Abstract

Over the past few years, the Persian and English translations of Quran have been studied from different standpoints throughout the centuries, Muslim and non-Muslim translators have been very concerned to convey the meaning of the Quran into languages other than Arabic. The holy Quran is a divine book and its translation into other languages must be done meticulously. In this regard, Persian and English translation of one of the surahs of this magnificent book was selected to be compared. The present study has gone through the investigation of the Persian translation of one of the surahs of this holy book “Yasin” by Dr. Elahi Ghomshei (1361) and its English translation by three famous translators Yusuf Ali (2000), Pickthall (1930) and Sarwar (2011) to see discrepancies. Also, this study tries to find out the unit of translation and classify different kinds of Vinay and Darbelnet’s procedures used by the English translators.

Keywords: Quran translation, Vinay, Darbelnet, Yasin, unit of translation.

INTRODUCTION

Aiming at guiding mankind into the right path, Holy Quran like other Religious texts has a very significant role in the life of man. Now, the question is how Quran’s universal message should be conveyed to the people. The answer is translation. Huge number of Muslims read the English translations of this Holy Book. So it seems necessary to pay due attention to the way these translations are done in different languages especially English. It’s the translators’ duty to try their bests in order to convey the same meaning into the target languages. In other words, the readers have no choice but to rely on a given translator’s faithful rendition.

Different Shiite scholars and clergymen translated this holy book into Persian which is now widespread in Iran and English has also been widespread throughout the world. Due to the critical need for an accurate and clear translation, academic research must be carried out in this domain. Therefore, as a sample, the present study has gone through the investigation of the Persian translation of one of the surahs of this holy book “Yasin” by Dr. Elahi Ghomshei and its English translation by three famous translators “Yusuf Ali”, “Pickthall” and “Sarwar” to see discrepancies. Also, this study tries to find out the unit of translation and classify different kinds of Vinay and Darbelnet’s procedures used by the English translators.

REVIEW OF THE LITERATURE

Over the past, the Persian and English translations of Quran have been studied from different standpoints. In this regard, the following studies are worth mentioning: Zolfaqari [1] studies the reflection of the Quran in Persian proverbs. He reveals the reflection of signs in Persian proverbs in one of the underlying forms: 1) application of the original sign, 2) application of the content of sign, 3) using the words compositions, terms or Quranic interpretation or a part of the sign, 4) allusion of Quranic stories. His study shows that in every 3000 unrepeat published Persian proverbs, the direct effect of about 900 signs of Quran on 3 percent of these proverbs is clear, and that Most of the effective signs on proverbs are among the famous signs or in the 30th part of Qur'an.

Muhammed [2] concentrates on the errors of the translators in rendering the euphemistic expressions in the Quran. His aim in the study is to expose those translators who sacrifice euphemism at the expense of the original meaning and to reveal to what extent these wrong translations affect the understanding of the meaning. He...
concludes those who mention the euphemism followed by a paraphrase are the best translators as make it easy for the target receivers to understand the intended meaning.

Abdelwali [3] examines the challenges that Quranic translators encounter at the lexical, structural /stylistic, and rhetorical levels. His study of existing English versions of the Quran shows that the communication of the message without considering the idiosyncrasies and prototypical features of the Quranic discourse is most translators’ aim. He concludes that the versatility of Quranic lexemes and styles were not seen in most of the English versions of the Quran.

Elhindi [4] in his paper categorized and explained the impoortance of metaphors in the Quran and proposed a cognitive approach regarding Lakoff and Johnson principles of the conceptual metaphor theory as a framework. His study focuses on spatial and temporal Quranic metaphors and investigates how they are used to help enhance the interpretation of specific concepts. Furthermore, he addressed the difficulty of translating Arabic metaphors into English and also shows how some of the English translations of metaphors fail to render some of the subtle meanings in the Arabic version.

