bosnia and Herzegovina and visited several universities in Europe, preparing to in accordance with the then adopted Law on health institutions from 1914 implement it. Unfortunately, a mentioned assassination and the beginning of World War II laid down the realization of this idea, until 1944 when the NDH (Independent State of Croatia) government in Zagreb, approved the establishment of the Medical Faculty in Sarajevo and Split (at that time there were already the Belgrade Faculty of Medicine formed in 1919 and Zagreb in 1921). The University will officially start work on the premises of today’s elementary school “Edhem Mulabdić” now the premises of “Konak” in Bistrik. The first lecture was held on 22nd November 1944 by the professor of anatomy Zdenko Krizan. Unfortunately, this first generation of faculty did not end the first academic year during the war, but students were transferred to other medical schools in Belgrade, Zagreb, Ljubljana and at other faculties in Sarajevo. Officially, the current Medical Faculty begins to work on 16th November 1946 and be one of the master faculty of the newly formed University in Sarajevo on December 2, 1949 (5, 6, 7).

An interesting event in the days of the war in Sarajevo was to organize the scientific conference named, “Contribution to the study of musical cultural heritage in Bosnia and Herzegovina” in February 1994, jointly by the Association for intercultural activities and salvage of the heritage of Bosnia and Herzegovina, B&H Academy of Music and the Society of Medical Informatics of Bosnia and Herzegovina. At this meeting 35 articles were presented which were very varied content, from those related to the musical history of medieval Bosnia, Bosnian nursery rhymes, poetry, Bosniaks dervishes, poets of the Sephardic romances, the interpretation of the adhan in B&H, and ilahia kasida Bosniak history of Saz in Bosnia and Herzegovina, traditional songs, until the pop and rock era of Sarajevo scene. The first time the authors from Bosnia and Herzegovina in a specific way show how the musical traditions of cultural heritage in Bosnia and Herzegovina is rich and varied and well known compared to those in the region and beyond. I remember that late Zaim Imamovic, dean of the sevdalinka (specific Bosnian musical expression) in Bosnia, just after he had dictated to professor Enver Imamovic summary of his article on sevdalinka passed away, and his article was later presented by Mohamed Zero, a mechanical engineer, who after this event with his associates, along with me, made one of the richest collections of traditional songs of B&H called “Sevdah of Bosniaks”, which until now has had ten editions.

The third significant event was the organization of the Symposium “Cultural and Educational Development in B&H” in the Academy of Sciences and Arts of B&H in April 1993 where was presented many articles. In the organization of this scientific conference “Contribution to the history of cultural and educational development of B&H” was involved: the Academy of Sciences and Arts of Republic of B&H; Association for intellectual activities and salvage of the RB&H heritage–A1ASN, University of Sarajevo; Society for Medical Informatics of RB&H; Cultural Society of Muslims “Preporod”, the Croatian Cultural society “Napredak”, Institute for the Protection of cultural and Natural Heritage of RB&H; Sarajevo City Library. On the occasion of the opening of the gathering, former president of the Academy professor Seid Huković MD stressed that “cultural and educational development in Bosnia and Herzegovina is often identified only with organized education and to the Western model, which is not quite true. It is true that organized education at various levels played an important role in this development, but, as we medics say, have side effects and adverse side effects. In the literature, one can find many more on the positive role of education, but much less than it should be found negative side effects of education, as it was in B&H. This represents the reality of today’s life, if we survive the genocide in Bosnia and ur bicide to culturecide of the working people, who were the subject of the education and were not without the cultural and educational impact, the kind we’ve had. All of this represents our immense failure and who knows whether it is even possible to forget and forgive... Big flaw in the cultural and educational development of B&H was closely related to the creators and donors of the cultural and educational content. I give all honors to those who honestly carried out their duties as educators, but the trainer cannot be everyone. Many of those who educate our children in those post-war years were presented those “fitted and secure -government funded positions”, must look for a system of skills and virtues. They themselves are witnesses as to who and how is doing this job without: a motive, knowledge, good will basic conditions and positive virtues. They themselves were not honest, tolerant, and some of them were even inclined corruption, nepotism, favoritism, moral and political “fitness” and even crime... Finally, our cultural and educational...
Table 1. Number of seminars held during the war years

| Year | No. of organized seminars | No. of presentations |
|------|---------------------------|----------------------|
| 1992 | 1                         | 11 (3.8%)            |
| 1993 | 4                         | 163 (57%)            |
| 1994 | 2                         | 112 (39%)            |
| Total| 7                         | 286                  |

