There are three errors in the “Predictor” column of Table 7. For the last APSP, CPSP, and GSR “Outcome” rows, the correct predictor should be SFQ-1, not SGQ-1. Please view the corrected table below.
### Table 7. Predictive validity of the SFQ, SFQ-s and SFQ-l.

| Outcome | Predictor | Study 1 | Study 4 |
|---------|-----------|---------|---------|
|         | OR (95 CI) | OR (95 CI) |
| APSP    | SFQ       | 2.73 (1.59–4.69)** | 2.35 (1.81–3.04)*** |

Bivariate logistic regression with median split SFQ, SFQ short term and SFQ long term as predictor. APSP: acute postsurgical pain on day 4. CPSP: chronic postsurgical pain after 6 months in Study 1, after one year in Study 4. Pain scores were dichotomized using a cut off value of 40 for the VAS/NRS. GSR: global surgical recovery on a scale of 0–100%, values of 80–100% were considered as good recovery; long term GSR after 6 months in Study 1, after one year in Study 4.

To adjust for multiple testing a Bonferroni correction was applied: a p-value <0.017 was considered statistically significant.

**p <0.01,
***p <0.001.
