Appendix A

ANDEXXA® [coagulation factor Xa (recombinant), inactivated-zhzo]

Use Parameters:
- Patients taking apixaban or rivaroxaban and in need of anticoagulation reversal due to life-threatening or uncontrolled bleeding (e.g. bleeding into a critical area or organ, or unresponsive to supportive care)
- Last dose of apixaban or rivaroxaban taken within the last 18 hours
- ANDEXXA is not approved to facilitate surgical procedures in the absence of bleeding
- Requests for use of ANDEXXA must be approved by a pharmacist in one of the below fields and/or hematology to ensure appropriate use per criteria
  - Approving pharmacist fields: emergency department (ED), intensive care unit (ICU), operating room (OR), and anticoagulation (AC) service

Dose Information:

Based on the specific factor Xa inhibitor, dose and time since the patient’s last dose of factor Xa inhibitor. No dose adjustments are necessary for renal or liver impairment.

| Drug     | Factor Xa inhibitor last dose | Timing of factor Xa inhibitor last dose before ANDEXXA initiation |
|----------|-------------------------------|---------------------------------------------------------------|
|          |                               | < 8 hours or unknown | ≥ 8 hours         |
| Rivaroxaban | ≤ 10 mg           | Low dose            | Low dose          |
|           | > 10 mg or unknown | High dose           |                    |
| Apixaban  | ≤ 5 mg               | Low dose            |                    |
|           | > 5 mg or unknown   | High dose           |                    |

ANDEXXA is administered as an IV bolus at a target rate of 30 mg/min immediately (within 2 minutes) followed by a continuous IV infusion for up to 120 minutes. There are two dosing regimens:

| Dose   | Initial IV bolus                      | Follow-on IV infusion                  |
|--------|--------------------------------------|----------------------------------------|
| Low dose | 400 mg at a target rate of 30 mg/min | 4 mg/min for up to 120 minutes         |
| High dose | 800 mg at a target rate of 30 mg/min | 8 mg/min for up to 120 minutes         |

Ordering Process:
- Providers entering ANDEXXA order will be prompted to call either the ICU, OR, or ED pharmacist
- Provider will contact the pharmacist and discuss the patient’s need for Xa inhibitor reversal. After discussion with the provider and chart review the pharmacist will:
  - If criteria are clearly met the pharmacist will order ANDEXXA
  - If criteria are not met or unclear the pharmacist is to call the AC service for a discussion
    - AC service is available during normal business hours Monday through Friday
    - During off hours inpatient hematology service is to be paged for patient review
