Supplemental Figure 1. Schematic of human and mouse IGF1R protein. A protein schematic showing the different lengths of mouse and human IGF1R, with the mouse arginine at position 408 corresponding to the human arginine at position 407.

Supplemental Figure 2. Body weights of male and female Igf1rtg; Ercc1Δ and Ercc1Δ mice. Graphed are the body weights of individual males (A) and females (B) with the mean and standard deviation for each group. N ≥ 4 per group. p values were determined by an unpaired Student’s t-test *p<0.05, **p<0.01, ***p<0.001.
