Table S1. Vitamin Solution for *Prevotella bryantii* B14

Vitamin solution was added after the autoclaving to achieve the final concentration in the media M2-A and –B.

| Ingredients                  | Molecular weight [g/mol] | Weight / Volume | Final concentration in culture |
|------------------------------|--------------------------|-----------------|--------------------------------|
| Hemin                        | 651.94                   | 1.00 mg/L       | 1,534 nM                       |
| Menadion                     | 172.18                   | 0.60 mg/L       | 3,485 nM                       |
| Folic acid                   | 441.40                   | 0.05 mg/L       | 113 nM                         |
| Thiamine hydrochloride       | 337.27                   | 2.00 mg/L       | 5,930 nM                       |
| Riboflavin                   | 376.37                   | 2.00 mg/L       | 5,314 nM                       |
| Nicotinamide                 | 112.12                   | 2.00 mg/L       | 17,838 nM                      |
| Pyridoxamine dihydrochloride | 241.11                   | 2.00 mg/L       | 8,295 nM                       |
| Ca-Pantothenate              | 476.54                   | 2.00 mg/L       | 4,197 nM                       |
| Aminobenzoic acid           | 137.14                   | 0.10 mg/L       | 729 nM                         |
| Biotin                       | 244.31                   | 0.05 mg/L       | 205 nM                         |
| Cyanocobalamin              | 1579.60                  | 0.05 mg/L       | 32 nM                          |
### Table S2. Composition of media for growth of *P. bryantii* B4.

| Ingredients                     | Weight/Volume | Final concentration in culture |
|---------------------------------|---------------|--------------------------------|
| NaHCO₃                          | 4.00 g/L      | 47.62 mM                       |
| NaCl                            | 0.90 g/L      | 15.40 mM                       |
| (NH₄)₂SO₄                       | 0.90 g/L      | 6.81 mM                        |
| KH₂PO₄                          | 0.45 g/L      | 3.31 mM                        |
| K₂HPO₄ x 3 H₂O                  | 0.45 g/L      | 1.97 mM                        |
| MgSO₄ x 7 H₂O                   | 0.10 g/L      | 0.61 mM                        |
| CaCl₂ x 2 H₂O                   | 0.09 g/L      | 0.41 mM                        |
| Glucose                         | 2.00 g/L      | 11.1 mM                        |
| Maltose¹                        | 2.00 g/L      | 5.8 mM                         |
| Lactose¹                        | 2.00 g/L      | 5.8 mM                         |
| Tryptic digested Casein         | 10.00 g/L     | 10.0 g/L                       |
| Cysteine x HCl x H₂O            | 1.00 g/L      | 5.7 mM                         |
| Acetic acid²                    | 0.9 / 1.7 g/L | 15.0 / 28.3 mM                 |
| Propionic acid²                 | 1.1 / 0.6 g/L | 15.0 / 8.1 mM                  |
| n-Butyrate²                     | 1.3 / 0.3 g/L | 15.0 / 3.4 mM                  |
| Iso-Butyrate²                   | 1.3 / 0.1 g/L | 15.0 / 1.1 mM                  |
| n-Valeric acid²                 | 1.5 / 0.1 g/L | 15.0 / 1.0 mM                  |
| Iso-Valeric acid²               | 1.5 / 0.1 g/L | 15.0 / 1.0 mM                  |
| Sodium lactate (60% w/v)¹       | 10 mL/L       | 53.5 mM                        |
| Resazurin                       | 1.00 mg/L     | 4.4 nM                         |
| CO₂ (v/v)                       | 100 %         | 100 % gas phase                |
| Vitamin solution³               | 0.1 mL/7 mL   | (per Hungate tube)             |

¹ These ingredients were omitted in the M2-B medium. ² Short-chain fatty acid supplements for M2-A and M2-B. Left-hand values refer to the addition of single SCFAs to M2-A. Concentrations of combined SCFA supplementation to M2-B are given on the right. ³ Composition of vitamin solution see Table A1.
### Table S3. Optical density and pH of cultivations for LCFA harvesting.