The Scientific Conferences Organized During War Time (1992-1995) in Sarajevo

In the period since 1992 to 1995 was held in Sarajevo, ten scientific and professional conferences:

- The first symposium on health informatics in Bosnia and Herzegovina. Topics: “Nomenclature and classification systems in health services”, Sarajevo, 30 December 1992;
- Symposium “The history of health and social culture of Bosnia and Herzegovina”, Sarajevo, 16-17 March 1993;
- Symposium: “Contribution to the history of cultural and educational development of Bosnia and Herzegovina”, Sarajevo, September 1993;
- Symposium “War medicine and the medicine in war in 92/93”, Sarajevo, 20-21 November 1993;
- 5th Second Conference on Information Technology in Health B&H. Topics was the “Nomenclature and classification systems in health services”. During the Conference 11 papers was presented from eight different entities (Center for Medical Informatics, Institute of Clinical Biochemistry, Institute of Pharmacology, Maxillofacial Surgery, Institute of Epidemiology and Statistics, Traumatology Clinic, Clinic of Infectious diseases and Psychiatric Clinic).
  - The largest number of papers had a Center for Medical Informatics (27%)
  - Clinic of Infectious diseases participated with two papers (18%)
  - Other participants had presented one paper each (9%)
- The second symposium was held in March 1993, entitled “History of health and social culture of Bosnia and Herzegovina”, and again organized by the Society for Medical Informatics RB&H. The symposium was of great importance both for the medical professionals as well as the general population, because, as said Professor S. Hukić MD when opening the symposium: “Knowing the medical history helps to create order, to avoid past mistakes and to take advantage of didactic progress. The claim that there was no history of health and culture is not true. Bosnia and Herzegovina for centuries has been influenced by Islamic culture, Arabic, Persian and other oriental doctors were carriers of the medieval medical doctrine and knowledge. ”
  - At this meeting was presented 39 papers in various fields of science and culture, with 20 different institutions that have studied this subject since then.
    - The Bureau for the Protection of Cultural, Historical and Natural Heritage RB&H, Department of Ophthalmology and the Institute for Social Medicine, were presented three papers each (8%);
    - Faculty of Architecture, Faculty of Pharmacy, Institute for the Protection of healthcare, Faculty of Science, Faculty of Dentistry and Center for Medical Informatics were present two papers each (5%).
- The third symposium was held in August 1993 in Sarajevo and this time organized by the Society for Medical Informatics of Bosnia and Herzegovina in order to, according to professor Izet Masic MD, who opened the event, “Bosnians, which is brutal, but life has been taken and taken right to the information sought to enable you to know that there are to know from whom and from where they originated. To know that there is a brighter future and better prospects. ”
  - At the event titled Appendix to the history of cultural and educational development of B&H have been presented a total of 39 papers from 22 institutions.
    - With five papers (13%) was presented Philosophy Faculty, with three (8%) presented the Faculty of Islamic Studies, while
    - Institute of History, Pedagogical Academy and Public Institute for protection and use of cultural, historical and natural heritage, RB&H presented two papers (5%).
- In November 1993 was held the Fourth War Symposium with the theme “War medicine and medicine in the war.” After 20 months of experience in the war, doctors and nurses were able to...
present what they have experienced and learned through work in extremely difficult circumstances, and thus to provide a practical and educational contributions to medical science.

- The meeting was attended by representatives from 36 institutions who presented a total of 79 papers; The largest number of papers was presented by the Pediatric Clinic six (8%); Four papers (5%) were presented by the Clinic of the ear, nose and throat diseases, Institute for physiotherapy and rehabilitation, gastroenterology clinic and Institute for Public Health; With three papers (4%) participated Maxillofacial Clinic, Neuropsychiatric Clinic, Institute of Clinical Chemistry, Department of Endocrinology, Department of Dermatology and French/State Hospital.

