Supplemental Digital Content: Table 2: Hospital safety reporting system events related to intra-hospital transport of patients admitted to the intensive care unit from the emergency department, before (pre) and after (post) the implementation of the intra-hospital transport checklist.

| Event Number (Pre- or Post- Intervention) | Severity of Harm Classification (Higher numbers indicate more harm) | Medication Issue | Equipment Issue | Wrong team composition | Clinical Instability |
|------------------------------------------|---------------------------------------------------------------|------------------|-----------------|-------------------------|---------------------|
| 1 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         |                     |
| 2 (Pre)                                  | 4H. Event with harm, near death                               |                  |                 |                         | X                   |
| 3 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         |                     |
| 4 (Pre)                                  | 3D. Event without harm, increase monitoring or treatment to prevent harm |                  | X               |                         |                     |
| 5 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event | X                | X               |                         |                     |
| 6 (Pre)                                  | 2B2. Near miss. An event occurred but did not reach the patient because of active recovery by caregivers | X                | X               |                         |                     |
| 7 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         | X                   |
| 8 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         | X                   |
| 9 (Pre)                                  | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         | X                   |
| 10 (Post)                                | 2B1. Near miss. An event occurred but did not reach the patient because of chance alone. |                  |                 |                         |                     |
| 11 (Post)                                | 1A. Unsafe situation that could contribute to an adverse event |                  |                 |                         | X                   |

Severity of harm classification according to Chamberlain JM, Shaw KN, Lillis KA, et al. Creating an infrastructure for safety event reporting and analysis in a multicenter pediatric emergency department network. Pediatr Emerg Care. 2013;29(2):125-130. Contributing factors to the event are marked with an “X.”
