ABSTRACT

Background: Video gaming has become a most popular leisure activity in many parts of the world, which appears to develop problems as a result of excessive gaming, most commonly among students. The behaviour pattern is of sufficient severity to result in significant impairment in personal, family, social, educational, occupational or other important areas of functioning. In this present context study was done to know the prevalence of addiction to online video games among medical students.

Methods: A cross sectional study was conducted from March 2017 to July 2018 in Katuri Medical College, Guntur among 575 undergraduate medical students including interns. The data was collected using Young’s online gaming addiction scale questionnaire and was analyzed using SPSS 21 version and Epiinfo 7.

Results: In our study, the mean age of students was 22±4 and the average duration of gaming was 3 hours, while students who were addicted to gaming had playtime for 7 hours. Majority of the students used Mobile phones (73.9%), followed by computers (12.2%) for playing games. There was statistical significance between male and female students regarding usage and Problems faced due to video games (p<0.0001, S*).

Conclusions: Gaming disorders are on a rise, which had lead students to psychosocial disturbances, anxiety, depression, mood disorders, sleep disturbances, head ache, lack of social activities, and impairment in education. So, it is time to regulate the usage of Electronic devices, Internet and video games.

Keywords: Video gaming, Addiction, Medical students

INTRODUCTION

Gaming disorder is characterised by craving of the person to play video games. This may affect daily routine activities of the person, along with poor performance in studies, not able to meet the demands in occupation, other areas of important functioning and disturbances in family relationships.

According to world Health organization, gaming disorder is diagnosed after period of at least 12 months, but early in cases of severity in signs and symptoms.1 It has recognized gaming disorder as major problem and has added under International Classification of Diseases 11, i.e. disorders due to substance use or addictive behaviours with a code 6C51.

Physical illnesses like recurrent frequent headaches, nausea, cervical spondylosis due to improper balancing of neck, blurring of vision, dry eyes, early development of cataracts, pain in wrist and interphalangeal joints were attributed to gaming addicts. A study conducted by Caplan et al, revealed that there was cognitive impairment among video game addicts.2 Psychiatric illnesses like mood disorders, anxiety, cravings for gaming, kleptomania, loss of interest etc.
Recently, students were addicted to live streaming games like “Clash of Clans” “Clash Royale” “Mini Militia” and “Players unknown Battle ground [PUBG]”, while certain Video games like “Blue Whale”, “Pokémon” and “Momo Challenge” etc have claimed lives of people who were playing them. So, in this context, this study was conducted to know the prevalence of game addiction among medical students.

Table 1: International comparison of prevalence rates of video game addiction/internet gaming disorder.

| Reference                | Scale used                  | Sample size | Mean age | Prevalence | Country |
|--------------------------|-----------------------------|-------------|----------|------------|---------|

| Khazaal et al¹¹          | 7-item game addiction scale (GAS) | 5,983 | 20 | 2.3 | Switzerland |
| Kim et al¹²              | DSM-5 criteria              | 3,041       | 20–49    | 13.8       | Korea   |

METHODS

This was a cross sectional study conducted from March 2017 to July 2018 in Katuri Medical College, Guntur among 750 undergraduate medical students including interns, 575 students have enrolled in the study. Remaining 175 students were excluded from study, as they don’t play online video games. Young’s internet addiction scale questionnaire was used to collect the data, which contains a Likert scale scored from “0” to “5”. The responses given by each individual student were totalled up and divided into 3 categories based on scores. Data was analysed using Microsoft Excel, SPSS 21 and Epinio 7 software.

Exclusion criteria

175 students were excluded from study, as they do not play online video games.

RESULTS

The mean age of students participated in the study is 22±4 and the average time of Play was 3 hours. However, the students who were having gaming disorder have playtime of 7 hours.

Table 2: Demographic profile of students participated in study.

| Variables                  | Number | Percentage (%) |
|----------------------------|--------|----------------|
| Gender                     |        |                |
| Males                      | 305    | 53             |
| Females                    | 270    | 47             |
| Platform of internet gaming|        |                |
| Mobile Phones              | 425    | 73.9           |
| Computers                  | 70     | 12.2           |
| Gaming Consoles            | 30     | 5.2            |
| Tablets                    | 50     | 8.7            |
The study was done to check whether, there are factors influencing online Internet gaming disorder and disturbances in daily activities. Studies and family relations by using Young’s online gaming addiction scale. In our study, around 23% having occasional disturbances, while, 6% students were experiencing severe disturbances in terms of sleep, concentration on studies, family relations and physical problems like headache, visual disturbances.

