ABSTRACT

Family communication that is established is very important in the child's personality. Therefore, the pattern of communication and interaction carried out by a family is very important. The formulation of the problem in this study is how a family communication can shape the child’s personality. The purpose of this study is to read and analyze and find answers to problems in family communication in shaping the child's personality. This study uses family communication factor variables that have four dimensions, namely the source of communication, the message, the media, and the recipient. The approach in this study is a quantitative approach with descriptive research type with a sample of 34 people who are elementary school students. The data collection method used in this study is by distributing questionnaires to respondents, the results of which will be carried out by conducting a univariate analysis using a frequency distribution table. The results showed that there was something lacking in the family communication factor carried out by the families of elementary school students. This can be seen in the lowest value, namely messages with scientific indicators, while the communication that occurs face-to-face to his family is maximal. so that it can be concluded that in the factors of family communication there are those that have been established with the maximum and less than the maximum and this will affect in shaping the child's personality.

Keywords: Family Communication, Personality, Children

INTRODUCTION

Family is the most important primary group in society. Historically, families were formed at least from units that were limited organizations and had a minimum size, especially for the parties who initially entered into a bond (Triwardhani, 2020). A family is a small group that is very important in influencing the mindset and behavior of a child. In the family, children will be educated, cared for, and their social constructions are built. Communication is a tool to build a mindset (Satya et al., 2015). The patterns of communication and interaction that are carried out in the family have a big influence on the development and formation of personality in children. Parents’ patterns in dealing with and solving problems are passed down to children through modeling (Satya et al., 2015).
For example, children who have anxious parents tend to have similar traits to their parents. They will also tend to get anxious and tense easily in dealing with various things. Likewise, children who grow up with aggressive parents tend to show aggressive attitudes in their interactions (Sumakul, 2015). Because this has a direct effect on their personality, a child's thinking about the importance of meaning of education, school, and how he interprets this meaning is strongly influenced by the family. Therefore, communication that occurs in the family must be considered, from how to communicate it, the frequency of communication, and what is communicated will affect the child's personality. Education is a conscious and planned effort to create an atmosphere of learning and the learning process so that students actively develop their potential to have religious-spiritual strength, self-control, personality, intelligence, noble character, and skills needed by themselves, society, nation, and state (Triwardhani, 2020). This communication plays an important role in conveying a message and what the message conveyed will be for the child to interpret. From an educational perspective, the family is the first educational environment for children.

Each child's personality is different. A person's personality comes from the formations received from the environment. A child's personality is caused by genetic (hereditary) and environmental factors such as family, friends, and neighbors. A child's personality is formed from an environment that can influence it, for example, some children are timid, angry, sociable, friendly, aloof, arrogant, and others (Nazarudin, 2018). Therefore, parents need to know the right approaches to understand and understand children's problems. If not then this will cause a lot of misunderstanding between them.

The family plays its role as a social system that can shape the character and morals of a child. Family is not only a place where the father, mother, and children gather. A family is more than that. Family is the most comfortable place like a child. Everything starts from a family. The ability to socialize, self-actualize, argue, to deviant behavior. Family is the umbrella of life for a child. Family is the most comfortable place for a child (Sari, A., Hubeis, A. V. S., Mangkuprawira, S., & Saleh, 2010).

Moral cultivation in a child begins with the family environment. The influence of the family in the forging of children's character is enormous. In a family, a child is cared for, taught various things. Provided with education about character and culture. Every parent who has children certainly wants their children to grow and develop into intelligent humans who have a good character so that they can maintain the good name of the family. Children are not adults, they have special characteristics. A child sees, hears, feels, and thinks with a distinctive form, but does not come out of logic and healthy feelings. For example, the children see, hear, and feel as parents see, hear, feel and think. Therefore, parents should interact with children based on the assumption that they are children (Arsam, 2012).

Communication is very basic in human life. And even communication has become a phenomenon for the formation of a society or community that is integrated by information, where each individual in the community itself shares information (information sharing) to achieve common goals (Sukaimi, 2013). Communication is also understood as a form of interaction communication, which is communication with a cause-effect or action-reaction process that has alternating directions. In this context, communication involves communicators who deliver messages, both verbal and non-verbal to the communicants who immediately respond in the form of verbal and non-verbal actively, dynamically, and reciprocally. That way, the interaction between parents and children will determine the basis of the provision of a child. For the child's growth and development process to be guaranteed and take place optimally, the family must fulfill the child's basic needs, namely attention, and affection (Laras & Sunarya, 2020).

