Abstract
We created a reflective teaching log for a student-as-teacher elective to track students’ required participatory teaching and to provide a mechanism for reflective evaluation. This Minute Paper–based log is easy to use and can be adapted to similar programs capturing insights of students’ teaching experiences and supports reflective learning.

Keywords Teaching log · Reflection · Medical education elective · Course requirement

The professional development of medical students has expanded to include a role as an educator. As future physicians, they will be expected to teach medical students and residents both during residency training and as faculty physicians in a university hospital setting. Recognizing this, at least 44% of medical schools now offer medical-student-as-teacher (MST) programs [1]. These programs traditionally include peer or near-peer teaching as well as didactic sessions on the knowledge and skills that are essential to become effective teachers [2]. However, MST students do not necessarily receive feedback from faculty on their teaching performance [2]. A mechanism should be in place to record teaching experiences and allow for an exchange of reflective feedback with the course director about each teaching encounter.

The practice of reflective writing can promote learning through transformation of experience into abstract conceptualization and insights followed by application [3]. Reflective logs have been used to document student experiences during clinical teaching and learning sessions [4]. Data from these student reflections indicate that medical students develop teaching skills, self-confidence, and a professional identity as a medical educator [4]. However, these findings are limited because it may not be practical to gather lengthy reflections after all pivotal teaching experiences [4]. One solution is to incorporate brief Minute Paper elements within a participatory teaching requirement log [5]. The Minute Paper is an assessment technique that allows learners to briefly reflect on and assess their understanding of the material [5].

We developed a brief Reflective Teaching Log (RTL) as a part of our MST elective course offered in the fourth year at the Zucker School of Medicine at Hofstra/Northwell. The MST course is longitudinal and consists of a combination of didactic lectures, workshops, journal club sessions, and a summative capstone project. In addition, students are required to complete 20 h of self-selected teaching, which is documented in the RTL. The RTL was created in Microsoft Excel and is made available to students electronically and stored in a cloud-based platform (e.g., Google docs). Each student shares a link with the Course Directors. This shared spreadsheet streamlined the communication process between students and faculty by allowing for real-time data sharing on their teaching experiences. Students are required to complete the log for each teaching experience including logistical
REFLECTIVE TEACHING LOG RTL

| MEDICAL PEDAGOGY | DATE | # OF HOURS | FACILITATOR | MY ROLE | INSIGHTS, REFLECTIONS & FURTHER ACTIONS | MOST IMPORTANT CONCEPT LEARNED | CONCEPT REQUIRING CLARIFICATION | WHAT IS APPLICABLE TO YOUR FUTURE ROLE AS A RESIDENT |
|------------------|------|------------|-------------|---------|----------------------------------------|-------------------------------|----------------------------------|-----------------------------------------------|
| 1. CASE-BASED LEARNING | 1/24/18 | 3 | Facilitator | Facilitator | Facilitating a case for novice needs attention listening skills. When wrapping up the session, students appreciated the encouragement to share their experience. | Allow silence to encourage deep thinking. |  |  |
| 2. LARGE-GROUP SESSION | 1/29/18 | 2 | Facilitator | Student observer | Discussion with patients is an excellent modality to offer different perspectives and answer questions. | Long small group break-out activities during large group sessions improves engagement. |  |  |
| 3. INTEGRATIVE ANATOMY LABORATORY | 3/18/18 | 5 | Facilitator | MS4 Co-Facilitator | Physical Diagnosis Session complemented by ultrasound for clinical examination. | Team teaching allows providing complementary perspectives, such as imaging. |  |  |
| 4. SIMULATION | 1/17/18 | 3.5 | Facilitator | Standardized Learner | Standardized patients are highly trained experts, and interacting with them reveals important insights relevant for the case and the learner. | It is so important to thoroughly understand the goals of the case and the nuances displayed. |  |  |
| 5. CLINICAL SKILLS/ PD SESSION | 1/12/17 | 1.5 | Facilitator | MS4 Co-Facilitator | Taller instructions to individual needs and student levels, and approach students at the right time for instruction. | Giving a framework for developing differential diagnosis. |  |  |
| 6. SMALL GROUP | 1/14/18 | 3 | Facilitator | MS4 Co-Facilitator | Consistency in education is so important. | Appreciating role in small group sessions. |  |  |
| 7. CLINICAL TEACHING UPON REQUEST | 1/12/18 | 3 | Facilitator | MS4 Co-Facilitator | Step back and allow students to lead a session. | Making students comfortable with the content and voice questions ahead before the role play starts. |  |  |
| 8. OTHER UPON REQUEST | 1/23/18 | 1 | Facilitator | Student Group facilitator | Creating an atmosphere of trust is paramount. Step back from your own plan to allow others to settle into a scenario. | Expect surprising reactions and be ready to comfort. Give others space for their own reaction. |  |  |

Fig. 1 Reflective Teaching Log RTL

Information, educational setting they taught, pedagogy employed, the number of hours taught, their role, and their faculty supervisor. In addition, the major portion of the RTL is comprised of elements of the Minute Paper, such as “most important concept learned,” or “concept requiring clarification” (see Fig. 1, simulated Reflective Teaching Log RTL). These columns prompt students briefly reflect on their experience more broadly, asking them to describe any insights gained, the most important concept they learned, what they needed clarification on, and what specific skill they will take away from the experience. The logs also provided important program related feedback, such as which sessions or pedagogies were most valuable to learners and the diversity of teaching sessions selected.

The RTL is an ideal tool for tracking student teaching and reflective experiences without being overly burdensome for the student or Course Director. It can easily be adapted to different educational settings, and individual variables can be tailored to specific course objectives. We encourage other medical schools to utilize the RTL to track program outcomes quantitatively and qualitatively. The outcomes will ultimately improve curricula focused on training MSTs.

Acknowledgments The authors would like to thank Kevin Brian D. McLeod, AdTalem Global Education, Chicago, for technical assistance editing the teaching log, and Wendy Saori Herman for expert assistance with references. A big thank you to our students who are using the RTL.
