Abstrak- The study aims to determine the influence of teacher teaching methods on student achievement, the influence of teacher teaching methods on the motivation of Learning, the influence of parental guidance on the motivation of Learning, the influence of parental guidance on student achievement, the influence of motivation to learn to students’ achievements, how the motivation to learn to influence teacher teaching methods on student achievement. This study was conducted on the SMAK of Santo Yoseph Denpasar. In this research student achievement is influenced by teacher teaching methods, parental guidance and motivational learning. The respondent in this study was 120 students of SMAK Santo Yoseph Denpasar. Data analysis is done using PLS (partial least square). The results showed that teacher teaching methods are positively and significantly impactful to student achievement. Then, teacher teaching methods have positive and significant influence on student achievement, proven. Furthermore, parental guidance positively and insignificantly towards learning motivation, on student achievement, not proven. Learning motivation positive and significant impact on student achievement. The motivation to learn to process the relationship between teacher teaching methods to student achievement, is not proven. The motivation to learn to publish the relationship between parents’ guidance on student achievement, proven.

Keywords: Motivational Learning, Parental Guidance, Student Achievement, Teacher Teaching methods

INTRODUCTION
Student achievement is very important because learning achievement is one illustration of the level of success of the activities during the lesson. One of the goals in the learning process is to achieve an achievement in learning. Learning achievements are learning outcomes obtained by students after following the teaching and learning process carried out by the teacher. There are three teachers for children, namely teachers at school, parents at home and the environment.

It is not surprising that family background has significant power to explain disparities in educational participation and achievement of Lam & Dureux (2013) revealing that there is a positive relationship between communication and academic achievement; as communication improves, academic performance increases. There is also a positive relationship between the highest level of parental education and parental assistance, monitoring, and the higher the level of parental education, the more parents involved.

According to Shulruf & Wang (2011), child development is influenced by the home environment, such as mother-child communication, effective disciplinary methods, home safety and educational activities provided by parents. Parenting practices are the most influential factor influencing children's outcomes. Research conducted by Alcott (2017) revealed that teacher encouragement has the greatest influence on students who are most likely to be on the margin for university attendance. According to Rashid & SaeedUzZaman (2018), teachers have a key role to play in providing a learning environment that
encourages their students to excel academically. Most of the responsibility for the quality of learning therefore falls on the personality and attitude of the teacher. Then, Vahdany, Sabouri, & Ghafarnian (2015) in his study showed that Rasht high school (SMA) students have a positive attitude towards their language teacher, and there is a significant relationship between student-teacher attitudes and student achievement. Encouragement from external factors can have an impact on student achievement but even then it must be supported by students' motivation to learn. Nashar (2004) revealed that the learning motivation of students in each learning activity plays an important role in increasing student achievement in certain subjects. Harahap (2016) revealed that there is a positive and significant influence of learning motivation on student achievement. Hamdu & Agustina (2019) revealed that there is a positive and significant relationship between learning motivation and student achievement.

Based on the theory and empirical evidence described above, it can be seen the importance of teacher teaching methods and parental guidance in a child's life, especially for the child's achievement. According to Sutikno (2013) states the Teaching Method is ways of presenting subject matter conducted by educators so that the learning process occurs in students in an effort to achieve goals. However, the results of the National Survey on Life Experience of Children and Adolescents show two out of three children have experienced violence. One in 11 girls and one in 17 boys experience sexual violence (Kompas, 11/1/2020). In addition, Law No. 14/2005 on teachers and lecturers (UU GD) stipulates teacher professionalism based on four competencies and certifications obtained from teacher professional education (PPG). Based on observations made by the author of class XII students at St. Joseph's Public High School showed that students have a good close relationship with parents as always attentive by asking about activities in school and helping in the learning process. In addition, the expected teaching methods are those that are not boring (monotonous), modern and more into practice. As for the teaching methods of the teacher 44% of children were not satisfied, 22% were satisfied and 22% were quite satisfied.

CONCEPT AND HYPOTHESIS

Based on the description from previous studies, it can be described that the conceptual framework proposed from this study is as follows.

