In the article “Changes in Colorectal Cancer During a 20-Year Period: An Extended Report from the Multi-Institutional Registry of Large Bowel Cancer, Japan,” by Kenjiro Kotake, Satoshi Honjo, Kenichi Sugihara, Tomoyuki Kato, Susumu Kodaira, Takashi Takahashi, Masayuki Yasutomi, Tetsuichiro Muto, and Yasuo Koyama, the fifth sentence of the RESULTS section of the Abstract on page S32 was incorrectly worded. The sentence should have read:

“In the multivariate analysis, hazard ratios for death in the postoperative five years were 0.77, 0.59, and 0.66 for proximal colon, distal colon, and rectal cancers, respectively, in the last period as compared with those in the first period.”

The authors regret the error.