Roozegar [5] in her thesis investigated the collocations of Quran and their translations into English and compared 7 English translations with its Persian counterpart and concluded that literal translation was the most frequent method applied by the translators. Farahani [6] in his thesis discussed the methods that Quranic names were translated into English and the difficulty the translators faced in rendering these names. He studied three English translations and investigated the strategies adopted by the translators to find out the consistency in rendering these divine names.

Being one of the fundamental concepts always argued about in the realm of translation, the unit of translation (UT) has been given various definitions by different theorists. Shuttleworth and Cowie [7] define it as: "a term used to refer to the linguistic level at which ST is recodified in TL" (p. 192). Barkhudarov [8] defines a UT as "the smallest unit of SL which has an equivalent in TL" [7].

Phonemes, morphemes, words, phrases, sentences and entire texts are probable units of translation for him. What determines the appropriate UT, is the wording at a given point in ST. In Koller terms [9, 10], while closeness of SL and TL involves smaller UTs, translating from a SL which is not that much related to TL will usually result in choosing larger units.

Vinay and Darbelnet [11] totally draw on the concept of word as a basis for UT. They argue that what should be identified and distinguished as a unit for a translator, who's translating thoughts and concepts, is a unit of thought. Vinay and Darbelnet consider three following terms as being equivalent: "unit of thought", "lexicological unit" and "unit of translation". What they suggest as a definition for UT is "the smallest segment of the utterance whose signs are linked in such a way that they should not be translated literally" [12, 13].

**Methodology**

Major examples of linguistic theories of translation include Vinay and Darbelnet’s, inspired by Saussurean linguistics, Catford’s, influenced by an early version of Halliday’s systemic functional linguistics.

Having identified the linguistic concepts that they consider relevant to translation, Vinay and Darbelnet [11] turn their attention to the work of translators … the units they work with, the different planes of language at which these units operate, and finally, the methods which allow the transfer from one language to another (emphasis original).

They point out that “the word on its own is unsuitable for consideration as the basis for a unit of translation” [11]. This is because the word is rarely the unit that signifies, and because meaning, which is what translators are concerned with, is not tied to any formal unit at all. Units of translation are, rather, “lexicological units within which lexical elements are grouped together to form a single element of thought” Vinay and Darbelnet [11]. There follows a long list of types of units (pp. 22–27), a discourse on the three planes of external stylistics, which are the lexicon, the syntactic structures, and the message (pp. 27–30). Compare the differences between English and French they identify two translation techniques that somewhat resemble the literal and free methods [11]. Direct (literal) translation discusses three possible strategies:

- **Literal translation or word-for-word**

  Vinay and Darbelnet say this translation method is only to be used under certain circumstances, i.e. translating word for word in a way that does not alter the meaning is considered an acceptable use of literal translation by the two scholars.
• Calque, where the SL expression by considering its syntax is literally translated into the TL.
• Borrowing – when discussing a new technical process for which no term exists within the TL, or when maintaining a word from the SL for stylistic effect, and for adding flavor to the target text (TT) the SL word is transferred directly into the TL and maintaining it in the target language.

Oblique (free) translation covers four strategies:
- Transposition – interchange of parts of speech that don’t affect the meaning, i.e. changing word class without changing meaning.
- Modulation – reversal of point of view (it isn’t expensive / it’s cheap). Modulation refers to rendering the TT from a different point of view to that of the ST. it is a way to find a degree of naturalness in TT without sacrificing any meaning or accuracy originating from the ST. Modulation at the levels of message along the following lines [14]:
  - Abstract<>concrete or particular<>general
  - Explicative modulation or effect<>cause
  - Whole<>part
  - Part<>another part
  - Reversal of terms
  - Negation of opposites
  - Active<>passive
  - Rethinking of intervals and limits in space and time
  - Change of symbol

Equivalence – it is something cultural wherein the same meaning conveyed by a different expression, which is most useful for proverbs and idioms

Adaptation – cultural references may need to be altered to become relevant [15].

Research questions
RQ1: What strategies do the translators employ in rendering Yasin surah in English?
RQ2: What is the unit of translation used by each translator?