![Figure 1. Conceptual Framework for Research](image)

Based on the theories, concepts and previous studies relating to student achievement as described in the literature review section, it can be formulated and explained the hypotheses in this study as follows. H1: Teacher teaching methods have a positive and significant effect on student achievement. H2: Teacher teaching methods have a positive and significant effect on learning motivation. H3: Parental guidance has a positive and significant effect on learning motivation. H4: Parental guidance has a positive and significant effect on student achievement. H5: Learning motivation has a positive and significant effect on student...
The Influence of Teacher Teaching and Guidance of Parents on Student Achievement with Mediation of Learning Motivation in Santo Yoseph Denpasar

achievement. H6: Learning motivation acts as a mediation between teacher teaching methods and student achievement. H7: Learning motivation acts as a mediation between parental guidance and student achievement.

Population and Research Samples
1) Population
   The population in the study were students at the St. Joseph High School Denpasar.
2) Samples
   Students of class X and XI of St. Joseph High School in Denpasar with criteria selection. To determine the sample size of the population, the Slovin formula (Husein Umar, 2011; 383) can be used.

Research variable
Supporting variables in this study are 1) Teacher Teaching Method, 2) Parental Guidance, and 3) Student Achievement. Teacher Teaching Method Variables (X1) and Parental Guidance (X2) are independent variables while Learning Motivation Variables (Y1) as mediation Student Achievement Variables (Y2) are dependent variables.

Definition of Variable Operations
Student Achievement (Y1)
Learning achievement is the result or achievement of one's efforts in the teaching and learning process in the form of numbers, letters, symbols and sentences. In this study the indicators used to assess student achievement are.
1) Mid-semester exam results
2) The value of individual assignments and the value of group assignments
3) Homework (PR)
4) The activity value includes the activity value in the class
5) Semester exam results

Motivation to learn
Learning motivation is all efforts to encourage both from within and from outside in the process of gaining knowledge. Indicators of learning motivation (Uno, 2010) can be classified as follows.
1) The desire and desire to succeed.
2) There is encouragement and needs in learning.
3) There are hopes and ideals of the future.
4) There is an appreciation in learning.
5) There are interesting activities in learning.
6) The existence of a conducive learning environment.

Teacher Teaching Methods (X1)
Teacher teaching methods are systematic ways that are carried out by educators (teachers) in the teaching-learning process. Indicators according to Government Regulation no. 19 of 2005 used to measure the teaching methods of teachers in this study are as follows.
1) Understanding the characteristics of students with physical, social-emotional, and intellectual disorders who need special handling.
2) Mastering the basic principles of teaching and learning that educate.
3) Develop a curriculum that encourages student involvement in learning.
4) Assess the process and learning outcomes that refer to the whole purpose of education.
5) Mastering teaching material in the curriculum
6) Strong, stable, mature, wise and authoritative personality abilities that will set an example for participants and have good morals.

Parental Guidance (X2)
Parental guidance is a special process of assistance given by parents in the learning process, developing potentials, recognizing oneself and being responsible for children's lives. Indicators that will be used in this study (Hasbullah, 2013).
1) Give love
2) Give moral obligations
3) Give social responsibility
4) Nurturing and raising children
5) Providing education, knowledge and skills
6) Provide learning facilities
7) Helps learning difficulties
8) Give an example or example
9) Give a reward or punishment
10) Give freedom

METHOD

Copyright © 2020 Jurnal Ekonomi dan Bisnis Jagaditha EISSL 2579-8162
This study was conducted on the SMAK of Santo Yoseph Denpasar. In this research student achievement is influenced by teacher teaching methods, parental guidance and motivational learning. The respondent in this study was 120 students of SMAK Santo Yoseph Denpasar. Data analysis is done using PLS (partial least square) (Latan & Ghozali, 2012). Then, data are presenting in form of table and after that the data was interpreted descriptively.

RESULTS AND DISCUSSION
Characteristics of Respondents
This study was conducted to determine the effect of teacher teaching methods and parental guidance on student achievement by mediating learning motivation at the St. Joseph Senior High School Denpasar. Data collection was carried out through distributing questionnaires to 120 students in grade X and XI.