Fifth War Symposium held in December 1993 in Sarajevo called “Second consultation in health informatics in Bosnia and Herzegovina”, with the theme of health information system, without which, as in the prologue states professor Mašić, “could not imagine a functioning health care system today. In fact, modern information systems in healthcare are the main mechanism shaping the health care system, its rationalization, increase efficiency, economy and self-regeneration.” Counseling is tasked to provide an overview of modern concepts of individual sub-systems of health care information systems and to present the current level of potential and prospects of development of these systems in our communities.

In total there were six presenters

- of which three (50%) was papers from the Center for Medical Informatics, and the rest from the Faculty of Electrical Engineering, Institute of Pharmacology and the Electronic Computing Center.

Sixth War Symposium was named Contributions to the study of musical heritage in Bosnia and Herzegovina, and was held in February 1994. The organizers were the Association for intercultural activities and salvage of the heritage of Bosnia and Herzegovina, Sarajevo Music Academy and the Society of Medical Informatics.

From a total of 32 papers from 18 institutions, Most reports came from the Music Academy, eight (25%), four papers (12.5%) arrived from Radio and Television of B&H, and three (9%) from the Philosophy Faculty.

Seventh War symposium was held in November 1994 entitled "War medicine and medicine in the war," as part of the Jubilee of Health in B&H, the celebration of 100 years of the Regional/State Hospital in Sarajevo (Clinical Center of Sarajevo), and 50 years of Medical Faculty in Sarajevo.

A total of 80 professional and scientific papers from 30 institutions were presented.

- Clinic of Infectious diseases had a maximum of eight papers (10%); Medical Faculty, Gynecology and Obstetrics Clinic, Clinic of Pulmonary Diseases were presented with five papers (6%); Four papers (5%) had a Primary health care center; Institute of Radiology, Clinic for ear, nose and throat diseases, Clinic of Neurosurgery, Abdominal Surgery, Clinic for heart disease and rheumatism, and the Institute for physiotherapy and rehabilitation presented the three papers (4%). From the above data in Table 1 and Table 2 and Figure 1, Figure 2, Figure 3, Figure 4 and Figure 5 can be concluded that the largest number of seminars and presentations were held in the war 1993 year.

It should be noted that the importance of maintaining these academic gatherings in the circumstances of war was multifacetted. First of all, thanks to these meetings, continuity of scientific meetings and activities in the besieged city of Sarajevo was not broken, as well as the continuity of scientific publication, which was crucial for maintenance of the teaching staff at the university and, finally, the expansion of “scientific truth” about what happened in Sarajevo and B&H in these difficult times, it was critical to “survival” of B&H and its peoples. Some of the published articles, especially in the journal Medical Archives, which even in difficult conditions of war did not break the continuity of its publication, and then it was the only scientific journal indexed in B&H, have been quoted in major publications of the secondary index. Many scientists abroad have had the opportunity to learn about some of the wonders of Sarajevo “war medicine” thanks to this journal.

Finally, despite the fact that it is another way of expressing resistance to the aggression on Bosnia and Herzegovina, organized symposia in war represented the continuity of scientific research activities. Bosnia and Herzegovina and Sarajevo under siege, in this way kept in touch with the civilized world and modern achievements, despite the fact that they were victims of medieval barbarism. In addition, these meetings sent a message to the world about the willingness to register and systematize all the war experiences, especially those related to medicine and medical practice in terms of what Europe has not known since the Second World War. Partially, we succeeded in that. The total number of 286 presentations presented in seven war symposium is as quantitative and qualitative contribution to the scientific-research activities, despite the inhuman conditions in which these articles emerged. It only testifies to the enthusiasm of the B&H community and academic institutions that have collaborated with it. Authors and co-authors presented “war” articles that deserve to be mentioned in the monograph "1479 days of the siege of Sarajevo". Unfortunately, many of them are not alive and can not read this. It remains to remember them by their own good.
