Supplementary Table 1.

|                         | Reference range | Reference range |
|-------------------------|-----------------|-----------------|
|                         |                 |                 |
| **Factor V activity**   |                 |                 |
| Patient                 | 92 %            | 70-135          |
| Healthy                 | 77 %            | 70-135          |
| 1:1 mixture             | 85 %            | vWF antigen     |
| **Factor VIII activity**|                 |                 |
| Patient                 | 173 %           | 60-150          |
| Healthy                 | 51 %            | PIC             |
| 1:1 mixture             | 121 %           | Total PAI-1     |
| **Factor XIII/13 activity**|              |                 |
| Patient                 | 6 %             | 70-140          |
| Healthy                 | 76 %            | Thrombomodulin  |
| 1:1 mixture             | 6 %             | Antiplasmin     |
| **vWF activity**        |                 |                 |
| Patient                 | 242 %           | 60-170          |
| Healthy                 | 68 %            | D-dimer         |
| 1:1 mixture             | 196 %           | vWF multimer analysis |

Abbreviation vWF: von Willebrand factor, PIC: plasmin-alpha2-plasmininhibitor-complex, PAI-1: plasminogen activator inhibitor-1, FDP: fibrin-fibrinogen degradation products, LAC: Lupus anticoagulant, dRVVT: dilute Russell’s viper venom time