Construction Reliability Test
The results of the reliability test of the research instrument showed that the value of alpha cronbachs in each construct was> 0.60 which means that the reliability of all research variables was categorized as good and accepted.

Test Validity of Research Instruments

Table 1
Test the validity of Constructing Item Teacher Teaching Methods (X1), Parental Guidance (X2), Learning Motivation (Y1), Student Achievement (Y2)

| No | Indicators of Teacher Teaching Methods (X1) | Correlation coefficient | Information |
|----|---------------------------------------------|-------------------------|-------------|
| 1  | The teacher tries to understand each student's difficulties and provides a joint solution (X1.1) | 0,865 | Valid |
| 2  | The teacher is able to explain the subject matter well and is easily understood (X1.2) | 0,894 | Valid |
| 3  | Teachers provide opportunities for students to be actively involved in learning and teaching activities (X1.3) | 0,720 | Valid |
| 4  | The teacher has the ability to be steady, stable, mature, wise and authoritative who will set an example for participants-as well as having good morals (X1.4) | 0,821 | Valid |
| 5  | The teacher masters teaching material in the curriculum (X1.5) | 0,831 | Valid |

| No | Indicators, Parental Guidance (X2) | Correlation coefficient | Information |
|----|-----------------------------------|-------------------------|-------------|
| 1  | Parents give love (X2.1) | 0,850 | Valid |
| 2  | Parents give moral obligations (X2.2) | 0,837 | Valid |
| 3  | Parents give social responsibility (X2.3) | 0,829 | Valid |
| 4  | Parents nurture and raise you (X2.4) | 0,730 | Valid |
| 5  | Parents give Education, knowledge and skills (X2.5) | 0,839 | Valid |
| 6  | Parents provide learning facilities (X2.6) | 0,760 | Valid |
| 7  | Parents set an example or example (X2.7) | 0,855 | Valid |
| 8  | Parents help learning difficulties (X2.8) | 0,719 | Valid |
| 9  | Parents give rewards or punishments (X2.9) | 0,653 | Valid |
| 10 | Parents give freedom (X2.10) | 0,339 | Valid |

| No | Learning Motivation Indicator (Y1) | Correlation coefficient | Information |
|----|-----------------------------------|-------------------------|-------------|
| 1  | Persevering in the task (Y1.1) | 0,598 | Valid |
| 2  | Resilient in facing difficulties (Y1.2) | 0,669 | Valid |
| 3  | Showing interest in various problems (Y1.3) | 0,659 | Valid |
The Influence of Teacher Teaching and Guidance of Parents on Student Achievement with Mediation of Learning Motivation in Santo Yoseph Denpasar

| No | Student Performance Indicator (Y2) | Correlation coefficient | Information |
|----|-----------------------------------|-------------------------|-------------|
| 1  | Mid Semester Exam Results Above KKM (Minimum completeness criteria) (Y2.1) | 0.770 | Valid |
| 2  | Assignment score above KKM (Y2.2) | 0.749 | Valid |
| 3  | Good class activeness (Y2.3) | 0.628 | Valid |
| 4  | Semester exam results above KKM (Y2.4) | 0.794 | Valid |

Evaluation of Measurement Model (Measurement Model/outer Model)

**Convergent Validity**

Convergent validity is a criterion in measuring the validity of indicators that are reflexive. This evaluation is done through an examination of the outer loading coefficient of each indicator of its latent variable. The analysis shows that all indicator values indicate outer loadings that the estimation results have shown are valid, which are> 0.50 and statistically significant. These results can be seen further in Figure 2 and Figure 3.

![Figure 2. Outer Loading and Path Analysis Estimated Results](image)

While the results of calculations regarding the results of its significance test (boothstrapping) before the reconstruction can be seen in Figure 3.