The attention and affection given to the child are included in the communication. Family communication is communication that occurs between family members in verbal and non-
verbal forms. Communication in a family has 2 principles, effective communication, and ineffective communication. The effectiveness of family communication is meant by sending messages that are relatively clear so that they have an understanding of the same meaning of the message (Satya et al., 2015).

Every action taken parents will have an influence on the formation of their children's character both in family and social environment in the future. Parents who really pay special attention to their children will form a personality that is positive about his son. On the other hand, parents who don't care or are very restraint, will form a negative personality towards the child (Habibah, S. U., Fathani, A. H., & Nursit, 2021).

In a previous study, which was reviewed by Ardiati (2018), it was found that parents play a very important role in the child's personality. Every action taken by parents will have an influence on the formation of their children's character both in the family environment and socially in the future. Parents who really pay special attention to their children will form a positive personality towards their children. Conversely, parents who do not care or are very restrained, will form a negative personality towards the child. This article describes the importance of the role of parents in the personal development of early childhood (Lindayani, 2019).

In addition, the research conducted by Siswanta (2017) which describes the values developed in the development of children's personality characters, describes the implementation of children's personality character development, strategies for developing children's personality characters, obstacles in the implementation of children's personality development in Islamic PAUD Integrated District of Magelang in 2015. Meanwhile, according to Chairilsyah (2012) personality development is basically individual, but in fact personality can actually be transmitted or affect other people.

A person's personality is not an important factor in determining the attitude or behavior to be taken, because it is strongly influenced by many (Diyantini & Lismawati, 2015). Without serious attention and full love from both parents, especially, then of course in turn it will be difficult for the growth and development of a healthy and normal child's mental and mental health, which in the end is very influential. to the child's personality (Jamaluddin et al., 2019).

In a study conducted by Framanta (2020), it was stated that the personality of a child, for good or bad, personally and the child's soul, really depends on the family or both parents. Personality is a trait that is used as a distinctive characteristic of the behavior of others who are in, the way of speaking, the way of thinking. The research has similarities with the researcher, namely seeing the family will participate in determining the child's personality, what is different in this study is the variable used and in this study, the researcher also wants to provide the results of this study so that it can be seen by a family in order to improve their family communication. so that the child becomes a good personality.

According to Fitriani (2011), there are three factors that determine the development of a child's personality: innate factors, early experiences in the family, and later experiences. This pattern is closely related to physical and mental characteristics. These traits form the basis for the structure of personality patterns that are built through learning experiences. There is a difference between Fitriani's research and researchers, namely in this study, researchers used factors such as source of communication, the message, the media, and the recipient.

Based on the background and literature review above, the problem can be formulated as follows: how is the role of family communication in shaping the child's personality. As well as from the formulation of the problem, the purpose of writing is to analyze and find answers to problems in family communication in shaping the child's personality.

METHODS

The research method used in this research is a quantitative method with a descriptive approach (Putri et al., 2020). Descriptive is defined as research that intends to describe the data by analyzing the data obtained to get a clear picture of the method that emphasizes the objective measurement aspects of social phenomena, quantitative research is processed and analyzed with statistics (Morissan, 2014).

The type of research method used in this research is survey research, according to Morissan (2013) the survey method is a research method using a structured questionnaire given to a specific population sample of respondents. In the survey method, the process of collecting and analyzing social data is very structured and detailed through a questionnaire as the first instrument to obtain information from several respondents who are assumed to represent a specific population, where the data will be taken from a predetermined sample. Questionnaires were given to respondents who had met the criteria determined by the researcher using the google form.

Then the data is studied and conclusions are drawn from the relationships between the relevant variables in the research process carried out. The population in this study were elementary school students with a sample of 7-13 years old. The sampling technique in this study was simple random sampling. Simple random sampling technique is one type of probability sampling (Mulyana, 2009). Therefore, the number of samples in this study was determined using the Slovin formula to obtain 34 samples.

In this study, the authors will research on April 5 - 8, 2021. This research was conducted by distributing questionnaires to respondents who had already determined the criteria. The author also only researches during that time and will not research at other times to compare. The descriptive method aims to describe situations and events. The descriptive method is looking for or examining the relationship between variables. Descriptive research studies problems in society and certain situations including relationships, activities, attitudes, views and ongoing processes, and the influence of a phenomenon. The purpose of descriptive research is to create descriptions, descriptions, or paintings in a systematic, factual, and accurate manner as well as the facts, characteristics, and relationships between the phenomena being investigated (Morissan, 2014).

Data analysis techniques used to analyze data such as explaining or describing data that have been combined in a makeshift manner without making general conclusions and in describing the data, this study uses a frequency distribution.

