Supplementary Figures for

The Beta Subunit of Non-Bifurcating NADH-Dependent [FeFe]-Hydrogenases
Differ from Those of Multimeric Electron-Bifurcating [FeFe]-Hydrogenases

Nathaniel A. Losey, Saroj Poudel, Eric S. Boyd, and Michael J. McInerney

Supplementary Figure S1. SDS-PAGE Gel of Recombinant S. aciditrophicus HydAB
Purified from E. coli. Lane 1, molecular weight markers; Lane 2, E. coli cell-free extract; Lane 3, HydAB fraction. Molecular weights listed on gel image were predicted from the encoding gene sequence.
Supplementary Figure S2. Native PAGE Analysis of Recombinant *S. aciditrophicus* HydAB Purified from *E. coli*. Lane 1, molecular weight markers; Lane 2, *E. coli* cell-free extract; Lane 3, HydAB fraction.
Supplementary Figure S3. SDS-PAGE of Recombinantly Produced *S. aciditrophicus* Ferredoxin from *E. coli* and Ferredoxin Partially Purified from *S. aciditrophicus*. Lane 1. molecular weight markers; Lane 2. nickel affinity purified recombinant SYN_03059 gene product; Lane 3. partially purified ferredoxin fraction from *S. aciditrophicus* cells.
Supplementary Figure S4. Production of Hydrogen from NADH by HydAB in the Presence of Reduced Ferredoxin-Generating System. The reduced ferredoxin-generating system and HydAB (25.4 μg) were added as indicated by Fd<sub>red</sub> and +HydAB, respectively. NADH was added as indicated by +NADH. The maximal rate of hydrogen production was 24.6 nanomoles • min<sup>-1</sup> • mg<sup>-1</sup>. 
Supplementary Figure S5. Hydrogen Partial Pressures During the Metabolism of Crotonate, Cyclohex-1-ene-1-Carboxylate, and Benzoate By Pure Cultures of *S. aciditrophicus* and Co-Cultures of *S. aciditrophicus* with *Methanospirillum hungatei*. Panels A, B and C: hydrogen and substrate concentrations for metabolism of crotonate (A), cyclohex-1-ene carboxylate (B), and benzoate (C) by pure cultures of *S. aciditrophicus*. Panels D, E, and F: hydrogen and substrate concentrations during the metabolism of crotonate (D), cyclohex-1-ene carboxylate (E), and benzoate (F) by co-cultures of *S. aciditrophicus* with *M. hungatei*. (A) 97.8 ± 9.8 nmol, (B) 127.5 ± 6.9 nmol, (C) 72.2 ± 9.8 nmol, (D) 57.4 ± 9.1 nmol, (E) 56.8 ± 7.3 nmol, (F) 46.9 ± 28.8 nmol.
Figure S6. Phylogenetic Comparison of BF and non-BF NADH Dependent Beta Subunits
