Exome sequencing analysis of murine medulloblastoma models identifies WDR11 as a potential tumor suppressor in Group 3 tumors

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Principal component analysis of the gene expression of mouse Group3 MBs with or without enforced expression of WRD11 by the RNA-Sequencing.
Supplementary Figure 2: Global down-regulation of the WNT signaling pathway. Downregulated genes were highlighted in blue boxes using KEGG Mapper.

For Supplementary Tables 1-5, see the appropriate links on the Supplementary Files page.
