Sexual harassment

ABSTRACT

Sexual harassment is a social problem that needs urgent attention to reduce its frequent occurrence. This paper is a systematic literature review (SLR) that summarizes the previous studies of sexual harassment from Islamic state universities (UIN) in Indonesia. Data were collected from the final year bachelor's theses available in the online library repository of UIN Syarif Hidayatullah Jakarta, UIN Walisongo Semarang, UIN Sunan Ampel Surabaya, UIN Ar-Raniry Aceh, UIN Alauddin Makassar and UIN Raden Fatah Palembang with open-access facilities. The SLR and Meta-analysis were used to investigate the background, perpetrator-victim involvement, and resolution of sexual harassment. This research used 20 eligible and relevant theses for the study of sexual harassment have been published from 2007 to 2022. The result showed that most cases occurred in urban areas, where the perpetrators are people known to the victim, such as family members, colleagues at work, neighbors, and playmates. Therefore, the role of non-governmental organizations and local governments is very helpful for victims to form coping strategies and report criminal cases. Sexual harassment needs to get more public attention by strengthening litigation and non-litigation needs, accompanied by the provision of sexuality education for parents, children, and the community.

1. Introduction

Sexual harassment is an intentional and purposeful act to intimidate, demean, humiliate or sexually assault the victim (Quick and McFadyen, 2017). It is also characterized by making unwelcome and inappropriate sexual remarks or physical advances in the workplace or other professional and social gatherings. The basic difference between sexual harassment and other behaviors is the willingness of the individuals involved, known as consent (Beres, 2014). In this disruption era, it is revealed to the public through media coverage and social-virtual networks, although many cases have ended without a clear resolution. According to Nurbayani et al. (2022a), victims of sexual harassment, including those in their immediate social environment, often regard the case as a disgrace. It sometimes triggers the emergence of post-traumatic stress disorder when victims not properly handled. In Indonesia, various sexual harassment has become a concern since the issue of women's protection and violence started in the parliament. The Indonesian Ministry of Education, Research and Technology has issued a minister regulation ‘Permendikbud’ Number 30/2021 concerning the Prevention and Handling of Sexual Violence in Higher Education (Adawiyah et al., 2022). The scope of policy which only revolves around educational institutions, is still not strong enough to protect potential victims, this is a signal that there are many cases of sexual harassment in the country.

The involvement of higher educational institutions, especially universities, in sexual harassment, can be viewed from an academic perspective (Clancy et al., 2020). Many faculties offer study programs (departments) and centers capable of researching this topic. This role further strengthens the knowledge and dedication of universities to the community and provides a tangible impact on the prevention of sexual harassment. In-depth studies are reflected in the final projects carried out by students under the lecturers supervision (Boud and Costley, 2007). These are experts in specific fields, and they are usually active in study groups and teach specialized courses. The final project also has to align with a concentration that students need to choose when they reach third
academic year. It is common to find at least two concentration areas in any study program held at Indonesian campuses. The research output, final project, has received less attention from the public or fellow academics, even though the campus librarian had stored these documents online through a repository managed internally (Irawan et al., 2021). Several review studies on cases of sexual harassment only use databases from global indexers such as Copernicus, DOAJ, EBSCO, Scielo, Scopus, Web of Science, etc.

A few studies on sexual harassment adopted the systematic literature review (SLR) method. Karami et al. (2021) reported that the work environment was one of the popular themes raised. The most vulnerable are people with disabilities or those suffering from chronic diseases. Hunt et al. (2010) developed three models related to sexual harassment, such as primary, secondary, and intervention. However, McDonald (2012) focused on manuscripts that have been published over the past 30 years. It was reviewed that the management and organization, evaluation of evidence, and investigation of certain areas required further treatment. Victims of sexual harassment include adults, teenagers, and children. Popovic (2018) stated that child sexual abuse studies are the basis of news media coverage, cases reported to the authorities, and media presentations.

