Supplementary Figure 1

(a) Diagram showing the domain structure of BirA*-p210-BCR-ABL and the shUbash3b treatment.

(b) Western blot analysis showing the expression of BirA*-p210-BCR-ABL and shUbash3b. Proteins probed include anti-Abl, anti-Cbl, anti-Stat5a, anti-Dok1, anti-CrkL, anti-Ubash3b, and anti-β-Actin.

(c) Schematic representation of the protein domains and their interactions.

(d) Heatmap showing the expression levels of various proteins across different conditions.

(e) Summary of the experimental conditions and the detected proteins.