RESULTS AND DISCUSSION

We researched family communication patterns in shaping children's personalities to identify and analyze and find answers to problems in family communication on children's personalities. The following is a table of the results of each statement:

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 12        | 35.3%      |      |
| 3 = (agree)          | 21        | 61.8%      | 3.32 |
| 2 = (disagree)       | 1         | 2.9%       |      |
| 1 = (totally disagree)| 0        | 0%         |      |
| Total                | 34        | 100.0%     |      |

Based on the table above, the average respondent answered agree that the father likes to ask questions about behavior.

http://dx.doi.org/10.32585/jkp.v6i1.1642 | 4
Table 2. The mother told about her experiences as a child

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 12        | 35,3%      |      |
| 3 = (agree)          | 15        | 44,1%      | 3,08 |
| 2 = (disagree)       | 5         | 14,7%      |      |
| 1 = (totally disagree)| 2        | 5,9%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the mother told her about her experience.

Table 3. Fathers help children when doing assignments

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 10        | 29,4%      | 3,02 |
| 3 = (agree)          | 16        | 47,1%      |      |
| 2 = (disagree)       | 7         | 20,6%      |      |
| 1 = (totally disagree)| 1        | 2,9%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the father helps the child while doing the task.

Table 4. Mothers teach children about attitudes and behavior

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 10        | 29,4%      | 3    |
| 3 = (agree)          | 18        | 52,9%      |      |
| 2 = (disagree)       | 5         | 14,7%      |      |
| 1 = (totally disagree)| 1        | 2,9%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the mother teaches attitudes and behavior.

Table 5. Fathers give gifts when children excel

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 9         | 26,5%      | 2,82 |
| 3 = (agree)          | 14        | 41,2%      |      |
| 2 = (disagree)       | 7         | 20,6%      |      |
| 1 = (totally disagree)| 4        | 11,8%      |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the father gives a gift when the child achieves.
Table 6. Mother praises when the child gets good grades  
\( N = 34 \)

| Statement          | Frequency | Percentage | Mean |
|--------------------|-----------|------------|------|
| 4 = (strongly agree) | 17        | 50,0%      |      |
| 3 = (agree)        | 12        | 35,3%      | 3,35 |
| 2 = (disagree)     | 5         | 14,7%      |      |
| 1 = (totally disagree) | 0     | 0%        |      |
| Total              | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered strongly agree that the mother praised when the child got good grades.

Table 7. Father explains to children the importance of school  
\( N = 34 \)

| Statement          | Frequency | Percentage | Mean |
|--------------------|-----------|------------|------|
| 4 = (strongly agree) | 17        | 50,0%      |      |
| 3 = (agree)        | 14        | 41,2%      | 3,38 |
| 2 = (disagree)     | 2         | 5,9%       |      |
| 1 = (totally disagree) | 1   | 2,9%      |      |
| Total              | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered strongly agree that the father explained the importance of school.

Table 8. Mother tells about the news of a successful child  
\( N = 34 \)

| Statement          | Frequency | Percentage | Mean |
|--------------------|-----------|------------|------|
| 4 = (strongly agree) | 11        | 32,4%      |      |
| 3 = (agree)        | 19        | 55,9%      | 3,14 |
| 2 = (disagree)     | 4         | 11,8%      |      |
| 1 = (totally disagree) | 0   | 0,0%      |      |
| Total              | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the mother told the news about a successful child.

Table 9. Father taught the importance of being polite  
\( N = 34 \)

| Statement          | Frequency | Percentage | Mean |
|--------------------|-----------|------------|------|
| 4 = (strongly agree) | 14        | 41,2%      |      |
| 3 = (agree)        | 16        | 47,1%      | 3,3  |
| 2 = (disagree)     | 4         | 11,8%      |      |
| 1 = (totally disagree) | 0   | 0,0%      |      |
| Total              | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the father taught the importance of being polite at school.
Factors of Family Communication in Forming Children’s Personality

**Table 10. The mother is angry when the child clashes with a friend**

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 8         | 23,5%      | 2,88 |
| 3 = (agree)          | 18        | 52,9%      |      |
| 2 = (disagree)       | 7         | 20,6%      |      |
| 1 = (totally disagree) | 1       | 2,9%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the mother is angry when the child disagrees with her friend.

**Table 11. Father spoke face to face**

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 16        | 47,1%      | 3,44 |
| 3 = (agree)          | 15        | 44,1%      |      |
| 2 = (disagree)       | 4         | 11,8%      |      |
| 1 = (totally disagree) | 0       | 0,0%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered strongly agree that the father spoke face-to-face.

**Table 12. The mother explained good behavior face to face**

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 14        | 41,2%      | 3,23 |
| 3 = (agree)          | 18        | 52,9%      |      |
| 2 = (disagree)       | 1         | 2,9%       |      |
| 1 = (totally disagree) | 1       | 2,9%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the mother explained that they behave well face to face.