Previous research seems to focus on articles published in journals or proceedings, despite the availability of library repositories provided by many campuses for the extraction of relevant information and its indexed by Google Scholar. They provide a repository to maximize the impact of proceedings, despite the availability of library repositories provided by

2. Research method

This study adopted a systematic literature review (SLR) which refers to the Preferred Reporting Items for Systematic Reviews and Meta-Analysis (PRISMA) (Valizadeh et al., 2021). SLR uses previous studies to answer research questions, and it differs from traditional literature reviews, it is more transparent, replicable, and scientific for theoretical development in specific fields (Puggina et al., 2018; Franco and Groesser, 2021). The protocol involved in this study has been systematically compiled and listed on OSF Registries (https://osf.io/5mm7g). OSF is a provider of protocol registration services for various studies, including for SLR studies and meta-analysis (Harrer et al., 2021).

2.1. Search strategy and eligibility criteria

The data was obtained from bachelor's theses at the online repositories of Islamic state higher education under the Indonesian Ministry of Religion Affairs, precisely at the campus classified as 'Universitas Islam Negeri' or UIN (The Islamic State University). Currently, 23 campuses are officially in this category, although this number tends to increase with the transformation movement of 'Institut Agama Islam Negeri' or IAIN (The Islamic State Institute) to UIN (Suharto and Khurijah, 2014; Ariffin, 2021). This transformation affects to scope of scientific activities, it becomes more flexible to study natural sciences, social sciences and humanities, and technology like secular campuses. Therefore, data sources were selected using several criteria, such as the establishment of UIN in 2017, which serves as an online repository that is open-access (full-text available), also has studied social sciences and humanities as reflected in the relevant faculty. This led to selection of 6 campuses from UIN Syarif Hidayatullah Jakarta, UIN Walisongo Semarang, UIN Sunan Ampel Surabaya, UIN Alauddin Makassar, UIN Ar-Raniry Aceh, and UIN Raden Fatah Palembang, as shown in Table 1. They provided open access, with some registered in the Directory of Open Access Repository (DOAR) (Priyanto, 2015). The search strategy used the keywords 'pelecehan seksual' (sexual harassment), 'kekerasan seksual' (sexual violence), and 'kejahatan seksual' (sexual crime).

2.2. Selection process

Despite using these keywords, not all the titles were properly selected because the search field resulted 2533 thesis. Checking titles and abstracts to know the general content are needed. This step led to 35 theses because the titles and abstract sections contain a case study approach. These were carefully read to overview the research questions, its scope, and methodology. This research not differentiate theses in terms of systematic writing, because it usually adapts to the policies of each campus. Some faculties and study programs have a different thesis presentation, although it can be minor in the section or subsection (Paltridge, 2002; Paltridge and Starfield, 2007).

2.3. Data extraction

Assessment is the first step to ensure that a scientific work contains a relevant methodology to the research objectives (Snyder, 2019). In this context, these are suitable for SLR analyses, and it needs to contain an observational case study using quantitative or qualitative approaches. The full-text content sequentially starts with the introduction, theoretical studies, research methods, results and discussion, and finally, the concluding aspect, which is essential to provide a complete understanding of the writing purpose. Applying special criteria to sort out scientific works in the review process is necessary. The main criteria are must be a case study and the victims and perpetrators need to be involved. These stages found 20 theses are eligible for further analysis, and the details are shown in Figure 1. The authors carried out data extraction after initially agreeing to the criteria. Sexual harassment includes delinquency, physical violence, sexual assault, lewd conduct, and pedophilia (Nurbayani, 2021).

2.4. Quality assessment and data analysis

The main standard was set that all documents need to be open access from the cover to the appendix. At least five criteria were used to monitor the scientific work for SLR analysis, 1) undergraduate thesis and is guided by at least one supervisor; 2) origin of the relevant study program and faculty; 3) presenting case studies; 4) serving the background information on locations, perpetrators, and victims who contain their interaction; 5) presenting case's resolution. Two investigators also performed this assessment to evaluate the feasibility of theses as study material and discuss it with the authors. Quality assessment involving other parties is an extra effort because the involvement of more experts is better than one (Priharsari, 2022). Data from these were further processed using the content analysis method, which is useful for obtaining in-depth written information (Khirfan et al., 2020a,b; Lee et al., 2021). A qualitative approach provides various flexible interpretations, builds interconnections, emphasizes problems, and discerns gaps (Khirfan et al., 2020a,b).