| Cultivation Conditions | Pre (1) | Pre (2) | Main | Mean ± SD of OD<sub>600</sub> | pH Sample | pH Blank | ∆pH |
|------------------------|---------|---------|------|-----------------------------|-----------|----------|------|
| 8 h incubation          |         |         |      |                             |           |          |      |
| Acet                   | 1.26    | 1.40    | 1.64 | 1.44 ± 0.19                 | 5.17      | 6.51     | 1.34 |
| Prop                   | 1.33    | 1.51    | 1.68 | 1.50 ± 0.17                 | 5.18      | 6.50     | 1.32 |
| But                    | 1.46    | 1.27    | 1.58 | 1.43 ± 0.16                 | 5.20      | 6.53     | 1.33 |
| iBut                   | 1.28    | 1.15    | 1.25 | 1.23 ± 0.07                 | 5.73      | 6.58     | 0.85 |
| Val                    | 1.71    | 1.70    | 1.77 | 1.73 ± 0.04                 | 5.08      | 6.55     | 1.47 |
| iVal                   | 1.11    | 1.11    | 1.27 | 1.16 ± 0.09                 | 6.15      | 6.71     | 0.56 |
| 24 h incubation         |         |         |      |                             |           |          |      |
| Acet                   | 1.68    | 1.63    | 1.70 | 1.67 ± 0.04                 | 5.19      | 6.57     | 1.38 |
| Prop                   | 1.62    | 1.38    | 1.91 | 1.64 ± 0.26                 | 4.93      | 6.50     | 1.57 |
| But                    | 1.63    | 1.52    | 1.82 | 1.66 ± 0.15                 | 4.92      | 6.53     | 1.61 |
| iBut                   | 1.62    | 1.59    | 1.71 | 1.64 ± 0.06                 | 5.17      | 6.66     | 1.49 |
| Val                    | 1.73    | 1.67    | 1.92 | 1.77 ± 0.13                 | 4.93      | 6.55     | 1.62 |
| iVal                   | 1.15    | 1.64    | 1.82 | 1.54 ± 0.34                 | 5.45      | 6.50     | 1.05 |

The cultivations are divided into Pre- and Main cultivations and with incubation time of 8 or 24 h. Pretreatments 1 and 2 represent the chronological order, followed by the main treatment. Mean and standard deviation (SD) of optical density were calculated for each condition (n=3). High SD at 24 h for iVal and Prop indicate deviation in inoculation composition or differences in adaptation time. Acidification is described as ∆pH and calculated as the difference between the pH at the start (blank) and the end of the incubation time (sample).
The cultivation parameters like mean optical density of pre- and main culture (OD; n=3), the OD of the respective main culture and the acidification (n=3) were correlated with the LCFA type in the manner of Pearson to obtain the correlation coefficient (R).

Table S4. Numbers of peptides and proteins determined by LC-MS/MS measurements.

| Replicate | Acet | Prop | But | iBut | Val | iVal | Total peptides detected | Proteins detected |
|-----------|------|------|-----|------|-----|------|-------------------------|------------------|
| A         | 21,144 | 21,988 | 21,599 | 22,041 | 20,511 | 21,025 |                         |                  |
| B         | 21,389 | 21,721 | 21,575 | 22,127 | 21,110 | 21,620 |                         |                  |
| C         | 21,660 | 22,023 | 22,160 | 21,693 | 20,872 | 20,667 |                         |                  |
| A         | 1,539 | 1,580 | 1,588 | 1,577 | 1,519 | 1,534 |                         |                  |
| B         | 1,550 | 1,580 | 1,566 | 1,578 | 1,554 | 1,543 |                         |                  |
| C         | 1,570 | 1,589 | 1,599 | 1,567 | 1,537 | 1,518 |                         |                  |

Table S5. Cultivation parameters and relative amounts of trait specific long chain fatty acids.

