Visualizing Bring-backs

Omar Lizardo¹, Dustin S. Stoltz², Marshall A. Taylor², and Michael Lee Wood²

Abstract

The figure plots the number of articles that have attempted to “bring” something “back in” in the social sciences by publication year and number of citations. Andrew Abbott, taking a (pessimistic) sociology of knowledge perspective, identified this tendency—beginning with Homans’s classic article “Bringing Men Back in”—as emblematic of the tendency to rediscover old ideas in sociology. The plot shows that “bring-backs” did not become a common yearly occurrence until the mid to late 1990s but are now relatively frequent. The most successful bring-backs have been relatively abstract things such as the “state” and “society” and more recently, “culture,” “knowledge,” and “values.”

Keywords

visualization, sociology of knowledge, men

The publication of Homans (1964) brought an interesting thing into sociology: the repeated attempt of people to bring something believed to be ignored “back in.” Abbott (2001), taking a (pessimistic) stance, identified this as emblematic of the tendency to rediscover old ideas in sociology, noting that about 91 things had been brought back at the time of his writing. We set out to update and expand the quest for things brought back. To generate the population of bring-backs, we used the keywords: intitle: “bringing” intitle: “back in” in Google Scholar, capturing all entries having the words bringing and back in in the title. After cleaning, removing duplicates, and consolidating different versions of the same publication, we ended up with 1,303 entries published since 1964.¹

Figure 1 summarizes the main patterns, plotting year of publication in the horizontal axis against the total number of citations in the vertical axis. The upper histogram shows the number of articles bringing something back every year. The right-side histogram shows the univariate distribution of citations among bring-backs (predictably skewed). Two sets of points are labeled in the main plot. On the top half of the plot, we label all points that fall above the 95th percentile of total citations among articles cited at least once published between 1964 and 2005 (successful bring-backs). Toward the bottom left, we label all papers published before 1985, allowing us to see the range of “early adopters,” both successful (upper left) and less successful (lower left). We used automated text analysis to code entities being brought back on a gradient of abstract to concrete (Bhatia and Walasek 2016). Orange labels fall toward the abstract side, and purple labels are toward the concrete side (see Supplementary Material for details).

Two patterns are evident in the figure.

First, the uptake of bring-backs took quite a long time. Two decades after Homans (e.g., 1984), only a relatively small number of papers tried to bring something back. After 1985, we see a small uptick and another one after the early 1990s. These more or less correspond to the publication of the highly successful bring-backs of Evans, Rueschemeyer, and Skocpol (1985) and Friedland and Alford (1991), who brought the state and society back in (to historical sociology and institutional analysis, respectively). After the mid-1990s, we see a gradual climb in the number of bring-backs; by the mid-aughts, bring-backs become a regular part of the scholarly landscape, peaking in 2008. Second, bring-back successes are tilted toward the abstract side of the ledger. While

there have been some successful concrete bring-backs, such as bodies, strong ties, teachers, and even a repeat bring-back of “(the) men” by a feminist sociologist (Reskin 1988), they are relatively underrepresented among the successful cases (and relatively overrepresented among early failures). In addition to the state and society, recent abstract bring-backs successes include knowledge, culture, values, context, power, politics, and history. Even the top “repeat bring-backs” (things that have been brought back in by more than 20 papers) are dominated by abstract things, with “people” being the only exception (see top-right inset).

An irony presents itself. While Homans wanted to bring (concrete) “men” [sic] back in, the things that have been most successfully brought back after his call are closer to the macro-abstractions he railed against.

**Author Biographies**

**Omar Lizardo** is the LeRoy Neiman Term Chair Professor in the Department of Sociology at the University of California, Los Angeles. His areas of research interest include the sociology of culture, social networks, the sociology of emotion, social stratification, cognitive social science, and organization theory. He is currently a member of the editorial advisory board of *Social Forces, Theory and Society, Poetics, Sociological Forum, Journal for the Theory of Social Behaviour*, and *Journal of World Systems Research*, and with Rory McVeigh and Sarah Mustillo, he is one of the current co-editors of *American Sociological Review*.

**Dustin S. Stoltz** is a PhD candidate in the Department of Sociology at the University of Notre Dame and a doctoral affiliate with the Kellogg Institute for International Studies. His primary field of inquiry is economic sociology, followed closely by cultural sociology, network analysis, organizational studies, and cognitive social science. His dissertation research advances a sociology of elite advising through an empirical exploration of consulting practices around the globe, elucidating how economic discourse and reasoning are shaped by cultural cognitive mechanisms and the regularities of the human imagination. His current and forthcoming work appears in *Sociological Theory, Poetics, The American Sociologist*, and *The European Journal of Social Theory*.

**Marshall A. Taylor** is a PhD candidate in the Department of Sociology at the University of Notre Dame. His research rests at the intersection of culture and cognition, computational social science, and social movements. His dissertation examines the cultural and social-psychological conditions under which white nationalist organizations in the US South distributed their attention across grievances and to other members of their social movement field between 1980 and 2008. His work can be found in outlets including *Sociological Theory, Poetics, Socius, Journal of Classical Sociology, Deviant Behavior*, and the *Stata Journal*.

**Michael Lee Wood** is a PhD candidate in the Department of Sociology at the University of Notre Dame and an affiliate of the Center for the Study of Religion and Society. He studies topics relating to culture, cognition, and religion. His dissertation develops a dynamic theory of culture in reasoning and investigates variation in reasoning using a variety of computational and qualitative approaches. His work appears in *Sociological Theory*.