3. Results

Most of the research on sexual harassment (80%) are from Java Island, spreading across UIN Jakarta, UIN Semarang, and UIN Surabaya with nine, four, and three theses, respectively. Those from UIN Palembang and UIN Makassar published in the past five years – after 2017 were included (Table 2). UIN Aceh did not fit the criteria, therefore the works were excluded from this analysis. The past eligible theses used to discuss this issue were obtained from UIN Jakarta, where sexual harassment has been discussed since 2007 by Karyanti. Meanwhile, Sunti, 2022 carried
out a study on verbal sexual harassment in Surabaya. The difference in distribution proves that state universities in Sumatra, Kalimantan, and Sulawesi were formerly branches of campuses on Java (Esha, 2018). From the snowball search for references, no other eligible theses were discovered.

3.1. Background of sexual harassment cases

Sexual harassment can happen anywhere, especially when the victim is inattentive and creates obscene opportunities for the perpetrator. This heinous act is usually carried out in urban areas. Therefore, these communities are vulnerable to sexual threat. Several studies have been carried out in rural areas by Al-Ashzim (2018), Permatasari, 2018, and Hikmah (2020). Permatasari, 2018 carried out unique research, where four cases occurred in urban areas, and one was raised in rural communities. In addition, sexual harassment also existed in private and public spaces such as mass transportation facilities, social-public amenities, educational institutions, and roads (Pauziah, 2018; Hanifah, 2021; Sunti, 2022). Many cases occurred in these places carefully mapped out by the perpetrator, and the victims fell into their traps.

Based on detailed observations, narrow and quiet facilities such as bedrooms, boarding rooms, toilets, and workspaces are potential places that require extra vigilance against sexual harassment (Ilkafah, 2014; Dinda, 2018; Fadilah, 2018). Many cases occurred in these places carefully mapped out by the perpetrator, and the victims fell into their traps. Nevertheless, a known environment does not guarantee one’s safety because several cases occurred in the victims’ homes (Zakaria, 2014; Soraya, 2018). Details about the social settings and locations where this heinous act occurred are shown in Table 3.

3.2. Involvement between perpetrators and victims

Perpetrators and victims of sexual harassment belong to various age groups, and they are usually children (3–12 years), teenagers (13–18 years), and adults (19–64 years old). The interaction between them is not only an attraction due to gender differences, but it also includes homosexuals and fetish, for example, the urge to have sex with children (Huwaiderah, 2011; Nafisah, 2015; Angraini, 2017; Dinda, 2018; Pauziah, 2018; Hikmah, 2020; Purba, 2020; Azami, 2021). In several eligible theses, the majority of the incidents only occurred between the victim and the perpetrator. However, in some circumstances, the sexual predators tend to appear where a perpetrator has harassed many victims, besides, this is usually related to pedophilia (Alifia, 2021). On the other
Sexual harassment cases are real and arise from the perpetrator's awareness. It is usually planned, and the potential victim is lured to the scene. In certain cases, especially in public places, the perpetrator is not known to the victim. They are cigarette traders, buskers, and fellow passengers on public transportation (Karyanti, 2007). From the eligible theses, perpetrators are mainly motivated to satisfy their depraved lust (Table 4). They also dare to engage in this heinous act because they know the victim's carelessness (in attitudes, behavior, even a number of injuries on the person's limbs (Zakaria, 2014; Ali a, 2021)). Some victims tend to feel frozen because, in most circumstances, they are too shocked to speak up (Fathi, 2019). This heinous act leads to the emergence of fear, regret, shame, sadness, and depression. The victims never anticipated it, sexual harassment making them to remain quiet place, abandoned school building, bathroom at a friend's house (Fadilah, 2018); next to the shop (Pauziah, 2018); the victim's house, the perpetrator's house (Ramadhani, 2018); the victim's house, lodging (Purba, 2020); houses, school toilets, boarding rooms (Ali a, 2021); the perpetrator's house (Azami, 2021); KRL Commuter Line (Hanifah, 2021); around Depok train station; deserted/empty train carriages, academic environment, roads, public transportation (Sunti, 2022).

