In the original article, Figure 3 was incomplete. Only the scans for patients 1-5 were included in the manuscript. The scans for patients 6-10 were missing. Figure 3B has now been added, with the missing scans. In addition, Table 1 has been corrected as there was an error in the data.

Table 1. Properties of the different dialyzers

| Membrane            | Area (m²) | K_{UF} (mL/h/mmHg) | D_{fibre} (μm) | d (μm) | Sterilization technique | β_{1,9}M | Myoglobin |
|---------------------|-----------|--------------------|----------------|--------|-------------------------|---------|-----------|
| Solacea™,-19H       | ATA™      | 1.9                | 72             | 200    | gamma                  | 0.85    | 0.80      |
| FX 800CORDIA™       | PS        | 2.0                | 64             | 210    | INLINE steam           | 0.90    | 0.50      |

K_{UF}: ultrafiltration coefficient; D_{fibre}: fibre diameter; d, membrane thickness.
FIGURE 3: Cross-sections halfway the potting in 10 patients and four tested settings. The grey scale range is from 0 to 0.5/cm and the scale bar denotes 10 mm.
