Abstract—Dividend policy is one of the allocation funds from the company's earnings. In addition, dividend policy is one of the company's responsibility to investors. The purpose of this research is to find out the influence of managerial ownership, institutional ownership, cash flow, firm size, liquidity, IOS and leverage to dividend policy. Dividend policy is proxied using dividend payout ratio. This research also used profitability as intervening variable. The object of research is using main sector of IDX that is agriculture sector and mining sector. The period of this research is in 2010-2015. The research data used is obtained from company financial report from IDX and company website. The study used secondary data with quantitative approach. The analytical method used is path analysis. The results of this study indicate that liquidity and profitability have an influence on dividend policy. The profitability can be an intervening on institutional ownership of dividend policy. While managerial ownership, cash flow, firm size, IOS, and leverage insignificant effect on dividend policy. Profitability can not be an intervening variable on managerial ownership, cash flow, firm size, liquidity, investment opportunity set, and leverage to dividend policy. The results of this study can be taken into consideration for investors in determining the investment and the company can know the factors that must be considered in deciding dividend policy.

Keywords—dividend policy; profitability; path analysis; liquidity; institutional ownership
Penguji Black Swans Anomalies pada Bursa Efek Indonesia (BEI) untuk Indeks Saham LQ45 pada Tahun 2010-2011

Abstract—Pasar modal adalah tempat dimana trader melakukan investasi dengan menanamkan modalnya. Dalam pasar modal sekarang ini hampir setiap event tak terduga dapat muncul dan hal tersebut mempengaruhi dalam bursa saham dan dunia. Event tersebut mempengaruhi perekonomian dunia termasuk di Indonesia dan event tersebut disebut sebagai Black Swans Anomalies. Black Swans Anomalies mempunyai sifat bleed atau blowup. Arti dari bleed adalah ketika seseorang trader mengalami kerugian kecil dari waktu ke waktu tetapi ketika Black Swans Anomalies terjadi maka seseorang trader mendapatkan keuntungan luar biasa dan tidak ada batas banyak keuntungan akibat terjadinya Black Swans, sehingga Black Swans Anomalies dapat mengubah keadaan seseorang trader yang mempunyai saham loser akan menjadi saham winner. Dan blowup adalah ketika seseorang trader mengalami keuntungan kecil dari waktu ke waktu dengan mengambil risiko besar tetapi ketika Black Swans Anomalies terjadi maka seseorang trader akan kehilangan banyak bahkan sampai dana investasi awal dan Black Swans Anomalies akan berakhir jika investasi telah habis, sehingga Black Swans Anomalies dapat mengubah saham winner menjadi saham loser dan hal itu menyebabkan anomali winner-loser. Berdasarkan hasil pengolahan data dan pembahasan penelitian dapat disimpulkan bahwa Black Swans Anomalies terdapat di BEI untuk indeks LQ45 dan Black Swans Anomalies yang mempunyai sifat bleed dan blow up menyebabkan reaksi berlebihan/ Overreaction dari investor/praktisi saham sehingga fenomena price reversal dan anomali winner-loser terjadi dalam BEI untuk indeks LQ45.

Keywords—Black Swans Anomalies; bleed; blow up; overreaction; price reversal; anomali winner-loser
Financial Performance Evaluation with AHP and TOPSIS Methods on Mining Sector Companies That Listed in Indonesia Stock Exchange 2012-2015 Period

Abstract—One of methods that usually taken in evaluation of credit application is evaluate “quick ratio” that can be calculated based on financial report. But to avoid companies just show a good “quick ratio”, it is necessary to use Multi-Criteria Decision Making (MCDM) analysis to evaluate most of the financial ratios that will be used as covenant between creditor and debitor. The purpose of this research is to evaluate financial performance of public listed mining companies (Indonesia Stock Exchange) for 2012-2015 period using MCDM method, AHP and TOPSIS. The companies will be evaluated based on four groups of financial ratios: leverage ratios group (shows how hard the company has debts), liquidity ratios group (measuring how easily a company can obtain cash to settle short-term liabilities), efficiency ratios group (measure how productive the company uses its assets), and profitability ratios group (used to measure company capability to generate profit and also to give an overview of company effectiveness in their operation). As a result, 33 public listed mining companies was ranked in their performance order. Higher rank means higher priority and lower rank means lower priority to obtain credit facility. Beside of these 33 public listed companies, there are also other 10 public listed companies that strongly not recommended to obtain credit facilities because the financial ratios can’t be evaluated due to unable to publish financial report or no sales activity or no activity in mining sector anymore.

Keywords—MCDM; AHP; TOPSIS; financial; ratios;
The Study of Effect Islamicity Financial Performance Index to Remunerativeness of Sharia Commercial Banks in Indonesia

Dian Putri Mayasari

dianmayasari07@gmail.com

Abstract—The general objective of this research was to determine the increasing effect of Islamicity Performance Index towards remunerativeness of Sharia Commercial Banks in Indonesia. The objective of this research more specifically is to test the effect Islamicity Performance Index simultaneously towards remunerativeness of Islamic Banks in Indonesia, to test Profit Sharing Ratio, Zakat Performance Ratio, Equitable Distribution Ratio, Directors-Employee Welfare Ratio, and Islamic Income vs Non-Islamic Income Ratio Sharia Commercial Banks in Indonesia. The population used in this study was Sharia Commercial Banks in Indonesia during the year of 2011-2015, with a total sample of 7 banks. The sample was taken by using purposive sampling. The analyzing method used was descriptive analysis, classical assumption test, and multiple linear regression analysis to test the hypotheses using F test and significance t. F test results Islamicity Performance Index variables simultaneously affect remunerativeness (ROE) of Sharia Commercial Banks. Model regression using ROA isn’t fit in this research. Significance t test results shows that variable Zakat Performance Ratio, Directors-Employee Welfare, and Equitable Distribution Ratio are positive and significant to Return on Equity and no one variable that significant to Return on Assets. It can be concluded that Return on Assets inappropriate used to assess remunerativeness due to lack of effective use of turnover assets of Sharia Commercial Banks.

Keywords—Islamicity Performance Index; Profit Sharing Ratio; Zakat Performance Ratio; Equitable Distribution Ratio; Directors-Employee Welfare Ratio; Islamic Income vs Non-Islamic Income Ratio; Remunerativeness; Return on Asset; Return on Equity