A lack of parental caring is mostly causes sexual harassment involving children or adolescents. It can also be driven by the state of playing biological needs, which has been prolonged. Sexual harassment can be tackled if the victim is willing to disclose it to others, as reported by the majority of the eligible theses. In certain cases, the closest people need to be extremely sensitive because not all victims are willing to speak, however it can be recognized from changes in attitudes, behavior, even a number of injuries on the person's limbs (Dinda, 2018; Soraya, 2018; Purba, 2020; Azami, 2021). They consist of family (parents, brothers, uncles or aunts, grandparents), neighbors, and teachers (Zakaria, 2014; Ali a, 2021). Closest people, especially parents, can continue to investigate these changes, including the victim's socialization pattern with the suspected person (Fadilah, 2018; Pauziah, 2018). Other people is important because they can facilitate the victims, to take appropriate actions such as getting the perpetrators arrested (Permatasari, 2018). Disclosure aids them to get support from local governments, police, schools, social workers, and non-governmental organizations (Al-Ashzim, 2018). Some victims dared to report this case independently to the mediator or the authorities (Ilkafah, 2014; Nafisah, 2015; Azami, 2021). Non-governmental organizations are preferred by victims as mediators. The cases usually get a referral and can be handled by the police, also the victims tend to be stable after the incident. Although, certain victims prefer to keep this case to themselves, unless there are some parties who try to open the veil (Fathi, 2019).

3.3. Cases resolution

Sexual harassment can be tackled if the victim is willing to disclose it to others, as reported by the majority of the eligible theses. In certain cases, the closest people need to be extremely sensitive because not all victims are willing to speak, however it can be recognized from changes in attitudes, behavior, even a number of injuries on the person's limbs (Dinda, 2018; Soraya, 2018; Purba, 2020; Azami, 2021). They consist of family (parents, brothers, uncles or aunts, grandparents), neighbors, and teachers (Zakaria, 2014; Ali a, 2021). Closest people, especially parents, can continue to investigate these changes, including the victim's socialization pattern with the suspected person (Fadilah, 2018; Pauziah, 2018). Other people is important because they can facilitate the victims, to take appropriate actions such as getting the perpetrators arrested (Permatasari, 2018). Disclosure aids them to get support from local governments, police, schools, social workers, and non-governmental organizations (Al-Ashzim, 2018). Some victims dared to report this case independently to the mediator or the authorities (Ilkafah, 2014; Nafisah, 2015). Non-governmental organizations are preferred by victims as mediators. The cases usually get a referral and can be handled by the police, also the victims tend to be stable after the incident. Although, certain victims prefer to keep this case to themselves, unless there are some parties who try to open the veil (Fathi, 2019).
Perpetrators motivation

Satisfy sexual desire (Karyanti, 2007; Huwaidah, 2011; Nafisah, 2015; Anggraini, 2017; Ilkafah, 2014; Dinda, 2018; Pauziah, 2018; Ramadhani, 2018; Soraya, 2018; Fatih, 2019; Hikmah, 2020; Purba, 2020; Hanifah, 2021)

There is a chance (Dinda, 2018; Pauziah, 2018; Fatih, 2019)

Curious (just experimenting) (Ramadhani, 2018; Permatasari, 2018)

Want to feel pleasure; ensure that the relationship between the two parties continues to last (Permatasari, 2018)

Long time no sex with wife, sexual fantasies because they often watch pornographic videos, revenge that leads to a cycle of sexual harassment (Huwaidah, 2011)

Feel close and feel free to do whatever (Azami, 2021)

Sexual disorders (exhibitionism) (Karyanti, 2007)

Using victims with disabilities (disability) (Soraya, 2018)

Victims often wear tight clothes with open tops (Ilkafah, 2014)

Just a fad (joking) (Sunti, 2022)

Involvement between perpetrators and victims

Family (Soraya, 2018), biological father (Zakaria, 2018; Anggraini, 2017; Al-Ashzim, 2018; Hikmah, 2020; Alifa, 2021), step father (Nafisah, 2015; Ramadhani, 2018; Hikmah, 2020), uncles (Huwaidah, 2011; Fatih, 2019), grandfather (Purba, 2020), younger cousin (Ramadhani, 2018)

Unmarried couple (boyfriend or girlfriend) (Ilkafah, 2014; Nafisah, 2015; Anggraini, 2017; Fadilah, 2018; Soraya, 2018; Ramadhani, 2018; Permatasari, 2018; Purba, 2020)

Neighbor (Huwaidah, 2011; Anggraini, 2017; Al-Ashzim, 2018; Dinda, 2018; Fadilah, 2018; Ramadhani, 2018; Soraya, 2018; Hikmah, 2020; Alifa, 2021; Azami, 2021)

