Spontaneous splenic rupture without trauma: A case report

Mürşit Dincer, Ahmet Kocakuşak, Gamze Çitlak, Ekrem Ferlengez, Muzaffer Akinci

ABSTRACT

Spontaneous splenic rupture is a rare ill-defined clinicopathological entity and occurs in only 1% of all splenic ruptures. It occurs usually as a result of splenic infiltration by infectious or hematological diseases. We present a case of 36-year-old female who was admitted to our emergency department with a three-hour history of acute onset abdominal pain and dyspnea. There was no history of trauma and infectious or hematological diseases. Considering the hemodynamic instability an emergent laparotomy was performed. During laparotomy, a 5-cm splenic laceration was found and a splenectomy was performed. The histology report confirmed that there was no pathological cause of splenic rupture.

INTRODUCTION

Spontaneous splenic rupture is a life-threatening abdominal emergency. Spontaneous splenic rupture without a history of trauma is very uncommon [1]. It occurs in only 1% of all splenic ruptures. Atraumatic splenic rupture usually occurs due to infectious, hematological, or malignant infiltration of spleen [2]. Its etiology and management are unclear [3]. Nonetheless, emergency splenectomy is the standard treatment for patient with spontaneous splenic rupture [4].

CASE REPORT

A 36-year-old female was admitted to our emergency department with a three-hour history of acute onset abdominal pain and dyspnea. There was no history of trauma and infectious or hematological diseases. On examination, her pulse was 88/minutes with systolic blood pressure 85/60 mmHg, oxygen saturation of 95%. There was guarding over the left hypochondrium and epigastrium. Initial blood tests showed hemoglobin of 7.8 g/dl, hematocrit of 23.9% with normal coagulation profile. Abdominal sonography showed presence of free fluid around the spleen. Computed tomography scan confirmed the peri-splenic hematoma (Figure 1). The
The patient was monitored in our clinic. Intravenous fluids and empirical antibiotics were given. A total of two units of red blood cells were given. Repeat blood tests showed hemoglobin of 7.5 g/dl, hematocrit of 23.3%. Considering the hemodynamic instability and persistent pain, surgical intervention was decided. Laparotomy revealed 3000 cc of blood in the abdomen and a 5-cm splenic laceration were found. During the surgery a total of three units of red blood cells and three units of fresh frozen plasma were given. A splenectomy was performed. She was discharged with no problem on day-4. The histology report confirmed that there was no pathological cause of splenic rupture.

**DISCUSSION**

Spontaneous splenic rupture occurs mostly in a spleen due to infectious hematological or malignant infiltration. Spontaneous splenic rupture without a history of trauma is an uncommon entity. This serious clinical event which warrants immediate intervention is mostly in the form of operative surgery to save life [2, 5]. In spite of that, it has been reported in literature that a less invasive approach as proximal splenic artery embolization may be a safe, successful therapeutic alternative in selected patients [6].

**CONCLUSION**

In conclusion, spontaneous splenic rupture without a history of trauma is an uncommon life-threatening abdominal emergency. The pathogenesis of the disease remains unclear. In patients with atraumatic left hypochondrial pain and low hemoglobin, splenic rupture should be kept in mind.

Edorium Journals: An introduction

Edorium Journals Team

About Edorium Journals
Edorium Journals is a publisher of high-quality, open access, international scholarly journals covering subjects in basic sciences and clinical specialties and subspecialties.

Invitation for article submission
We sincerely invite you to submit your valuable research for publication to Edorium Journals.

But why should you publish with Edorium Journals?
In less than 10 words - we give you what no one does.

Vision of being the best
We have the vision of making our journals the best and the most authoritative journals in their respective specialties. We are working towards this goal every day of every week of every month of every year.

Exceptional services
We care for you, your work and your time. Our efficient, personalized and courteous services are a testimony to this.

Editorial Review
All manuscripts submitted to Edorium Journals undergo pre-processing review, first editorial review, peer review, second editorial review and finally third editorial review.

Peer Review
All manuscripts submitted to Edorium Journals undergo anonymous, double-blind, external peer review.

Early View version
Early View version of your manuscript will be published in the journal within 72 hours of final acceptance.

Manuscript status
From submission to publication of your article you will get regular updates (minimum six times) about status of your manuscripts directly in your email.

Our Commitment

Six weeks
You will get first decision on your manuscript within six weeks (42 days) of submission. If we fail to honor this by even one day, we will publish your manuscript free of charge.*

Four weeks
After we receive page proofs, your manuscript will be published in the journal within four weeks (31 days). If we fail to honor this by even one day, we will publish your manuscript free of charge and refund you the full article publication charges you paid for your manuscript.*

Favored Author program
One email is all it takes to become our favored author. You will not only get fee waivers but also get information and insights about scholarly publishing.

Institutional Membership program
Join our Institutional Memberships program and help scholars from your institute make their research accessible to all and save thousands of dollars in fees make their research accessible to all.

Our presence
We have some of the best designed publication formats. Our websites are very user friendly and enable you to do your work very easily with no hassle.

Something more...
We request you to have a look at our website to know more about us and our services.

* Terms and condition apply. Please see Edorium Journals website for more information.

We welcome you to interact with us, share with us, join us and of course publish with us.