The average playtime with students having gaming disorder in the study was 7 hours which is higher than the study conducted by (6.3 hours) Rehbein et al. In our study, the students have admitted of sleeping disturbances, which was similar to other studies done by Hawi et al, Bartel et al and Satghare et al, which was due to late sleeping, waking up in the middle of night for scoring higher levels.7,14,15

Due to increased preoccupation of students with gaming, they complained of having lesser concentration during classes thereby shown poor performance in their studies. Similar findings were seen in studies done by Hawi et al, Rehbein et al and KO et al.2,13,16 In this study, students who were having high scores complained of mood disorders like anxiety, depression, impulsivity and compulsivity, which was similar to the study conducted by Savvidou et al and Zhou et al.17,18

CONCLUSION

Gaming disorders are on a rise, which had lead students to psychosocial disturbances, anxiety, depression, mood disorders, sleep disturbances, head ache, lack of social activities, and impairment in education. These students felt difficulty in coping up in their studies, because they spent more time on gaming and less time on studies, sleep and other activities. The students who are addicted to online video gaming admitted that, they are spending less time with their families and are failing to control emotions with other family members. As well as, these students may develop conditions like dry eyes, early cataracts and deterioration of brain. So, it is time to regulate the usage of electronic devices, internet and video games.

Table 3: Scoring of students.

| S. No | Scoring points | Males | Females | Number of students | Percentage (%) |
|-------|---------------|-------|---------|-------------------|---------------|
| 1     | 20 – 49       | 190   | 220     | 410               | 71.3          |
| 2     | 50 – 79       | 90    | 40      | 130               | 22.6          |
| 3     | 80 – 100      | 25    | 10      | 35                | 6.1           |
| Total |               | 305   | 270     | 575               | 100           |

P value <0.0001; Significant.

DISCUSSION

We are thankful to our Professor and HOD Dr. D. Jagannath Rao, Institutional Ethical Committee and students, who participated in our study.

INTERNET ADDICTION TEST (IAT) BY DR. KIMBERLY YOUNG

Internet addiction test (IAT) is a reliable and valid measure of addictive use of internet, developed by Dr. Kimberly Young. It consists of 20 items that measures mild, moderate and severe level of Internet Addiction.

To begin, answer the following questions by using this scale:-

0 Does not apply
1 Rarely
2 Occasionally
3 Frequently
4 Often
5 Always

| S.No | Question                                                                 | Scale |
|------|--------------------------------------------------------------------------|-------|
| 1    | How often do you find that you stay on-line longer than you intended?    | 1 2 3 4 5 0 |
| 2    | How often do you neglect household chores to spend more time on-line?    | 1 2 3 4 5 0 |
| 3    | How often do you prefer the excitement of the Internet to intimacy with your partner? | 1 2 3 4 5 0 |
| 4    | How often do you form new relationships with fellow on-line users?       | 1 2 3 4 5 0 |
| 5    | How often do others in your life complain to you about the amount of time you spend on-line? | 1 2 3 4 5 0 |
| 6    | How often do your grades or school work suffers because of the amount of time you spend on-line? | 1 2 3 4 5 0 |
| 7    | How often do you check your email before something else that you need to do? | 1 2 3 4 5 0 |
| 8    | How often does your job performance or productivity suffer because of the Internet? | 1 2 3 4 5 0 |
| 9    | How often do you become defensive or secretive when anyone asks you what you do on-line? | 1 2 3 4 5 0 |
| 10   | How often do you block out disturbing thoughts about your life with soothing thoughts of the Internet? | 1 2 3 4 5 0 |
| 11   | How often do you find yourself anticipating when you will go on-line again? | 1 2 3 4 5 0 |
| 12   | How often do you fear that life without the Internet would be boring, empty, and joyless? | 1 2 3 4 5 0 |
| 13   | How often do you snap, yell, or act annoyed if someone bothers you while you are on-line? | 1 2 3 4 5 0 |
| 14   | How often do you lose sleep due to late-night log-ins?                   | 1 2 3 4 5 0 |
| 15   | How often do you feel preoccupied with the Internet when off-line, or fantasize about being on-line? | 1 2 3 4 5 0 |
| 16   | How often do you find yourself saying “just a few more minutes” when online? | 1 2 3 4 5 0 |
| 17   | How often do you try to cut down the amount of time you spend on-line and fail? | 1 2 3 4 5 0 |
| 18   | How often do you try to hide how long you’ve been on-line?               | 1 2 3 4 5 0 |
| 19   | How often do you choose to spend more time on-line over going out with others? | 1 2 3 4 5 0 |
| 20   | How often do you feel depressed, moody or nervous when you are off-line, which goes away once you are back on-line? | 1 2 3 4 5 0 |

Total up the scores for each item. The higher your score, the greater level of addiction is.

20 – 49 points: You are an average on-line user. You may surf the Web a bit too long at times, but you have control over your usage.

50 – 79 points: You are experiencing occasional or frequent problems because of the Internet. You should consider their full impact on your life.

80 – 100 points: Your Internet usage is causing significant problems in your life. You should elevate the impact of the internet on your life and address the problems directly caused by you Internet usage.
