Fig. S1 Subject disposition.
**Fig. S2** Effect of water volume with dosing on (a) \( \text{AUC}_{0-6\text{h}, \text{SNAC}} \) and (b) \( \text{C}_{\text{max}, \text{SNAC}} \) after a single dose of 10 mg oral semaglutide in healthy male subjects.

Bars are estimated means and 95% confidence intervals. Treatment comparisons show estimated treatment ratios [95% confidence interval] and p-value. Endpoints were analyzed on logarithmic scale but are presented on linear scale. \( n=24 \) (50 mL) or \( n=26 \) (240 mL). \( \text{C}_{\text{max}} \), maximum concentration.