![Figure 3. Boothstrapping (Statistical Test)](image)
Discriminant Validity

Measurement of the validity of the indicators that form latent variables can also be done through discriminant validity by looking at the value of $\sqrt{AVE}$ and AVE. Indicators are considered valid if the AVE value of each construct $> 0.50$ and the value of $\sqrt{AVE}$ throughout the construct $> 0.50$. The analysis showed that the AVE value of all constructs $> 0.50$ and the value of AVE for parental guidance $= 0.825$; teaching method $= 0.843$; learning motivation $= 0.724$ and learning achievement $= 0.762$ is greater than the correlation value between constructs that is between 0.431 to 0.689 so it is declared valid based on discriminant validity criteria.

Composite Reliability and Cronbach Alpha

A measurement can be said to be reliable, if the composite reliability and Cronbach alpha have a value greater than 0.70. Composite reliability and Cronbach alpha are a measure of reliability among indicator blocks in the research model. The analysis results show that the composite reliability value of each construct shows a value greater than 0.70. From the Cronbach Alpha value, only learning motivation has a slightly lower value of 0.70, so overall the entire construct is declared valid based on composite reliability.

Evaluation of Structural Models Through R-Square (R²)

According to Latan & Ghozali (2012), an R-Square (R²) value of 0.67 is classified as a strong model, R-Square (R²) of 0.33 moderate model, and R-Square (R²) of 0.19 is classified as a weak model. The results of the analysis showed based on the Chin criteria (Latan and Ghozali, 2012: 85), then the model included the weak model criteria, the meaning was the variation of teaching methods and parental guidance was able to explain variations in learning motivation by 16.20% percent, the remaining 83.80% percent is explained by variations of other variables outside the analyzed model. Student achievement has an R² value of 0.387 based on Chin criteria (Latan & Ghozali, 2012: 85), then the model includes moderate criteria, the meaning is variation of teaching methods, parental guidance and learning motivation is able to explain variations in performance by 38.70% percent, the remaining 61.30% percent is explained by variations in other variables outside the analyzed model.

Evaluation of Structural Models through Q-Square Predictive Relevance (Q2)

Q-Square Predictive Relevance (Q2) is a measure of how well the observations made give results to the research model. The value of Q-Square is $= 1 - (1 - R12) (1 - R22) = 1 - (1 - 0.162) (1 - 0.387) = 1 - 0.514 = 0.486$, based on these results, the estimation model is included in the criteria strong, meaning that 48.60% of variation in endogenous constructs can be predicted by variations in exogenous constructs.

Evaluation of Structural Models through Goodness of Fit (GoF)

Goodness of Fit (GoF) is a measurement of the accuracy of the overall model (global), because it is considered to be a single measurement from the measurement of the outer model and measurement of the inner model. Calculation with GoF shows an average value of R² of 0.275 while an average of $\sqrt{AVE}$ of 0.789, then a GoF value of A $\sqrt{R2 * A \sqrt{AVE}} = \sqrt{0.275 * 0.789} = \sqrt{0.217} = 0.466$ This means that the global model is strong predictive (large ).

Path Analysis and Testing Hypotheses

Path Analysis and Testing The expected hypothesis is that Ho is rejected or sig <0.05 (or t-statistic value> 1.96 with a significance level of 0.05).

| CONSTRUCT | Original Sample (O) | Sample Mean (M) | Standard Deviation (STDEV) | T Statistics (O/STERR) | P Values | Information |
|-----------|-------------------|-----------------|-----------------------------|------------------------|----------|-------------|
| PARENT GUIDANCE -> LEARNING MOTIVATION | 0.112 | 0.144 | 0.108 | 1.034 | 0.302 | Positive But Not Significant |

Table 2. Path Analysis and Testing Statistics
The Influence of Teacher Teaching and Guidance of Parents on Student Achievement with Mediation of Learning Motivation in Santo Joseph Denpasar

| PARENT GUIDANCE -> STUDENT ACHIEVEMENTS | -0.028 | -0.026 | 0.117 | 0.290 | 0.772 | Negative and Not Significant |
|----------------------------------------|--------|--------|-------|-------|-------|-----------------------------|
| TEACHING METHODS -> LEARNING MOTIVATION | 0.330  | 0.326  | 0.108 | 2.905 | 0.004 | Positive and Significant    |
| STUDY MOTIVATION -> STUDENT ACHIEVEMENTS | 0.296  | 0.295  | 0.117 | 3.067 | 0.002 | Positive and Significant    |

