Supplementary Figure S3 Predicted and observed ertugliflozin\textsuperscript{a} plasma concentration vs. time profile in healthy subjects following single (a) 0.5-mg, (b) 2.5-mg, (c) 30-mg, (d) 100-mg and (e) 300-mg oral doses

\textsuperscript{a}Observed data from Nucci \textit{et al.}\textsuperscript{8} The observed and predicted plasma concentrations were expressed as mean (orange circles) and mean (green lines), respectively, with 5\textsuperscript{th} and 95\textsuperscript{th} percentiles shown (gray lines). Standard deviation around the observed means are also shown (black whiskers).

CSys, systemic concentration; ERTU, ertugliflozin; PO, oral.