RESULTS AND DISCUSSION
Based on Vinay and Darbelnet [11] framework, the extracted data in the present study were classified according to the categorizations in the Persian text and the three English renderings. Then, the strategies applied by the three translators in each case were explored thoroughly.

In doing this research, the researcher selected three English translations of the Holy Quran in order to compare and contrast them with the Persian translation text done by “Elahi-qomsheh” (). These three translations were done by Yusuf Ali [16], Sarwar [17], and Pickthall [18].

As it is clear all the three translators used borrowing for the translation of this verse.

S: I swear by Yasin (1)
Y: YaSin. (1)
P: YaSin. (1)

As we can see in the Persian translation of this verse the translators used passive tense while in its English equivalents all the three translators used active voice which according to Vinay and Darbelnet the translators used modulation in this verse.
P: A revelation of the Mighty, the Merciful (5)

In this verse we have change of parts of speech in the Persian we have a verb which is rendered as a noun in English; therefore, we have transposition.

S: so that you may warn a people who are unaware because their fathers were not warned. (6)
Y: In order that thou mayest admonish a people, whose fathers had received no admonition, and who therefore remain heedless (of the Signs of Allah.) (6)
P: That thou mayst warn a folk whose fathers were not warned, so they are heedless. (6)

If one compares the Persian translation with its three English translations, then he might find out that they are not equal in terms of meaning and it can be said that they have semantic difference.

S: (I swear) that most of them are doomed to be punished. They have no faith. (7)

Y: And We have put a bar in front of them and a bar behind them, and further, We have covered them up; so that they cannot see. (9)
P: And We have set a bar before them and a bar behind them, and (thus) have covered them so that they see not. (9)

As it can be considered these English translations have semantic difference with their Persian counterpart.

Y: The same is it to them whether thou admonish them or thou do not admonish them: they will not believe. (10)
P: Whether thou warn them or thou warn them not, it is alike for them, for they believe not. (10)

If one compares and contrasts the Persian and English translations, he will soon understand that in English they used literal translation to convey the same meaning.
In Sarwar translation we have a word in Persian which is a noun but in English we have follow which is a verb so here we have modulation. In Persian we have دارکار تا نایا but in English we have Quran in which the particular translated into a general term Quran so again in this part also we have modulation.

In Yusuf Ali translation we have difference of meaning in comparison to its Persian translation.

In Pickthall we have the literal translation of the Persian counterpart.

As it can be seen in all English translations we have literal translation.

In all the three translations we have negation of opposites which is a modulation procedure.

S: It is We who bring the dead to life and records the deeds of human beings and their consequences (of continual effects). We keep everything recorded in an illustrious Book. (12)
Y: Verily We shall give life to the dead, and We record that which they send before and that which they leave behind, and of all things have We taken account in a clear Book (of evidence). (12)
P: Lo! We it is Who bring the dead to life. We record that which they send before (them, and their footprints. And all things We have kept in a clear Register. (12)

In Sarwar translation we have people and in Persian we have اٰل لزیَ in which the translator used the general term for rendering a particular word so here we have modulation, in the middle part we have mortals for تطز wherein we have modulation for using an abstract item instead of the concrete one and again in the last part of the verse he used modulation for having the negation of opposites.

In Yusuf Ali translation we have revelation for چیش in which the translator brought a particular word for a general word and used modulation in this verse.

In Pickthall like in Sarwar translation the translator used mortals for the word تطز and here also the translator used modulation in the translation and at the end also used negation of opposites.

S: The people said, "You are mere mortals like us and the Beneficent God has sent nothing. You are only liars." (15)
Y: The (people) said: "Ye are only men like ourselves; and ((Allah)) Most Gracious sends no sort of revelation: ye do nothing but lie." (15)
P: They said: Ye are but mortals like unto us. The Beneficent hath naught revealed. Ye do but lie! (15)

In all the three translations we have negation of opposites which is a modulation procedure.

S: The people said, "Our Lord knows that We are Messengers (16)
Y: They said: "Our Lord doth know that we have been sent on a mission to you: (16)
P: They answered: Our Lord knoweth that we are indeed sent unto you, (16) In the three translations all the translators used literal translation.