Friend (Karyanti, 2007; Fadilah, 2018; Permatasari, 2018; Sunti, 2022)

Colleagues – boss, employer, fellow buskers (Karyanti, 2007; Nafisah, 2015; Fadilah, 2018)

Employees or staff in educational institutions (teachers, security guards) (Fadilah, 2018; Alifa, 2021)

Other people – parents’ colleagues (Zakaria, 2014), friends of the perpetrator (Nafisah, 2015), dad with his neighbor (Anggraini, 2017), son of the owner of the boarding house (Alifa, 2021)

New people are known, including from social media (Al-Ashzim, 2018; Soraya, 2018)

Stranger (Karyanti, 2007; Pauziah, 2018; Fatih, 2019; Hanifah, 2021; Sunti, 2022)

Table 5. The sexual harassment of the victim.

| The act and intensity of sexual harassment | Reference |
|------------------------------------------|-----------|
| Having sex (frequently), some victims become pregnant | Fadilah (2018); Permatasari, 2018; Ramadhani (2018); Soraya (2018); Hikmah (2020); Purba (2020); Alifa (2021) |
| Rape | Huwaidah (2011); Ilkafah, 2014; Anggraini (2017); Fadilah (2018); Soraya (2018); Purba (2020) |
| Raped by more than one perpetrator at the same time | Nafisah (2015); Fadilah (2018) |
| Teasing and saying vulgar (verbal) words, including catcalling | Karyanti (2007); Fadilah (2018); Sunti, 2022 |
| Groping the whole body or sensitive parts (foundlings) such as the waist, buttocks, breasts, or vagina | Karyanti (2007); Nafisah (2015); Anggraini (2017); Fadilah (2018); Ramadhani (2018); Fatih (2019); Azami (2021); Hanifah (2021) |
| Sniffing the head, kissing the face | Karyanti (2007); Soraya (2018); Hanifah (2021) |
| Sticking the genitals (penis), holding the buttocks | Hanifah (2021); Alifa, 2021 |
| Inserting finger or blunt objects into the vagina, thereby causing injury | Anggraini (2017); Huwaidah (2011); Alifa (2021) |
| Sodomy (anal) | Al-Ashzim (2018); Soraya (2018); Hikmah (2020); Alifa (2021) |
| Asking the victim to sit on the perpetrator’s lap | Fadilah (2018) |
| Having violent sex | Pauziah (2018); Hikmah (2020); Alifa (2021) |
| Inviting and forcing the victims to watch porn | Karyanti (2007) |
| Flapping the victim without consent | Karyanti (2007); Dinda (2018) |
| Exhibitionism | Karyanti (2007); Fatih (2019) |
| Forced to suck the penis | Anggraini (2017) |
| Taught to play (hold) with the perpetrator's penis and ass | Anggraini (2017) |
| Forceful sex | Zakaria (2014) |

4. Discussion

Eligible theses that discussed sexual harassment were obtained from social and humanities study programs (departments), mainly came from Islamic Guidance and Counseling (45%), Social Welfare (20%), Psychology (10), Sociology (10%), Public Health (5%), Family Law (5%), as well as Islamic Faith and Philosophy (5%). This situation illustrates that the study is multidisciplinary, interdisciplinary, and transdisciplinary. Even though in the academic context, these studies have not yet received full support due to the clear separation of scientific fields through formal regulations implemented by the Indonesian Ministry of Education, Research and Technology (Fitri et al., 2020). Handling sexual harassment requires the adoption of approaches from various related and allied scientific fields, both in pre and post-events against victims, the surrounding environment, also the perpetrators. It is also important to change perspectives and to be more concerned about the victims, because patriarchal societies tend to blame them, they provided the opportunity for perpetrators to commit these heinous acts (O'Donohue et al., 1998). A study carried out by Hanifah (2021), stated that politeness, and loose clothing also does not guarantee one’s freedom from sexual harassment. The factor within the perpetrator is the main control this phenomenon (Shakeshaft, 2004; Greathouse et al., 2015). Irrespective of this, creating a safe environment is a shared responsibility of all societal elements and needs to be supported by tiered formal regulations (Wurtele, 1987; Barker, 2017; Sustiana, 2021). The formation of a task force at the school