| Time  | Condition | Acidification | Main OD | Mean OD | Branching | Chain length |
|-------|------------|---------------|---------|---------|-----------|--------------|
|       |            |               | anteiso | iso     | linear    | odd          | even         |
| 8 h   | Acet (C2 even) | 1.34         | 1.64    | 1.44    | 38.7%    | 36.3%        | 25.0%        | 5.7%         | 94.3%        |
|       | Prop (C3 odd)   | 1.32         | 1.68    | 1.50    | 31.0%    | 34.3%        | 34.7%        | 17.2%        | 82.8%        |
|       | But (C4 even)   | 1.33         | 1.58    | 1.43    | 31.4%    | 30.8%        | 37.7%        | 5.9%         | 94.1%        |
|       | iBut (C4 odd)   | 0.85         | 1.25    | 1.23    | 26.7%    | 61.0%        | 12.3%        | 37.9%        | 62.1%        |
|       | Val (C5 odd)    | 1.47         | 1.77    | 1.73    | 30.8%    | 20.2%        | 49.0%        | 30.9%        | 69.1%        |
|       | iVal (C5 even)  | 0.56         | 1.27    | 1.16    | 37.0%    | 39.0%        | 24.0%        | 7.9%         | 92.1%        |
| 24 h  | Acet (C2 even) | 1.38         | 1.70    | 1.67    | 21.0%    | 56.2%        | 22.8%        | 5.7%         | 94.3%        |
|       | Prop (C3 odd)   | 1.57         | 1.91    | 1.64    | 31.5%    | 30.3%        | 38.2%        | 17.2%        | 82.8%        |
|       | But (C4 even)   | 1.61         | 1.82    | 1.66    | 29.6%    | 27.1%        | 43.4%        | 5.9%         | 94.1%        |
|       | iBut (C4 odd)   | 1.49         | 1.71    | 1.64    | 16.8%    | 71.3%        | 11.9%        | 37.9%        | 62.1%        |
|       | Val (C5 odd)    | 1.62         | 1.92    | 1.77    | 33.0%    | 19.4%        | 47.6%        | 30.9%        | 69.1%        |
|       | iVal (C5 even)  | 1.05         | 1.82    | 1.54    | 27.9%    | 53.0%        | 19.1%        | 7.9%         | 92.1%        |

The Pearson correlation coefficients for the relationship between mean OD and LCFA type, main OD and LCFA type, and acidification and LCFA type are as follows:

- Mean OD vs. LCFA type: -0.33, -0.29, 0.53, 0.16, -0.16
- Main OD vs. LCFA type: -0.12, -0.38, 0.54, -0.05, 0.05
- Acidification vs. LCFA type: -0.21, -0.37, 0.57, 0.11, -0.11
Prevotella was incubated with different SCFA, for incubation times at 8 and 24 h. The incubated SCFAs were iso-valeric acid (iVal), valeric acid (Val), iso-butyric acid (iBut), butyric acid (But), propionic acid (Prop) and acetic acid (Acet). The description of the long-chain fatty acids (LCFA) is described by the possible position of methylation, the number of linear carbon atoms behind the letter C and the corresponding type iso or anteiso in brackets.

| LCFA (branching) | Relative amount of LCFA [%] in conditions |
|------------------|----------------------------------------|
|                  | Acet | Prop | But  | iBut | Val  | iVal |
| 8 h              |      |      |      |      |      |      |
| 11-Me C12:0 (iso)| 2.5  | 3.0  | 2.1  | 2.3  | 1.4  | 4.0  |

Acetic acid (C2), propionic acid (C3), butyric acid (C4), isobutyric acid (iC4), valeric acid (C5) and isovaleric acid (iC5) are displayed in mM for each approach in triplicate (n=3) with one blank (n=1). An inaccuracy of ±1.5 mM can be expected. The number of blanks in the table is depending if the cultivation for 8 or 24 h was performed in one or two runs.

Duplicates are indicated by (A) or (B), each n=1. The glucose is given in milli molar and was determined enzymatically. Optical density (OD) was measured at 600 nm wavelength. Dry mass was calculated by mass(vessel) - mass(vessel + dry cells).
Figure S1. Cultivation of *P. bryantii* B4 in M2-A medium in the presence of various short-chain fatty acids for subsequent proteome analyses. Growth curve of *P. bryantii* culture (A) without SCFAs (None), acetic acid (Acet), propionic acid (Prop) and a second growth curve for better illustration (B) with butyric acid (But), iso-butyric acid (iBut), valeric acid (Val) and iso-valeric acid (iVal). Symbols represent the mean values of biological triplicates with errorbars as standard deviation.
Figure S2. Count of maximal abundant COGs per SCFA supplementation.
Proteins which were maximal expressed among all cultures were counted and grouped by their functionality using the cluster of orthologous groups (COGs). Colors indicate the number of proteins with maximal abundance within a COG and cultivation condition. The color code is illustrated at the bottom of the graph. COGs are explained on the right side. Proteins with multiple COG assignments can also be found.
### Count of least abundant COGs per SCFA culture

