NEW BOOKS AND NEW EDITIONS

ACOUSTIC MEASUREMENTS
By Leo L. Beranek. This new book provides a concise treatment of the entire field of acoustic measurement. It considers the basic facts underlying practically all types of acoustic measurement techniques; discusses the details of the fundamental types of acoustic measuring apparatus; discusses the relative advantages and disadvantages of alternate methods for accomplishing electro-acoustic phenomena; and presents the theory of many electro-acoustic phenomena.

September 1949 Approx. 906 pages Illus. In Press

INTRODUCTION to PARASITOLOGY
With Special Reference to the Parasites of Man
By Asa C. Chandler. A new and completely revised edition which introduces the reader to the increasingly important subject of parasitology. References to parasites other than those of man have been greatly multiplied in this edition, and 50% of the illustrations are new. Included are keys to such groups as the trichostrongylids and the biting and sucking lice of domestic animals, plus a separate chapter on the discussion of Acanthocephala.

8th Ed. September 1949 766 pages 282 illus. Prob. price $6.00

HIGHER ALGEBRA for the UNDERGRADUATE
By Marie J. Weiss. An introduction to some of the simpler algebraic concepts, this book treats such topics as groups, rings, fields, ideals, and matrices equally with the theory of equations. After introducing the number system, the author presents elementary properties of polynomials over a field, matrices over a field, and simultaneous linear equations. The book concludes with a chapter on further properties of groups, rings, and ideals.

June 1949 165 pages $3.75

ADVANCED ORGANIC CHEMISTRY
Second Edition. By G. W. Wheland. This new treatment systematizes the facts of organic chemistry, correlating them with each other and with fundamental theory. The primary and unifying principle of the book is the structural theory in its broadest sense, since this one theory underlies the whole of organic chemistry. Information on the kinetics and mechanisms of important reactions is included. Complete references to the original literature on the subject are given.

2nd Ed. September 1949 799 pages Illus. $8.00

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
SCALING TYPE

GEIGER MÜLLER LABORATORY SET

An effectively designed laboratory instrument featuring an adaptation of the Higginbotham scaling circuit. Accurate performance and easy operation give almost instant results, saving hours of research time. A direct reading decimal decade counting system indicates total counts up to 999,999 or 9,999,999 before recycling. High voltage supply to Geiger tube is electronically regulated. 100 or 1000 scale. Model LS100 (illustrated) only $385. Model LS1000 only $425.

GRADWOHL SCHOOL OF LABORATORY TECHNIQUE
3514 Lucas Av. St. Louis, Mo.
ELEMENTS OF PHYSICS

By ALPHEUS W. SMITH. The Ohio State University. Fifth edition. 745 pages, $5.00

This text is designed to introduce students, intimately and concretely, to physics as a way of thinking. With this end in view, emphasis has been placed on fundamentals with sufficient attention to the applications to make physical principles meaningful and functional. Illustrations and applications have been selected from a wide range of experiences in order to enable the student to see the relation between physical principles and the activities of life.

EXPERIMENTAL PHYSICAL CHEMISTRY

By FARRINGTON DANIELS, J. HOWARD MATHEWS and JOHN WARREN WILLIAMS, University of Wisconsin. International Chemical Series. Fourth edition. In press

Here is a thorough revision of a well known, widely used work. As in the earlier editions, the authors illustrate the principles of physical chemistry, train the student in careful experimentation, develop familiarity with apparatus, give the student confidence in using physical measurements, and encourage ability in research.

PRINCIPLES OF ORGANIC CHEMISTRY

By JAMES ENGLISH, JR. and HAROLD G. CASSIDY, Yale University. International Chemical Series. 512 pages, $5.00

A basic text for the standard undergraduate course, this book presents a selected body of factual and theoretical material, and shows how this carefully chosen material, the result of experiment, is used in the development and practice of the science. An integrated modern treatment has been used throughout, incorporating electronic theories so as to unify the discussion of all topics. A large number of challenging problems are included.

THE SCIENCE OF CHEMISTRY

By GEORGE W. WATT and LEWIS F. HATCH, The University of Texas. 566 pages, $4.50

This text presents adequate and interesting information on chemical science and technology, for students who are not chemistry majors. The various fields of chemistry are covered, with an especially thorough treatment of organic chemistry. Emphasis is on fundamentals. Provides a comprehensive understanding of the science.