As shown in the Table 2 that Parental guidance has a positive effect of 0.112 on learning motivation and the relationship is not significant at the 0.05 level because the P-value is 0.302 > 0.05. Parental guidance has a negative effect on student achievement of -0.028, and the relationship is not significant at the 0.05 level with a P-value of 0.772 > 0.05. The teaching method has a positive effect of 0.330 on learning motivation and the relationship is significant at the 0.05 level with a P-value of 0.04 < 0.05. The teaching method has a positive effect on student achievement by 0.296 and the relationship is significant at the 0.05 level with a P-value of 0.02 < 0.05. Learning motivation has a positive effect on student achievement by 0.457 and the relationship is significant at the 0.05 level with a P-value of 0.00 < 0.05.

The Effect of Teacher Teaching Methods on Student Achievement at St. Joseph's Senior High School Denpasar

The results of the analysis showed that the teaching methods of the teacher had a positive and significant effect on the achievement of the students of the St. Joseph Senior High School in Denpasar. This positive and significant influence shows that the better the teacher's teaching methods, the student's achievement increases. This means that when teachers master teaching materials in the curriculum and provide opportunities for students to be actively involved in learning and teaching activities, the value of student assignments increases above the minimum completeness criteria (KKM) and student activity in the classroom either.

The results support the results of research conducted by Alcott (2017) revealed that teacher encouragement can help the advancement of student education especially those with parents with low education. Rashid & SaeedUzZaman (2018) revealed that teachers have a key role to play in providing a learning environment that encourages their students to excel academically.

The Effect of Parental Guidance on Students' Learning Motivation at St. Joseph's High School in Denpasar

The results of the analysis show that the teaching methods of the teacher have a positive and significant influence on the motivation to learn students at the St. Joseph Senior High School Denpasar. This positive and significant influence indicates that the better the teacher's teaching methods, the higher the student's achievement. The reality in the field shows that when the teacher masters the material in the curriculum, the teacher gives the opportunity for students to be actively involved in learning and teaching activities so students are more diligent in facing assignments and tenacious in facing difficulties.

The results of this study support research conducted by Sucia (2017) stated that there is a positive and significant influence of teacher communication on student motivation. Sutardi (2016) revealed that there was a positive and significant influence between teacher competencies on learning outcomes. Raisyifa & Sutarni (2016) revealed the positive and significant influence of teacher teaching methods on learning motivation. Robih, Suratman, & Soesatyo (2017) stated that there is an influence between teachers and learning motivation. Korur & Eryilmaz (2019) in his research revealed that students would be disappointed if their teacher avoided asking questions, difficulties in solving problems and teacher's inconsistent attitude.

The Effect of Parental Guidance on Students' Learning Motivation at St. Yoseph SMAK Denpasar

The results of the analysis show that parental guidance has a positive but not significant effect on the motivation to study students at the St.
The Influence of Teacher Teaching and Guidance of Parents on Student Achievement with Mediation of Learning Motivation in Santo Joseph Denpasar

Joseph Senior High School in Denpasar. This positive and insignificant influence means parents maintain, nurture, give love and learning facilities, students are happy but unable to increase student motivation. This can arise because although parents provide facilities, love, nurture and nurture, but parents have not been able to help students' learning difficulties that can motivate students.

The results of this study are not in line with the results of research conducted by Ningsih (2013) stated that the role of parents in motivating children in school is as a motivator supporting children to progress, facilitators bridging between children with teachers and the community and also the mediator.

The Effect of Parental Guidance on the Achievement of St. Joseph's High School Students

The results of the analysis show that parental guidance has a negative and not significant effect on the achievement of students of the St. Joseph Senior High School in Denpasar. This negative effect is due to the characteristics of respondents aged 15-18 years, adolescents who are growing up. This can also occur when parents provide facilities, maintain and grow, but on the other hand parents are less able to set an example or example and help students' learning difficulties as well as the lack of appreciation of parents in giving rewards that can improve student achievement.

