Keyword — Competence, teachers, elementary schools

I. INTRODUCTION

Education is essentially a process of nation building keseluruhan, where education is instrumental in developing aspects of life, especially in a period of reform that completely transs paras today. Education is essentially a role in educating the nation whose goal is to improve quality of Indonesian human.

National Education serves to develop the ability and character development and civilization dignified nation in the context of the intellectual life of the nation, is aimed at developing students’ potentials in order to become a man of faith and fear of God Almighty, noble, healthy, knowledgeable, skilled, creative, independent and become citizens of a democratic and responsible[1].

Guided by the quote above, it means the national education useful to develop skills and form attitudes that are very important in the life of society, education is not only very important for the individual, but also very important for the national life. In the national education goals explained that a democratic life depends on the participation of citizens are intelligent and responsible

It lies in the quality of education received by children and youths, one of education is elementary school (SD), SD is an institution that provided supplies to the students to be able to continue their education kejenjjang higher, when viewed subjects there in elementary school curriculum can be grouped into general education programs, educational program of academic and vocational education programs.

According to Sanjaya (2008) in [2] educational learning physical sports and student health in school is influenced by many factor, diantaranya; Teacher skills physical education and sports health, students, facilities and infrastructure and environmental factors. One of the subjects contained in the general education program is a physical education (physical education). Physical Education and Sport is essentially a process of education that utilizes physical activity (physical) exercise to produce a change in the quality of the individual, both in terms of physical, mental and emotional. Philosophically regarding physical education is the most important part of the overall education.

Teacher is a profession, which means a position that requires special skills as a teacher and can not be done by anyone outside the field of education.

A teacher must have a good performance in carrying out the duties and responsibilities that must be planning lessons by a teacher, which is a device preparation curriculum that will support teachers in teaching. As planned annual program, the semester program, syllabus, lesson plan, enrichment and remedial programs. This is a routine task that must be planned teachers in teaching, with careful planning would be more fruitful learning objectives to be achieved.

To achieve the learning objectives to be achieved by the teachers and a teacher must have a good performance in learning in school. The factors that affect the performance of teachers in the learning process in schools, among other things: mental attitude, education, management leadership, competence and achievement opportunity. Of the several factors that affect the performance of the teacher performance factors are most important teacher to be ruled by teachers in school, and these factors are factors of teacher competence.

Teacher competence is the combination of personal ability, scientific, technological, social, and spiritual are kafah form teacher professional standards of competence includes the mastery of materials, understanding of learners, educational learning, personal development and professionalism.
Pedagogical competence is the basis for teachers to teach and educate students in the classroom. Within the competence of the teacher, the teacher always face to face with students who definitely need the knowledge, skills, and attitudes to face life in the future. For the role of the teacher is very large and important in demanding responsibility to be individual teachers have extensive knowledge, diverse skills, and morale high.

Personal competence is the ability beraklak personality noble, stable, wise, exemplary, evaluating its own performance, to develop themselves, and religious. In this case the teacher will be able to change the behavior of learners if he had been a good man, so the teacher will be a good example for their students. For that a teacher must have a good personality competency for himself and the students in the learning process in schools.

Social competence is the ability of educators as part of the community to communicate orally and in writing, using information and communication technology functionally interact effectively with pesertadidik and mingle politely with the surrounding community. To the teacher is very important social skills mastered by teachers to achieve educational goals in teaching and educating students.

Professional competence is the knowledge and skills learned by the teacher while in college with her condition began to teach. As an example that a person's success is not only influenced by the intellect but also influenced by emotional and spiritual intelligence even greater than the effect of both intellectual intelligence. So teachers must have the intelligence capability in teaching student at the school.

Competence is a set of knowledge, skills and behaviors that should be owned, lived, and overpoweredy by teachers in implementing the tasks of professionalism. Competence in Indonesian is the uptake of the English language, which means skill competence or ability. Defines competence as a full set of intelligent action and responsibility that I owned a person as a condition for deemed capable by the public in carrying out tasks in accordance with the particular job[3].

the professionalism of teachers is a necessity in creating a knowledge-based school, which is an understanding of the of learning, curriculum and human development, including learning style[4]. In general, the school that teachers have the professional competence will apply learning (to do) to replace a way of teaching where the teacher only spoke and pupils only listen.