S: have been sent to you. Our only duty is to preach clearly to you (17)
Y: "And our duty is only to proclaim the clear Message." (17)
P: And our duty is but plain conveyance (of the message). (17)

In all the three translations we have negation of opposites which is a modulation procedure.

S: The people said, "We have ill omens about you. If you will not desist, we shall stone you and make you suffer a painful torment" (18)
Y: The (people) said: "for us, we augur an evil omen from you: if ye desist not, we will certainly stone you. And a grievous punishment indeed will be inflicted on you by us." (18)
P: (The people of the city) said: We augur ill of you. If ye desist not, we shall surely stone you, and grievous torture will befall you at our hands. (18)
In Sarwar translation we have people for so the translator used the general word for the particular item and in the last part also used reversal of terms for rendering the same meaning; therefore, the translator used modulation in both parts.

Yusuf Ali and Pickthall used literal translation in this verse.

If we compare and contrast the Persian translation with its three English translations, we can understand that they have difference in meaning.

In both of the above translations the translators used the literal translation.

In both of the above translations the translators used negation of opposites which is part of a modulation procedure.

As it is clear all the three translators used negation of opposites to convey the same meaning into English; therefore, they used modulation in this verse.
Y: A Sign for them is the earth that is dead: We do give it life, and produce grain therefrom, of which ye do eat.

P: A token unto them is the dead earth. We revive it, and We bring forth from it grain so that they eat thereof;

In both of the above translations the translators used the verb eat for یشّر ّ تق which is a noun so we can say that they used transposition in their translations.

S: produced therein grains from which they eat and established therein gardens of palms trees and vineyards and have made streams flow therein (34)

Y: And We produce therein orchard with date-palms and vines, and We cause springs to gush forth therein: (34)

P: And We have placed therein gardens of the date-palm and grapes, and We have caused prings of water to gush forth therein, (34)

From the above translations it is clear that all the three translators used literal translations for conveying the same meaning in English.

In the above translation the translators used literal translation in rendering the same meaning in English.

In the Persian we have the general term wherein in English the translator used the particular word for rendering the same meaning; thus, he used modulation in this verse.

S: how the sun is not supposed to catch-up with the moon, nor is the night to precede the day. All of them are to float in a certain orbit; (40)

Y: It is not permitted to the Sun to catch up the Moon, nor can the Night outstrip the Day: Each (just) swims along in (its own) orbit (according to Law). (40)

P: It is not for the sun to overtake the moon, nor doth the night outstrips the day. They float each in an orbit. (40)

In the first and the third translations, the translator used literal translation for rendering the same meaning in English.

In the second translation the active voice translated into the passive construction so we can say that the translator used modulation in this verse.

S: and created for them similar things to ride. (42)

P: And have created for them of the like thereof whereon they ride. (42)

In the above translation the translators used literal translation in rendering the same meaning in English.

© 2019 |Published by Scholars Middle East Publishers, Dubai, United Arab Emirates
S: and whenever a revelation out of their Lord's revelations comes to them, they ignore it (46)
P: Never came a token of the tokens of their Lord to them, but they did turn away from it! (46)

The translators used negation of opposites in rendering the verse in translation so the translators used *modulation* in this process.

این منکران قیامت انتظار داشتند که یک سیف صادق [اسرائیل حق] را که [به مرگ] همه را فرا رفته در حالیکه [به کارهای دنیا با در صبحه دویم قیامت]

پایه به بحث و جدل مشغولند. (49)
P: They await but one Shout, which will surprise them while they are disputing. (49)

In this verse the translator used modulation because he used negation of opposites.

و { چون بار دوم } در صورت نمیده شود به ناگاه همه از قیرآها به سوی دخای خود به سرعت می شتابند. (51)

S: When the trumpet is sounded, they will be driven out of their grave into the presence of their Lord. (51)
P: At the trumpet's blast, they shall be brought up to appear before their Lord. (51)

The translator changed symbol in this verse, i.e. modulation.

