SUPPLEMENTAL APPENDIX B: STUDY EXCLUSION/INCLUSION PROCESS

3,048 records identified through database search

372 records screened

132 records excluded

240 full text articles assessed for eligibility

72 studies excluded:
- 33 individually randomized
- 9 not true MDA studies
- 16 not unique studies
- 2 historical mass quinine distribution
- 8 short-term residents of endemic areas (e.g., military, laborers)
- 4 targeted sub-groups

32 studies included in Cochrane Review

182 sub-studies included in background paper analysis

1 Studies in which the primary focus was not MDA (e.g., historical program reviews that made mention of MDA, or community surveys done in conjunction with MDA)

2 Multiple phases of the same study that were published individually

3 Treatment given at milestones rather than calendar dates (e.g., intermittent preventive treatment to infants coinciding with vaccination schedule, or to pregnant women coinciding with trimester check-ups)
