Table S1. Cause of death and ventricular arrhythmic events according to hospitalization and after-discharge period.

| Variable                              | in-hospital | ~3 months | 3~12 months | 12~ months |
|---------------------------------------|-------------|-----------|-------------|------------|
| Death                                 | 12          | 8         | 4           | 19         |
| Cause of death                        |             |           |             |            |
| Cardiovascular cause                  |             |           |             |            |
| Sudden cardiac death                  | 0           | 5         | 2           | 4          |
| Heart failure                         | 5           | 0         | 0           | 4          |
| Aortic dissection                     | 1           | 0         | 0           | 1          |
| Noncardiac cause                      |             |           |             |            |
| Intracranial bleeding                 | 0           | 1         | 0           | 0          |
| Infection                             | 2           | 0         | 0           | 4          |
| Respiratory failure                   | 2           | 0         | 0           | 0          |
| Malignancy                            | 1           | 2         | 1           | 2          |
| Other noncardiac cause                | 1           | 0         | 1           | 1          |
| Unknown/undetermined cause            | 0           | 0         | 0           | 3          |
| Sustained VT/VF                       | 3           | 0         | 1           | 0          |
| Appropriate ICD therapy               | 0           | 1         | 2           | 0          |

ICD, implantable cardioverter defibrillator; VT, ventricular tachycardia; VF, ventricular fibrillation.
