S1. Appendix B: A selection of studies not included in the qualitative synthesis

The literature on NMP is huge and there is a very large number of studies worth reading that we did not include in the qualitative synthesis due to our research questions and inclusion criteria. In the following list there is a selection of some of them that we find particularly interesting because of the perspective followed: focus on qualitative research, clinical view and therapeutical approach, and theoretical discussion of nomophobia from a novel point of view.

| Reference of the study | Year | Journal of publication | Country |
|------------------------|------|------------------------|---------|
