Porto GBF, Chen CJ, Al Kasab S, et al. Association of noncontrast computed tomography and perfusion modalities with outcomes in patients undergoing late-window stroke thrombectomy. *JAMA Netw Open*. 2022;5(11):e2241291. doi:10.1001/jamanetworkopen.2022.41291

**eTable.** Missing Data for Each Respective Variable at the Time of Data Analysis

This supplemental material has been provided by the authors to give readers additional information about their work.
eTable. Missing Data for Each Respective Variable at the Time of Data Analysis

| Characteristics               | Number of missing data (Total 733) |
|-------------------------------|------------------------------------|
| Race ethnicity                | 43                                 |
| Congestive heart failure      | 93                                 |
| Smoking history               | 50                                 |
| Admission NIHSS               | 1                                  |
| ASPECTS                       | 88                                 |
| IV thrombolytics              | 3                                  |
| Final TICI                    | 8                                  |
| Complications                 | 3                                  |
| Distal embolization           | 65                                 |
| Symptomatic ICH               | 30                                 |
| Craniectomy                   | 278                                |
| NIHSS at 24 hours             | 125                                |
| NIHSS at discharge            | 168                                |
| mRS at discharge              | 63                                 |
| Length of stay                | 263                                |
| NIHSS at 90 days              | 540                                |
| mRS at 90 days                | 229                                |