- 22: Nuclear structure
- 23: Cytoskeleton

**Figure S3.** Count of least abundant COGs per culture conditions. Proteins which were least expressed among all cultivation conditions were counted and grouped by their functionality using the cluster of orthologous groups (COGs). Colors indicate the number of proteins with minimal abundance within a COG and SCFA. The color code is illustrated at the bottom of the graph. COGs are explained on the right side. Proteins with multiple COG assignations can also be found.

**Figure S7.** Heat map of most abundant outer membrane proteins. Label-free quantification (LFQ) values are related and standardized by the Acet culture and represent the average abundance in form of a heatmap, see color code below. In cases where Acet is zero, proteins from the cultivation condition with the lowest abundance were set to one. Proteins written in red font indicate proteins involved in iron transport. The UniprotKB is given in brackets after the protein name.
## Acet and Val specific proteins

| COG | Name (UniProt ID)                                                                 | Acet | Prop | But | iBut | Val | iVal |

**Figure S8.** Acet and Val culture specific proteins. Label-free quantification (LFQ) values are related and standardized by the Acet culture and represent the average abundance in form of a heatmap, see color code below. In cases where Acet is zero, proteins from cultivation condition with the lowest abundance were set to one. Proteins written with a red font indicate proteins involved in iron transport. The UniProtKB is given in brackets after the protein name. Proteins are sorted by the major clusters of orthologous groups (COGs). COG functions: membrane and cell wall assembly (M), inorganic transport (P) and unknown function (S).
Figure S9. Percentile distribution of long-chain fatty acids (LCFA) by traits of chain length and branching structure after 8 h incubation. The distribution of the trait with odd or even number of the straight chain length of carbon atoms is shown in bluish colors (upper). The chain length trait divides the fatty acid length in even for Acet, But and iVal and odd for Prop, iBut and Val. The distribution of non-branched (linear), iso- or anteiso methylated long-chain fatty acids are in yellow-greenish colors (lower). SCFAs are grouped by the branching trait in linear for Acet, Prop, But, Val and in iso for iBut and iVal. The two traits are calculated by the sum of the percentile appearance in the LCFA-profile.
**Figure S10.** Percentile distribution of long-chain fatty acids (LCFA) by traits of chain length and branching structure after 24 h incubation. The distribution of the trait with odd or even number of the straight chain length of carbon atoms is shown in bluish colors (upper). The chain length trait divides the fatty acid length in even for Acet, But and iVal and odd for Prop, iBut and Val. The distribution of non-branched (linear), iso- or anteiso methylated long-chain fatty acids are in yellow-greenish colors (lower). SCFAs are grouped by the branching trait in linear for Acet, Prop, But, Val and in iso for iBut and iVal. The two traits are calculated by the sum of the percentile appearance in the LCFA-profile.
Figure S11. iVal cultivation of P. bryantii B4 in Hungate tubes. Cell pellet formation at the bottom of the tube and aggregate formation at the wall of the tube. Cells in other cultivation conditions are homogenously distributed.
Figure S12. Growth curve of cultures transferred into SCFA-free media. Media composition was similar except the addition of any SCFAs. Inoculation and transfer volume: 4% (v/v). Optical density measurements were conducted in Hungate tubes at a wavelength of 600 nm. Time axis is compressed from 10 to 50 h after inoculation.
Figure S13. KEGG pathway of porphyrin and chlorophyll metabolism found in all cultivation conditions. The fields with red letters represent the found enzymes from all cultivation conditions combined. The pathway is completed from L-glutamate down to protoporphyrin IX. The orange marked enzyme is the one which annotation is missing to form heme.
