Supporting Information

(Figures S1-S14; Total Pages: 16)
Table of contents:

1. Plot of the RMSD of the protein backbone of $\text{Met93}S-\text{NH}_{\text{Hyl211}}^+$ system; (Page 2).
2. MM minimized structures of sulfilimine crosslinks in the $\text{Met93}S-\text{N}_{\text{Lys211}}$ systems; (Page 3).
3. MM minimized structures of sulfilimine crosslinks in the $\text{Met93}S-\text{NH}_{\text{Lys211}}^+$ systems; (Page 4).
4. MM minimized structures of sulfilimine crosslinks in the $\text{Met93}S-\text{N}_{\text{Hyl211}}$ systems; (Page 5).
5. MM minimized structures of sulfilimine crosslinks in the $\text{Met93}S-\text{NH}_{\text{Hyl211}}^+$ systems; (Page 6).
6. Hydrogen bonding in the $\text{Met93}S-\text{N}_{\text{Lys211}}$ system between Met93, Lys211, and other residues; (Page 7).
7. Hydrogen bonding in the $\text{Met93}S-\text{NH}_{\text{Lys211}}^+$ system between Met93, Lys211+, and other residues; (Page 8).
8. Hydrogen bonding in the $\text{Met93}S-\text{N}_{\text{Hyl211}}$ system between Met93, Hyl211, and other residues; (Page 9).
9. Hydrogen bonding in the $\text{Met93}S-\text{NH}_{\text{Hyl211}}^+$ system between Met93, Hyl211+, and other residues; (Page 10).
10. Plots of the Radial Distribution Function's (RDF) for water molecules up to 10 Å from the sulfilimine crosslinked residues; (Page 11)
11. Visualization of the water distribution around the $\text{Met93}S-\text{N}_{\text{Lys211}}$ crosslink; (Page 12).
12. Visualization of the water distribution around the $\text{Met93}S-\text{NH}_{\text{Lys211}}^+$ crosslink; (Page 13).
13. Visualization of the water distribution around the $\text{Met93}S-\text{N}_{\text{Hyl211}}$ crosslink; (Page 14).
14. Visualization of the water distribution around the $\text{Met93}S-\text{NH}_{\text{Hyl211}}^+$ crosslink; (Page 15).
15. Uploaded separately: topology and coordinate files (Top-and-coordinates-1 and -2) for all four systems.
Figure S1. Plot of the RMSD of the protein backbone of Met$_{93}$S-NH$_{\text{Hly1211}^+}$ system from 10 ns to 190 ns production of total 190 ns MD simulations.
Figure S2. The MM minimized structures of the sulfilimine crosslink in the Met93S–N\textsubscript{Lys211} system and snapshots were taken every 10 ns (0 to 100 ns) from the corresponding MD simulation. Note, the 0 ns snapshot is the equilibrated structure and for clarity, waters are not shown.
Figure S3. The MM minimized structures of the sulfilimine crosslink in the $\text{Met}_{93}\text{S}--\text{NH}_{\text{Lys211}}^+$ system and snapshots are taken every 10 ns (0 to 100 ns) from the MD simulation. Note, the 0 ns snapshot is the equilibrated structure and for clarity, waters are not shown.
**Figure S4.** The MM minimized structures of the sulfilimine crosslink in the \( \text{Met}93\text{S–N}_{\text{Hyl}211} \) system, and snapshots are taken every 10 ns (0 to 100 ns) from the corresponding MD simulation. Note, the 0 ns snapshot is the equilibrated structure and for clarity, waters are not shown.
**Figure S5.** The MM minimized structures of the sulfilimine crosslink in the protonated Met95S–NH<sub>Hyl211</sub><sup>+</sup> system, and snapshots are taken every 10 ns (0 to 100 ns) from the corresponding MD simulation. Note, the 0 ns snapshot is the equilibrated structure and for clarity, waters are not shown.
Figure S6. Illustration of the hydrogen bonding in the Met93-S-N_Lys211 system between Met93, Lys211, and other residues in the MM minimized, equilibrated (0 ns), and every 10 ns during the 100 ns production MD simulation. Hydrogen bonds are indicated by a blue dotted line.
Figure S7. Illustration of the hydrogen bonding in the Met93-S-NH$_2$LY211$^+$ system between Met93, Lys211, and other residues in the MM minimized, equilibrated (0 ns), and every 10 ns during the 100 ns production MD simulation. Hydrogen bonds are indicated by a blue dotted line.
Figure S8. Illustration of the hydrogen bonding in the Met93-S-NHy211 system between Met93, Hy211, and other residues in the MM minimized, equilibrated (0 ns), and every 10 ns during the 100 ns production MD simulation. Hydrogen bonds are indicated by a blue dotted line.
Figure S9. Illustration of the hydrogen bonding in the $\text{Met93S-NH}_{\text{Hyl211}^+}$ system between Met93, Hyl211, and other residues in the MM minimized, equilibrated (0 ns), and every 10 ns during the 100 ns production MD simulation. Hydrogen bonds are indicated by a blue dotted line.
Figure S10. Plots of the Radial Distribution Function’s (RDF) for water molecules up to 10 Å from the sulfilimine crosslinked residues in the (A) Met$_{93}$S-N$_{Lys211}$, (B) Met$_{93}$S-NH$_{Lys211}^+$, (C) Met$_{93}$S-N$_{Hyl211}$, and (D) Met$_{93}$S-NH$_{Hyl211}^+$ systems as observed from 10 ns to 100 ns of total 100 ns MD simulations.
**Figure S11.** Visualization of the water distribution around the Met93-S-N_Lys211 crosslink as observed in the MM minimized and equilibrated (0 ns) structures, and then at every 10 ns of the 100 ns production MD simulations.
Figure S12. Visualization of the water distribution around the Met93-S-NH_Lys211+ crosslink as observed in the MM minimized and equilibrated (0 ns) structures, and then at every 10 ns of the 100 ns production MD simulations.
Figure S13. Visualization of the water distribution around the $\text{Met}93\text{S}-\text{N}\text{Hyl}121$ crosslink as observed in the MM minimized and equilibrated (0 ns) structures, and then at every 10 ns of the 100 ns production MD simulations.
**Figure S14.** Visualization of the water distribution around the $\text{Met93-S-NH}_{\text{Hy1211}}^+$ crosslink as observed in the MM minimized and equilibrated (0 ns) structures, and then at every 10 ns of the 100 ns production MD simulations.