The ability to handle sexual harassment by the victims and those around them is caused by several motivations, including 1) the family finds it difficult to accept such act, feels hurt, and acts outrageous (Ilkaah, 2014; Nafisah, 2015; Anggraini, 2017; Fadilah, 2018; Soraya, 2018; Ramadhani, 2018; Permatasari, 2018; Alifa, 2021; Azami, 2021); 2) reports the incident because it has been troubling them (Fadilah, 2018; Permatasari, 2018); 3) to receive special assistance and treatment (Al-Ashzim, 2018; Ramadhani, 2018); 4) the victim was physically injured, or even got pregnant (Purba, 2020; Alifa, 2021); 5) feeling helpless (Nafisah, 2015); 6) loss of valuables that were taken away by the perpetrators (Anggraini, 2017). Sexual harassment always leaves an imprint on the victim, although its extent differs depending on personal situation, post-case handling, and the level of trauma. Based on these studies, there are many trauma handling and coping strategies of the victims as shown in Table 7. Unfortunately, only four theses stated that these perpetrators are legally processed by the police (Anggraini 2017; Soraya 2018; Permatasari, 2018; Purba 2020).
investigation, including the case of lovers or married couples (Refinetti, 2018).

The victim-oriented resolution really requires sensitive people around, especially parents. They play a significant role in the case of children and adolescents. Victims of sexual violence often exhibit somatic complaints without any organic basis. According to Kendall-Tackett et al. (1993), and Sweeting et al. (2022), both men and adults experience trauma, increasing competence among parents regarding sexuality education plays a role, although this has challenges such as educational background and society. Parents also need to teach sexuality education to their children, they capable to build intimate and open communication and families who can interact more intensively. Victims also need to be at alert attitude (Hill and Kearl, 2011; Bondestam and Lundqvist, 2020; Adams et al., 2021). It is equally important, for one always need to be at alert attitude (Hill and Kearl, 2011; Bondestam and Lundqvist, 2020; Adams et al., 2021). It is equally important, to provide trauma care for victims. This need to be able to stop imitating behavior that is not only carried out by psychiatrists, but also by parents and families who can interact more intensively. Victims also need to continuously receive attention in the form of litigation and non-litigation assistance to get the ideal coping strategy.

5. Conclusion

The SLR focuses on sexual violence by utilizing undergraduate theses obtained from a library repository at the Islamic campuses (UIN) spread across Indonesia. The criteria for determining the theses were clearly defined. Therefore, the discussion remains focused and detailed. There are 23 UIUs in Indonesia, but only six are open-access repository. However, in the end only 20 theses met all the criteria. The assessment process refers to certain criteria such as theses originating from the social sciences and humanities which present case studies, including background, setting of the incident in both urban or rural environments, as well as specific places, motivations, and interactions between victims and perpetrators. In addition, the theses contain efforts and strategies for solving these cases. The majority of the studies on sexual harassment were obtained from Java, such as UIN Jakarta (nine theses), UIN Semarang (four theses), and UIN Surabaya (three theses).
Sexual harassment can occur anywhere, however it is rampant in urban environments and sometimes executed in a quiet place far from social activities, such as roads, public amenities, and empty house. Furthermore, this crime can be committed by close family members, lovers, neighbor, or even strangers. Most of the victims are children and adolescent, while the perpetrators are generally adults, some teenagers, lovers, neighbor, or even strangers. Most of the victims are children and sometimes executed in a quiet place far from urban environments.

Declarations

Author contribution statement

All authors listed have significantly contributed to the development and the writing of this article.

Declaration of interests

The authors declare no conflict of interest.

Data availability statement

Data will be made available on request.

Funding statement

This work was supported by the Faculty of Social Sciences Education (FPIPS) and Universitas Pendidikan Indonesia in 2022 through “program publikasi ilmiah bereputasi” on behalf of the first author.

Additional information

No additional information is available for this paper.

Acknowledgements

The authors are grateful to the library management of UIN Syarif Hidayatullah Jakarta, UIN Walisongo Semarang, UIN Sunan Ampel Surabaya, UIN Alauddin Makassar, UIN Ar-Raniry Aceh, and UIN Raden Fatah Palembang for providing quality research materials. The authors are grateful to the library management of UIN Syarif Hidayatullah Jakarta.
