Table S2. Comparison of the prevalence of knee osteoarthritis between the stroke and no-stroke groups

| Variable | Prevalence of knee osteoarthritis | p-value<sup>a)</sup> |
|----------|----------------------------------|---------------------|
|          | No-stroke group                  | Stroke group        |                      |
| Total    | 1059 (19.8)                      | 65 (21.0)           | 0.668               |
| 60–69 y  | 400 (14.5)                       | 23 (14.9)           |                      |
| 70–79 y  | 511 (24.2)                       | 29 (22.1)           |                      |
| ≥80 y    | 148 (31.9)                       | 13 (38.4)           |                      |

Values are presented as number (%).

<sup>a</sup>Using the chi-square test.