**Table 13. The child understands the message the father conveyed**

| Statement            | Frequency | Percentage | Mean |
|----------------------|-----------|------------|------|
| 4 = (strongly agree) | 9         | 26,5%      | 3,2  |
| 3 = (agree)          | 23        | 67,6%      |      |
| 2 = (disagree)       | 2         | 5,9%       |      |
| 1 = (totally disagree) | 0       | 0,0%       |      |
| Total                | 34        | 100,0%     |      |

Based on the table above, the mean respondents answered agree that the child understood the message that was conveyed by the father.
Table 14. The child listens to messages from the mother  
$N = 34$

| Statement              | Frequency | Percentage | Mean |
|------------------------|-----------|------------|------|
| 4 = (strongly agree)   | 14        | 41.2%      | 3.32 |
| 3 = (agree)            | 17        | 50%        |      |
| 2 = (disagree)         | 3         | 8.8%       |      |
| 1 = (totally disagree) | 0         | 0.0%       |      |
| Total                  | 34        | 100.0%     |      |

Based on the table above, the mean respondents answered agree that the child listens to messages from the mother.

Table 15. Children are enthusiastic about learning  
$N = 34$

| Statement              | Frequency | Percentage | Mean |
|------------------------|-----------|------------|------|
| 4 = (strongly agree)   | 10        | 29.4%      | 3.02 |
| 3 = (agree)            | 18        | 52.9%      |      |
| 2 = (disagree)         | 6         | 17.6%      |      |
| 1 = (totally disagree) | 0         | 0.0%       |      |
| Total                  | 34        | 100.0%     |      |

Based on the table above, the mean respondents answered agree that the child is enthusiastic about learning.

Table 16. Children apologize when they make mistakes  
$N = 34$

| Statement              | Frequency | Percentage | Mean |
|------------------------|-----------|------------|------|
| 4 = (strongly agree)   | 16        | 47.1%      | 3.32 |
| 3 = (agree)            | 13        | 38.2%      |      |
| 2 = (disagree)         | 5         | 14.7%      |      |
| 1 = (totally disagree) | 0         | 0.0%       |      |
| Total                  | 34        | 100.0%     |      |

Based on the table above, the mean respondents answered strongly agree that children apologize when they make mistakes.

The following is a table of mean per dimension:

Table 17. Mean per dimension

| No. | Dimensions          | Mean |
|-----|---------------------|------|
| 1   | Source of Communication | 3.2  |
| 2   | Message             | 3.1  |
| 3   | Media               | 3.3  |
| 4   | Receiver            | 3.17 |

Based on the mean per dimension table above, it can be seen that the highest mean value is in the third dimension, namely media, and the lowest dimension is in the second dimension, namely messages.

The media dimension is the highest. According to the mean of the respondent’s answer, the communication that occurs face-to-face to their family is maximal. Meanwhile, the message dimension gets the lowest mean value. The mean of respondents’ answers tends to show that the communication that occurs does not contain an educational element.
The following is a table per indicator:

| No | Indikator                  | Mean |
|----|---------------------------|------|
| 1  | Sender of information     | 3.2  |
| 2  | Science                   | 3.01 |
| 3  | Entertainment             | 3.08 |
| 4  | Information               | 3.26 |

| 8  | Message effect            | 3.32 |

Based on the table above, it can be seen that the highest mean on the five sensory indicators, and the lowest mean per indicator is in the science indicators. The table above is the result of 16 Statements, 8 indicators, 4 dimensions, and 34 respondents.

Based on the mean per-indicator diagram, it can be seen that the highest mean is in the indicator using the five senses which is the highest indicator, this shows that the respondent’s family is maximal in conveying information using the five senses. While the lowest mean is at the lowest indicator of science, this shows that the respondent’s family has not maximally conveyed science information.

CONCLUSION

Communication is an important thing in life, it is impossible not to communicate either intentionally or unintentionally. So communication that occurs in a family is not the same as communication in another family. Every family has its communication pattern. Communication within the family is very important because there is openness between parents and children.

This research consists of 4 dimensions, namely the source of communication, message, media, and recipient. The dimension with the highest score is owned by the media, with mean respondents strongly agree. This shows that the communication that occurs face-to-face with their family is maximal. This dimension has one indicator, namely the five senses. The first indicator, the five senses face to face. On this indicator, the mean respondents answered strongly agree because their families have maximally communicated through the media face-to-face. The lowest mean is in the science indicator, this shows that the respondent's family has not maximally conveyed science information.