INTRODUCTION TO PHYSICS

By HARLEY HOWE, Cornell University. Second edition. 600 pages, $4.50

A thorough revision of a basic physics text for liberal arts students. The features which made the first edition so popular have been retained and the text has been improved by expanding the treatment of a number of subjects and by the addition of new topics. The problems in the second edition are practically all new and appear in greater numbers than in the first edition. Answers to the problems are included at the end of the text.

**ALCONOX** Cleans Better, too

What’s your toughest cleaning problem? Give it to Alconox, the soapless cleaner that works on a new principle. Tests show Alconox removes grit, grease, grime, dirt from hard-to-clean glass, metal, porcelain ware, etc., at least 15% to 12% faster than soap cleaners.

Leaves them sparkling. No film; no streaks. Contains no soap, yet gives rich suds even in hard water. Amazingly economical as to cost and storage. One spoonful makes a gallon of active cleanser.

| Cleans Brilliantly         |         |
|---------------------------|---------|
| Glassware                 | Machine parts |

AT LAST!
A Complete Practical Handbook
Covering the Principles of Infrared
Spectrography In Their Application
to Organic Compounds

INFRARED DETERMINATION OF
ORGANIC STRUCTURE
By Harrison M. Randall, Ph.D.
Emeritus Professor, and Former Chairman of the
Department of Physics, University of Michigan
Richard G. Fowler, Ph.D.
Assistant Professor of Physics, University of Oklahoma
Nelson Fuson, Ph.D.
Department of Chemistry, Johns Hopkins University
And Robert Dangl, M.S., Research Physicist

HERE at last is a comprehensive handbook on the
theory and practical application of infrared spectro-
graphic methods to organic chemistry—to the analysis
and determination of the structure of organic com-
ounds. It integrates the findings of the authors with
reports found in the literature of the last ten years,
and explains the interpretation of this spectrographic
data in terms of organic structure.

Many actual examples, including eleven analyses of “un-
knowns”, are worked out in full detail to guide the
beginner through every step of this new approach to
the problem of organic analysis.

The experimental methods are based upon the authors’
extensive experience, and include every laboratory tech-
nique, from preparation of the sample to manipulation
of the spectrometer. The interpretation of the experi-
mental results is discussed in exhaustive detail by direct
reference to three hundred and fifty-five half-tone re-
productions of photographs of infrared spectra, which
furnish a reference source of inestimable value.

Infrared Spectrography Fully Explained
This book brings together information on infrared
spectrography for every need in science and industry.
It provides in ful1 the facts you must have to carry out
the experimental work, as well as those you need to
interpret its results.

Its contents includes special structure groups (amides,
rings, etc.) and the bands which are associated with
them; and there is a compilation of 355 bands in the 6
mu region (illustrated by half-tones of their spectro-
graphs), as well as a compilation of all the bands result-
ing from fundamental vibrations, of 135 simple mole-
cules which have been analyzed in the literature of the
last ten years.

This immense fund of information, plus all the authors’
experimental background and interpretative experi-
ence, has been organized into this brand-new handbook
to meet every need of everyone working or studying in
this field.

A Much-Needed Aid in Soil Testing
The New LaMOTTE SOIL SAMPLING TUBE
(Hankinson-Hester Design)

This New Soil Sampling Tube has been designed by experts who have had extensive experience and who appreciate the difficulties encountered in taking true soil samples with the ordinary tools available heretofore.

The instrument is sturdy built of non-corrodable metals, light in weight (3½ lbs.) and calibrated in 6" intervals for accurate soil sampling to any depth to 3 ft. It is so designed that the entering soil core passes freely into the upper tube and upon inversion is discharged without "sticking." Plastic Vials (1½" x 6¼") for containing soil samples may also be had.

Personnel Placement

CHARGES and REQUIREMENTS for "PERSONNEL PLACEMENT" Ads

1. Rate: 15¢ per word, minimum charge $3.00 for each insertion. If desired, a "Box Number" will be supplied, so that replies can be directed to SCIENCE for immediate forwarding. Such service counts as 8 words (e.g., a 25-word ad that equals 33 words). All ads will be set in regular, uniform style, without display; the first word, only, in bold face type.

For display ads, using type larger or of a different style than the uniform settings, enclosed with separate border rates, the charge is $15.00 per inch; no extra charge for "Box Numbers".

2. Advance Payment: All Personnel Placement ads, classified or display, must be accompanied by correct remittance, made payable to SCIENCE. Insertion can not be made until payment is received.

