Abstract. Education is one of the technological needs that must be needed. People’s lifestyle in the present era raises the emergence of developments in various fields and one of its technologies. The changes in learning patterns are required to perform the update following the dynamics of the changing times of increasingly rapid developments triggered by technology. Technology in education is very helpful in the world of education, one of which is laptop technology. Laptop is an advanced technology designed with various applications in it. The application in it is an application that has different uses that greatly help the human needs of one of the teachers and students in an education.

1. Introduction

Husain (2014) said that education is the most important thing that must be obtained by the community in accordance with its level. Education is very useful for developing and giving insights in the knowledge that makes people from not knowing to know (Prozesky, 2000). Education is obtained from the family environment, namely parents as educators. Where parents teach and educate fundamentally both in behavior and thought, the school environment is the teacher as an educator. The teacher provides education outside the family environment, where the teacher provides knowledge both in theory and practice by using methods in appropriate learning, and the community environment as well as educators of the experience gained. The community has a very important role, because the
education that has been obtained through family and school will be applied to the community, so the community also assesses and provides good education to students. From the distribution of education, education is highly equitable, both within the family, school and society, if an education is not carried out there will be a deviation and deterioration in character and have things and behavior that is not good.

The development of the era in this era of globalization is very rapid, with various developments in the advancement of technology from the previous ordinary and extraordinary. This progress has a very positive and negative impact (Aunnurahman, 2012). The positive impact of technological development can be felt by humans, where an advanced technology greatly facilitates various human activities in daily life. The negative impact of technological developments on humans, wrong technology can make a criminal from malicious behavior.

One of the rapid technological developments that is very useful in an education, one of which is laptop technology (Budi, 2014). Laptop is a technology that is needed by everyone, especially for students in attending an education, so the author wants to explain the usefulness of laptop technology in the world of education.

2. Discussion

Technology in this era of globalization has been designed for sophistication, this greatly helps humans in the use of technology. Technology is very much needed, this is because it is very helpful for humans to solve everything in a fast time. The more rapid development of the era is the more sophisticated technology that will be designed. The sophistication of a technology must be considered, so that it is not wrongly used which will have a negative impact on the perpetrators and the community (Danim, 2011).

Education is one of the technological needs that must be needed (Munawaroh, 2009). Technology in education is very helpful in the world of education, one of which is in the learning process between educators and students, such as in the learning process, where the teacher provides a material using laptop technology which already contains data programs both learning through theory in the form of writing and delivery of material through videos that have been designed (Shyamlee, 2012). The teacher will not be difficult to carry a laptop everywhere in giving a material to students. Then an education, teachers and students must use technology by mastering technology, one of which is the best possible laptop technology, if utilized properly, it will have a positive effect.

Laptop is an advanced technology designed with various applications in it (Dantes, 2014). Laptops are designed with practical purposes to carry anywhere and complete with applications that have different benefits. The application in it is an application that has different uses, such as for example Microsoft which is very useful for neatly writing and reporting. Laptops are very practical to use and are very easy to carry everywhere and have various sizes.

In education, laptops are a technology that is very well used, this is because an application contained in it facilitates the world of education, both used by educators and students (Kristiani, 2016). In the world of education is required to use a developing and sophisticated technology that is useful in an education, this is very helpful for educators and students to learn to use technology that has developed rapidly. This development occurs because of the influence of time and the human mindset that makes a desire that must be obtained in an easy way to get a goal. Laptop security in an education, namely (Nasution, 2000):

a. Can help write good reports, papers by learning to use Microsoft Word properly. Microsoft word really helps make the task neat by sharing its features such as, Home, Insert, Page Layout, References, Mailings, Reviews, View. By utilizing and learning well, this feature is very useful.

b. Can help present papers well by using Microsoft power point. Microsoft also has features such as, Home, Insert, Animations, Design, Slide Show, Review, and View. With this feature, it can make a writing design that will be presented and to add creativity can use animations well to make the presentation good and quality.
c. In addition to having a variety of applications in it, laptops are very easy to use anywhere and can be taken anywhere in accordance with the desire to find an atmosphere to do tasks both from school, office and others and have varying sizes according to our interests.

d. A very affordable price that aims to help the community, especially in the world of education, to have laptop technology that is aimed at education.

3. Conclusion

In conclusion, by the rapid development in this era, technology becomes the thing that is developed so fast as well. That technology affects the education and education changes in learning patterns are required to perform the update following the dynamics of the changing times of increasingly rapid developments triggered by technology.

Laptop is an advanced technology designed with various applications in it. Laptops are designed with practical purposes to carry anywhere and complete with applications that have different benefits. The application in it is an application that has different uses, such as for example Microsoft which is very useful for neatly writing and reporting. Laptops are very practical to use and are very easy to carry everywhere and have various sizes.

From the explanation above, it can be concluded that:

a. Education is something that must be obtained by all humans, education aims to broaden knowledge and educate the human mindset.

b. Education must also utilize technology that has developed rapidly in this era of globalization.

c. Laptop is a technology that is very helpful in education in the learning process for both educators and students.

d. Laptops also have uses that can be easily used by students and the public and can be carried everywhere with a variety of different sizes of laptops.

Furthermore, the relation between the education and technology especially the functions of laptop in education, are: (1) can help write good reports, papers by learning to use Microsoft Word properly; (2) can help present papers well by using Microsoft power point; (3) laptops are very easy to use anywhere and can be taken anywhere in accordance with the desire to find an atmosphere to do tasks both from school, office and others and have varying sizes according to our interests; (4) laptop has very affordable price that aims to help the community, especially in the world of education, to have laptop technology that is aimed at education.
