Table S1 Fragments of LRP and RAP used in the present study

| Construct | Residues          |
|-----------|-------------------|
| CR34      | Gln<sup>833</sup>–Tyr<sup>914</sup> |
| CR45      | His<sup>874</sup>–Tyr<sup>954</sup> |
| CR56      | Arg<sup>915</sup>–His<sup>994</sup> |
| CR78      | His<sup>994</sup>–Gly<sup>1080</sup> |
| CR89      | Gly<sup>1081</sup>–Ser<sup>1123</sup> |
| CR345     | Gln<sup>833</sup>–Tyr<sup>954</sup> |
| CR456     | His<sup>874</sup>–His<sup>994</sup> |
| CR567     | Arg<sup>915</sup>–Asn<sup>1034</sup> |
| CR678     | Pro<sup>955</sup>–Gly<sup>1080</sup> |
| RAP D1    | Tyr<sup>1</sup>–Leu<sup>12</sup> |
| RAP D2    | Asp<sup>113</sup>–Glu<sup>215</sup> |
| RAP D3    | Arg<sup>206</sup>–Leu<sup>323</sup> |

*The residue numbering corresponds to that of the mature protein. The expressed fragments contain an additional N-terminal Gly-Ser extension resulting from the use of a BamHI site in cloning.
