ERRATUM

Erratum to: The influence of a CYP1A2 polymorphism on the ergogenic effects of caffeine

Christopher J Womack1*, Michael J Saunders1, Marta K Bechtel2, David J Bolton1, Michael Martin1, Nicholas D Luden1, Wade Dunham2 and Melyssa Hancock2

Correction
Following publication of this article [1], we recently noticed that two subjects in this study were not assigned to the correct genetic groups. One of the AA homozygotes was incorrectly entered as a C allele carrier and we had the opposite situation for a second subject.

We have re-run the primary statistical analysis with the subjects assigned to their correct groups. The corrected analysis produced very similar results to our initial, published findings as we observed a significant treatment effect and a significant genotype x treatment interaction due to a higher degree of response in the AA homozygotes.

Correcting our dataset did result in very slight differences in the mean values for 40 k time. The changes are presented in Table 1.

| Genotype | Placebo | Caffeine |
|----------|---------|----------|
| A. Original Data: 40-km cycling time for Placebo and Caffeine conditions for AA homozygotes and C-allele carriers |
| AA       | 76.1 +/- 5.8 min | 72.4 +/- 4.2 min |
| C        | 72.2 +/- 4.2 min | 70.4 +/- 4.3 min |
| B. Corrected Data: 40-km cycling time for Placebo and Caffeine conditions for AA homozygotes and C-allele carriers |
| AA       | 75.1 +/- 6.1 min | 71.6 +/- 4.3 min |
| C        | 73.1 +/- 4.5 min | 71.6 +/- 4.4 min |