و گویند: ای وای بر ما، که ما را از خواب‌ها را برانگیخت؟ این همان وعده‌ای محرمان است و رسولان همه راست گفتند. (52)

S: They will say, "Woe to us! Who has raised us up from our graves? This is what the Beneficent God has promised. The Messengers have also spoke the truth" (52)
P: Crying: Woe upon us! Who hath raised us from our place of sleep? This is that which the Beneficent did promise, and the messengers spoke truth. (52)

The blood face type word in the Persian is a noun which in English translations it changed into a verb so transposition is used in this verse.

و ان جز سیف صادق { او یک لحظه بیش } نبایند که ناگاه تمام خلاق محضر به پیشگاه ما حاضر آورده خواهند شد. (53)

S: Only after a single blast of sound, they will all be brought into Our presence (53)
P: It is but one Shout, and behold them brought together before Us! (53)

The first translator used literal translation while the second translator used modulation as he used negation of opposites.

پس در آن روز کمترین ظلمی به هیچکس نشود و جز آنجه عمل کرده ایدا ابادا جزایی نخواهید پافقت. (54)

S: No soul will be in the least bit wronged on that Day and no one will receive any recompense other than what he deserves for his deeds. (54)
Y: Then, on that Day, not a soul will be wronged in the least, and ye shall but be repaid the meeds of your past Deeds. (54)
P: This day no soul is wronged in aught; nor are ye requited aught save what ye used to do. (54)

In the Persian the bold face type words are verb which in the first translation they are translated as a noun in English, so the translator used transposition and modulation because the passive voice was translated into the active voice.

In the second translation like the first one we have English translation with literal translation while the Persian used passive.

In the last English translation, we have negation of opposites and of course modulation.

یختصاب آید { ای آدم زادگان، آیا به شما سفاش نموده‌ام که شیطان را پرستید، زیرا روشن است که او دشمن برگ شماست. (60)
Y: "Did I not enjoin on you, O ye Children of Adam, that ye should not worship Satan; for that he was to you an enemy avowed? (60)
P: Did I not charge you, O ye sons of Adam, that ye worship not the devil - Lo! he is your open foe! (60)

و مرا پرستش کنید، که این راه مستقیم {سعادت‌اتبید} است. (61)

Y: "And that ye should worship Me, (for that) this was the Straight Way? (61)
P: But that ye worship Me? That was the right path. (61)

In the two verses mentioned above the Persian and English translations are equal to each other and the translators used literal translation.

و همانا خلق بسیاری از شما نوع بشر را {این دیو} به گمراهی کشید، آیا عقل و فکر کرت کار نمی بستید ؟ از مکر و فرش قیرآها هر چه زیاد. (62)
P: Yet he hath led astray of you a great multitude. Had ye then no sense? (62)

The bold face type is an expression in Persian and the translator also used an equivalent expression in English so we can say that the translator used equivalence in this verse.

و اگر به‌خواهی هم‌انجام صورت آنها را مسخت کنیم (تا به شکل سگان و بوزپنگان شوند) که هنیک‌اند آن صورت یا آن جا! پتوانند گشته و هنیک‌اند صورت اول) بزرگ‌گیت. (67)

P: And had We willed, we verily could have fixed them in their place, making them powerless to go forward or turn back. (67)

As one compares Persian and English translation of this verse he can easily find out that they are difference in meaning.

تا هر که را زندگه دل است ({یبه‌ایش بند دهد و ازخدا و قیامت) بی‌سناری و بر کافران (ینی به امام حجت) و عده عفاء حتم و لازم گردید. (70)

P: To warn whosoever liveth, and that the word may be fulfilled against the disbelievers. (70)

The bold word in the Persian is a noun while in English a verb is used instead; therefore, the translator used transposition here.

آیا کافران دیدنده که بر آنها به دست (فرتقر) خود از جمله‌ای فرهنگی به‌حجاری خلق کرده تا مالک آنها شودن. (71)

S: Have they not seen what We have created from the labor of Our own hands? We have given them cattle (71)

Y: See they not that it is We Who have created for them - among the things which Our hands have fashioned - cattle, which are under their dominion? (71)

In the first translation we have the general term but in English we have the particular word as a result modulation was used here.

