Figure 1. Individual median platinum concentration of women with silicone breast implants and breast implant illness (group A), women with silicone breast implants and no breast implant illness (Group B) and control (Group C). Bar represents median. Error bars indicate interquartile range. *p* values indicate Kruskal-Wallis H and Mann-Whitney testing with levels of significance.

Figure 2. Individual median platinum concentration of women with current and previous ruptures in Group A. Group A: women with silicone breast implants and breast implant illness.