The results of this study are not in line with the results of research conducted by Sulaeman (2016) revealed a positive and significant influence between parental guidance and student achievement. However, the results of this study are consistent with Hendriyanto (2016).

The Effect of Learning Motivation on the Achievement of St. Joseph's High School Students in Denpasar

The results of the analysis show that learning motivation has a positive and significant effect on the achievement of students of the St. Joseph Senior High School in Denpasar. This positive and significant influence shows that the better the motivation to learn can improve student achievement at the St. Joseph Senior High School Denpasar. This shows that students are diligent and tenacious in facing tasks so that the value of their assignment is above the minimum completeness criteria (KKM).

The results of this study are in line with the results of research conducted by Makrifat (2012) revealing a positive and significant influence between intrinsic and extrinsic motivation on student achievement. Sutardi (2016) revealed that there is a positive and significant influence of learning motivation on student achievement. Harahap (2016) revealed a positive and significant influence between learning motivation and student achievement. Rizkianna (2014) showed that there was a partially significant influence between parents' socioeconomic status, learning motivation, and learning discipline on learning achievement. Kumala (2016) revealed the positive and significant influence of learning motivation on student achievement.

Motivation for Learning Role as Mediation Between Teacher Teaching Methods Against Student Achievement of St. Joseph's Senior High School Denpasar

Based on the criteria of Hair Jr, Black, Babin, & Anderson (2010) learning motivation is a partial mediation between teacher teaching methods and student achievement. Learning motivation variable has not been able to explain the relationship between teacher teaching methods and student achievement because the direct relationship between teacher teaching methods and student achievement is significant, and student learning motivation has a significant direct relationship to student achievement. The meaning of the role of mediating variables here shows that the effect of teaching methods on student achievement has not been able to be conveyed properly by learning motivation, in other words learning motivation does not mediate the direct relationship of teacher teaching methods to student achievement at St. Joseph's High School Denpasar.

The results of this study are not in line with the results of research conducted by Rizqi (2015) expressed that indirectly the pedagogical competence of teachers and learning facilities through learning motivation as a mediating variable influences learning outcomes. Sinaga (2015) revealed through the mediation test of
student learning motivation, the basic skills of teaching teachers also have an influence on improving student learning outcomes.

Motivation for Learning Role as Mediation Between Parental Guidance Against the Achievement of Students of Santo Yoseph SMAK Denpasar

Learning motivation is a full mediation between parental guidance and student achievement. The findings of this study reveal that parental guidance has an important effect on learning motivation, while learning motivation has an important impact on the achievement of students of the St. Joseph Senior High School Denpasar. The meaning of the role of mediation here shows that the influence of parental guidance on student achievement is well conveyed by learning motivation.

The results of this study are in line with the results of research conducted by Mauliddya & Rustam (2019) revealing a positive and significant effect of mediating learning motivation on parental guidance on student achievement. Muhidin (2018) revealed there is a positive influence of parental support on student achievement mediating learning motivation. Hedyanti, Sudarmiati, & Utaya (2016) revealed the variable of learning motivation strengthens the direct effect of parenting parents on students' social studies learning achievement. Astuti (2019) revealed that learning motivation mediates the effect of parents' attention on student learning outcomes.

CONCLUSION

Based on the description and results of the study can be concluded that the effect of teacher teaching methods on student achievement has a positive and significant influence. The effect of teacher teaching methods on learning motivation has a positive and significant effect. The influence of parental guidance on learning motivation has a positive but not significant effect. The influence of parental guidance on student achievement has a negative and insignificant influence. The influence of learning motivation on student achievement has a positive and significant influence. This positive and significant influence shows that the better the motivation to learn can improve student achievement at the St. Joseph Senior High School Denpasar. Learning motivation acts as a mediation between the teaching methods of teachers on the students’ achievement of the Santo Yoseph Senior High School Denpasar showing the results that learning motivation is a partial mediation between the teaching methods of teachers on student achievement. Learning motivation acts as a mediation between parental guidance on student achievement in St. Yoseph Denpasar Senior High School showing the results that learning motivation is a full mediation between parental guidance on student achievement.
