This paper is an extended version of Nifontova, G.; Baryshnikova, M.; Ramos Gomes, F.; Alves, F.; Nabiev, I.; Sukhanova, A. Engineering of fluorescent biomaging tools for cancer cell targeting based on polyelectrolyte microcapsules encoded with quantum dots. In Proceedings of the 4th International Conference on Applications of Optics and Photonics, AOP2019, Lisbon, Portugal, 31 May-1 June 2019.

Abstract: Fluorescent semiconductor nanocrystals or quantum dots (QDs) are characterized by unique

Keywords: quantum dots; fluorescent imaging; fluorescent nanolabels; polyelectrolyte microcapsules; antibody-mediated targeted delivery
Figure S1. Quantum dot characteristics (absorption spectrum is shown in dashed line; fluorescence spectrum is shown in solid line; the data on QD hydrodynamic diameter distribution are presented in the inset).
