Scattering diagrams from asymptotic analysis on Maurer-Cartan equations. (English)
J. Eur. Math. Soc. (JEMS) 24, No. 3, 773-849 (2022)

Summary: Let $\tilde{X}_0$ be a semi-flat Calabi-Yau manifold equipped with a Lagrangian torus fibration $\tilde{p}: \tilde{X}_0 \rightarrow B_0$. We investigate the asymptotic behavior of Maurer-Cartan solutions of the Kodaira-Spencer deformation theory on $\tilde{X}_0$ by expanding them into Fourier series along fibres of $\tilde{p}$ over a contractible open subset $U \subset B_0$, following a program set forth by Fukaya [Graphs and Patterns in Mathematics and Theoretical Physics (2005)] in 2005. We prove that semi-classical limits (i.e. leading order terms in asymptotic expansions) of the Fourier modes of a specific class of Maurer-Cartan solutions naturally give rise to consistent scattering diagrams, which are tropical combinatorial objects that have played a crucial role in works of Kontsevich and Soibelman [The Unity of Mathematics (2006)] and Gross and Siebert [Ann. of Math. (2) 174 (2011)] on the reconstruction problem in mirror symmetry.

MSC:
14J33 Mirror symmetry (algebro-geometric aspects)
32G05 Deformations of complex structures
14T90 Applications of tropical geometry
53D37 Symplectic aspects of mirror symmetry, homological mirror symmetry, and Fukaya category

Keywords:
scattering diagram; Maurer-Cartan equation; deformation theory; mirror symmetry