In the second translation an expression is replaced by its equivalent expression in English so here the translator used equivalence in this verse.

و و حیوانات (یبا عظمت و قوت) را مطوع و رام و ساکتی که هنمی ارها سوار شوند و هنمی ارها عدا لنگ کند. (72)

Y: And that We have subjected them to their (use)? of them some do carry them and some they eat: (73)

Here the English translator used reversal of terms to render the same meaning in English, i.e., modulation was used here.

و برای آنها در آن حیوانات مناعق (بی‌مجاری از یوست و پیدای و کرک و غیره) و آسان‌سازی های فراوان (از شیر و ماست و روعن و غیره) هست، آیا شکر

S: From cattle they get milk and other benefits. Will they not then give thanks? (73)

Y: And they have (other) profits from them (besides), and they get (milk) to drink. Will they not then be grateful? (73)

In the first translation a general word in Persian is translated into a particular word in English and in the latter the passive construction in Persian changed into the active construction; thus, in both parts we have modulation.

هرگز ان خداونان کمتری نصارسی به آنها تنگکرد و خود ار مشترکان معبد‌دانان را مهابی حاضر تعلیم کرده‌است که هم‌گی را (در قیمة در آتش

Y: They have not the power to help them: but they will be brought up (before Our Judgment-seat) as a troop (to be condemned). (75)

P: It is not in their power to help them; but they (the worshippers) are unto them a host in arms. (75)

In the first translation the identified part is an effect while in its English counterpart the cause is used instead, the same is true for the second translation so in both parts modulation was used by the translators.

پس سخن این مشترکان تو را مجزون نکن. ما هر چه یاده و آشکار‌گویند همه را می‌دانیم و به گفت‌گر فرشتگان می‌رسیم. (76)

S: Muhammad, let not their words annoy you. We certainly know whatever they conceal or reveal. (76)

P: So let not their speech grieve thee (O Muhammad). Lo! We know what they conceal and what proclaim. (76)

In the above translations the translators used literal translation to convey the meaning.

فرمان نافذ او چون اراده خلق خواست چکیک دکه به محض این‌گونه گوید: "موجود باش" (بلایالماله موجود خواهد شد. (82)

S: Whenever He decides to create something He has only to say, "Exist," and it comes into existence. (82)
In the Persian the bold face word is a noun but in English a verb is used instead, so transposition is used in this verse.

س: گلایت که گلایت ملکید و ملکید هر موجود بده دست‌های تو/ و بارگذشته سما همه خلاق بسوم اوست (83)

Y: So glory to Him in Whose hands is the dominion of all things: and to Him will ye be all brought back. (83)

Both used literal translation to convey their meaning into English.

By comparing Persian translation of the Holy Quran and its three English counterparts and according to the data gathered above it can be understood that in: Sarwar translation: the translator mostly used modulation then benefited from literal translation and transposition and borrowing while rendering Yasin into English.

Yusuf Ali Translation: the translator mostly used modulation and literal translation and then transposition and borrowing and equivalence.

Pickthall translation: the translator benefited more from literal translation and modulation then from transposition, borrowing and equivalence.

In verses 6, 8 and 21 there exists discrepancies and difference in meaning between Persian and its three English translations.

In verse 11 there is a discrepancy between Yusuf Ali translation and its Persian counterpart.

In verse 35 the Persian translation was different from Pickthall and Yusuf Ali translation.

In verse 67 there exists a discrepancy between Pickthall and its Persian rendering.

**CONCLUSION**

Therefore, it seems that the selected translators regard modulation and literal translation as the best choices for the translation of Yasin surah. All three translators were so faithful to the meaning of Quran and they consider meaning of each verse as their unit of translation and they were so meticulous on choosing appropriate words for their translations. Furthermore, it can be said that their unit of translation was small which is suitable for translating an expressive and authoritative text such as Quran.
