This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
Highlights

- We model trading interactions of money and commodities/services in a network of agents with dyadic interactions.
- The results obtained agree very well with published data of wealth distribution in different countries and price distribution.
- One striking result is the effect of trust in trading relations. Trust reinforces trading transactions, and helps to make society more even and the distribution of wealth is fairer.
- This model allows us to predict that the fundamental features in trading are the freedom to change prices and the importance of trust in dyadic interactions.
