Additional file 3

The matrix domain contributes to the nucleic acid chaperone activity of HIV-2 Gag

Katarzyna Pachulska-Wieczorek, Leszek Błaszczyk, Marcin Biesiada, Ryszard W. Adamiak and Katarzyna J. Purzycka

MA proteins of HIV-1 (PDB id. 2HMX) (A) and HIV-2 (PDB id. 2K4E) (B) represented by their molecular surfaces. A green arrow denotes the N terminus. Electrostatic potentials were calculated using Adaptive Poisson-Boltzmann Solver (APBS) [1] and visualized using PyMOL. Additional movie file (Additional File 4) presents this in more detail.