3. Closing Date: Advertisements must be received by SCIENCE, 1515 Mass. Ave., N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of each week).

POSITIONS WANTED

Bacteriologist: M.S. with research. Teaching experience. Graduate minor, Organic Chemistry. Box 323, SCIENCE.

Physician: M.S., laboratory assistant 2½ years, bacteriology minor, desires position, research, teaching. Box 319, SCIENCE.

Chemist: 40, B.S. Chemistry; M.S. Zoology; married; 2 years research experience rubber, plastics, synthetic fiber; 1 year H.S. teaching; 3 years medical lab-hospital experience; desires permanent position, preferably midwest. Box 316, SCIENCE.

Mathematician: M.A.; Completing Doctoral dissertation, desires teaching or research position. Box 290, SCIENCE.

Physiologist: Ph.D.; Broad background. Academic (teaching) or hospital appointment. Prefers Philadelphia area, or East. Box 320, SCIENCE.

Psychologist: Ph.D. Munich, several years' experience in America, especially qualified to teach social, abnormal psychology. Wife, former art library assistant, might teach German. P.O.B. 9537, Los Angeles 5, California.

A void DELAY . . . . Cash in Advance payment MUST be enclosed with ALL classified ads. (See "Charges and Requirements")

POSITIONS OPEN

Bacteriologist or Biochemist: (Ph.D. degree) Bacteriologist with experience in biochemistry or biochemist with thorough knowledge of bacteriology. Industrial experience desirable. The position entails research and development of industrial microbial processes; location Metropolitan New York area. State age, education, experience, and salary level. Box 325, SCIENCE.

Chemist wanted by manufacturing concern in N. Y. Metropolitan area, for research and development of products for textile processing and finishing. Work is mainly in laboratory with some field service. Thorough knowledge of textile processes required. State age, education and qualification. Box 326, SCIENCE.

Microbiologist: Assistant Professor. Recent graduate preferred. Should be interested in parasitology. Midwestern medical school. Appoint. February, 1950. Box 324, SCIENCE.
The Market Place

CHARGES and REQUIREMENTS for "MARKET PLACE" Ads
1. Rate: 20¢ per word for classified ads, minimum charge $5.00 for each insertion. Such ads are set in uniform style, without display; the first word only, in bold face type.
For display ads, using type larger of different style than the uniform classified setting, and entirely enclosed with separate rules, rates are as follows:
- Single insertion $16.00 per inch
- 7 times in 1 inch 14.50 per inch
- 13 times in 1 year 13.00 per inch
- 26 times in 1 year 11.50 per inch
- 52 times in 1 year 10.00 per inch

2. Payment: For all classified ads, payment in advance is required, before insertion can be made. Such advance remittances should be made payable to SCIENCE, and forwarded with advertising "copy" instructions.
For display advertisers, monthly invoices will be sent on a charge account basis—providing satisfactory credit is established.

3. Closing Date: Classified advertisements must be received by SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days before date of publication (Friday of every week).
For proof service on display ads complete "copy" instructions must reach the publication offices of SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D. C., not later than 4 weeks preceding date of publication.

With the scope and intensity of nuclear research increasing almost daily, the importance of reliable survey instruments becomes more apparent than ever before. Only by the use of modern equipment, used regularly in every laboratory, can the health hazard be kept at a minimum.

NUCLEAR'S new Model 2610A incorporates the most modern design throughout to make it completely up-to-date. Operated by the proven basic circuit used in the previous Model 2610, it now embodies lighter weight and watertight construction. The smaller, lighter probe snaps into the handle for ease in carrying, and all switches are arranged so they may be operated by the same hand that is carrying the weight of the instrument. Both earphones and an easy-to-read meter are provided, and metal loops permit the use of a shoulder strap if desired. Each instrument is supplied with a calibration standard.

Other NUCLEAR monitoring Instruments include Model 2111 Portable Alpha Survey Meter, Model 3340 Pocket Chambers, Model 2050 Charger-Reader, and Model 2300 light weight audio-monitoring survey instrument.

When you order radioactivity monitoring equipment, specify NUCLEAR.

SEND FOR THIS NEW, COMPLETE CATALOG!

Complete information on all instruments, including applications, specifications, features, dimensions, etc. Also details on NUCLEAR'S special services and products. No organization engaged in nucleonics should be without this complete catalog.
